

MANUEL TECHNIQUE POUR
L'AMELIORATION DES ARCHITECTURES RURALES EN STRUCTURE PORTEUSE EN BOIS
DANS LE DEPARTEMENT DU SUD EST D'HAÏTI

ONU HABITAT
POUR UN MEILLEUR AVENIR URBAIN

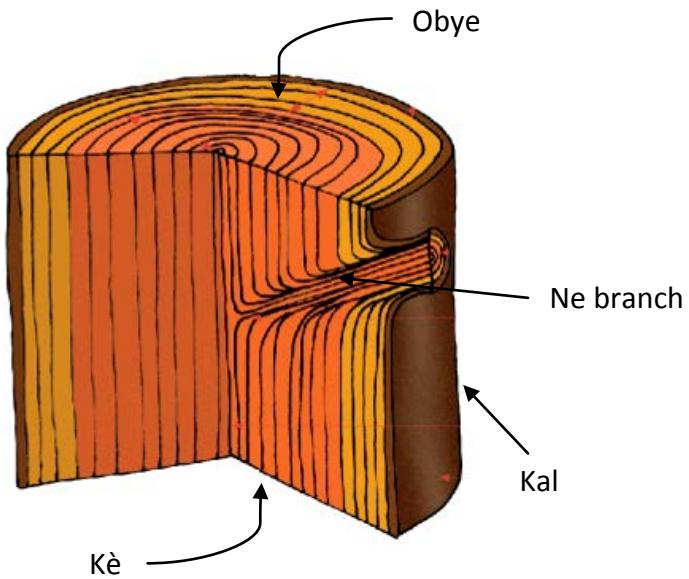

Materyo lokal yo

- 6.1 – Bwa**
- 6.2 – Sab ak gravye**
- 6.3 – Wòch**
- 6.4 – Kol mòtye ak latè**

6.1 – Bwa

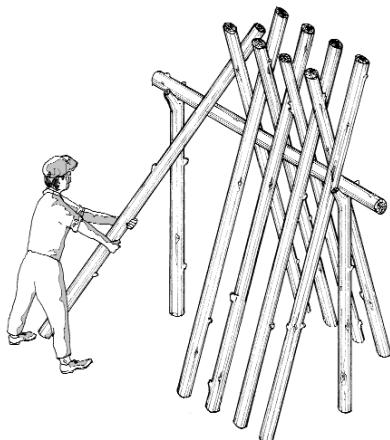

Propriyete yo

Obye a se parti ki mwen rezistan ak mwen dirab pase kè a. Poudbwa pike li pi fasil. Nou dwe retire pati sa a pou fè poto yo.

Chechaj

Li empòtan pou bwa cheche byen avan nou itilise'l pou pèmèt li jwenn dimansyon final li.

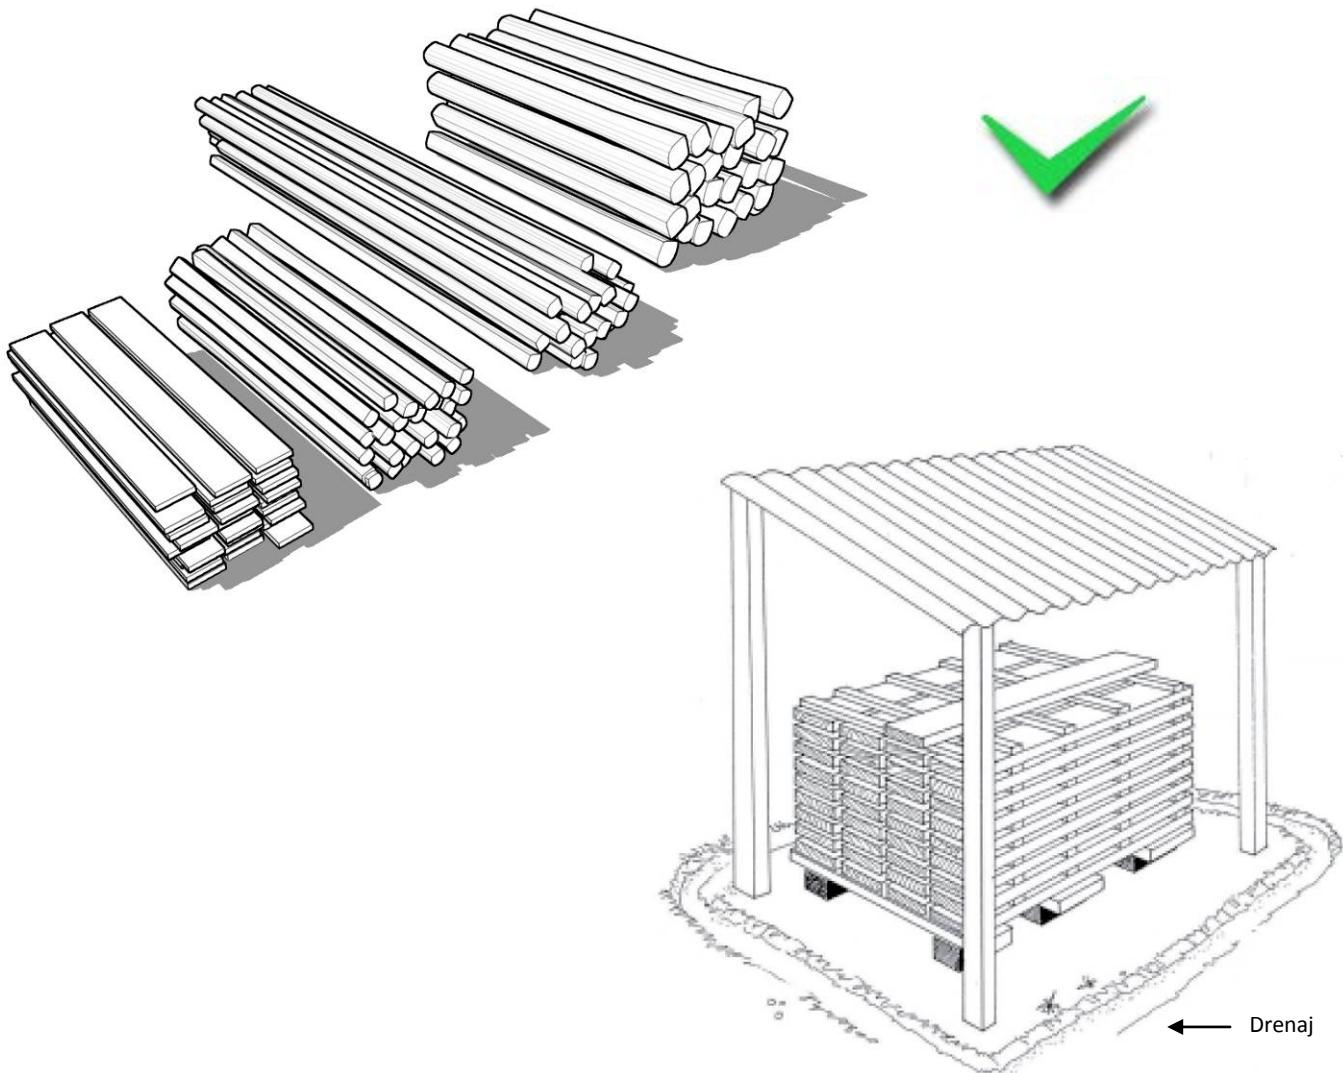

Preparasyon pyès bwa yo ak ti

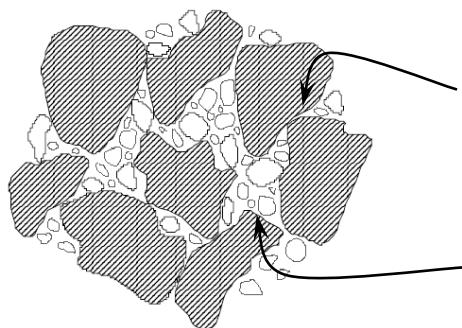

Jesyon stok bwa

- Klasifikasyon pa gwosè, fòm ak kalite bwa
- Estoke lwen imidite (lapli, dlo nan tè) e byen vantile ant chak pyès bwa

6.2 – Sab ak gravye

SAB AK GRAVYE SE SKELET MÒTYE AK BETON YO

Gravye : gren ki 5 à 20 mm

Sab : gren ki 0 à 5 mm

KALITE SAB AK GRAVYE

Ki roulé...

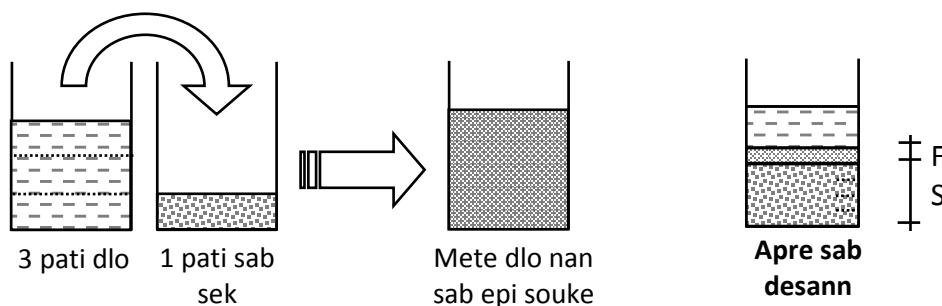

Tif

Ki moulen ou kraze

KANTITE « FINN » OU BYEN ÀJIL NAN SAB

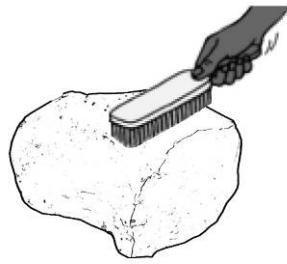

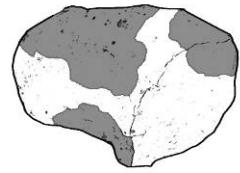

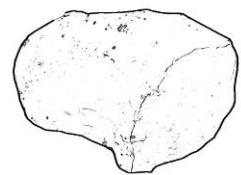

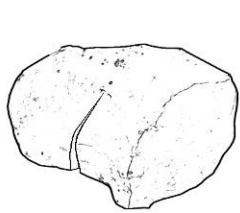

Pwòpte sab

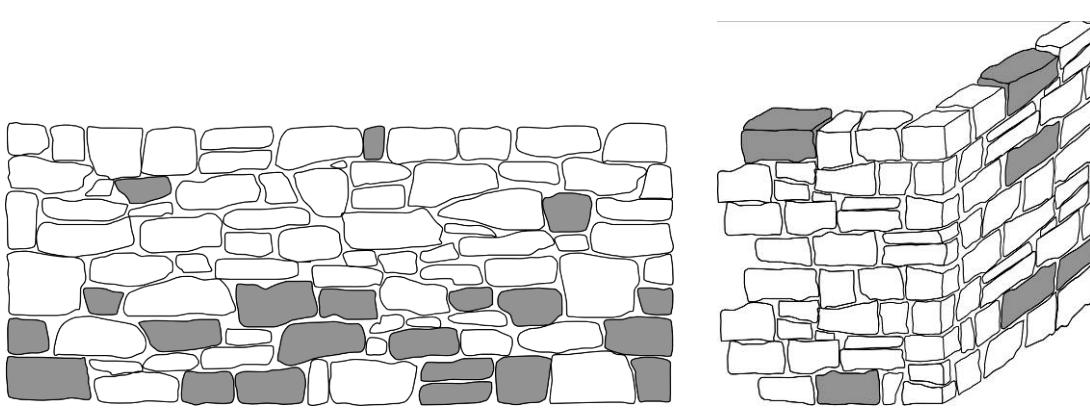

- | | | |
|-----------|---------------|--------------------------------|
| $F > 3 S$ | \Rightarrow | Sab ki gen anpil « grès » |
| $F < 8 S$ | \Rightarrow | Sab ki "mèg" ou byen ki "pwop" |

6.3 – Wòch

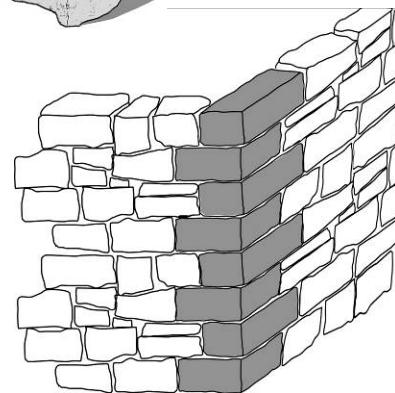

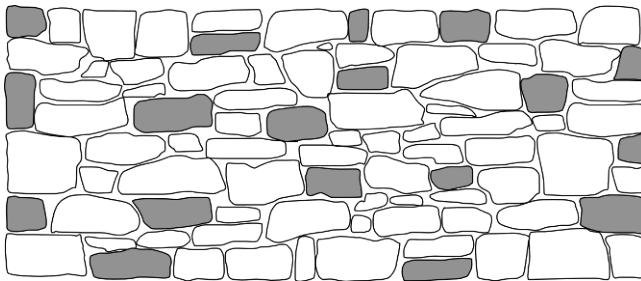

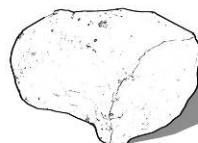

Byen chwazi wòch yo – Resiklaj

- Refize wòch ki fragil ou ki gen fant
- Netoye wòch yo pou yo ka kole pi byen avec mòtye lè nou itilize yo

Jesyon stok wòch yo

- Stokaj o azà
- Wòch yo ki monte owazà nan mi a malgre kalite yo ak pàti ki pi frajil nan mi a (kwen yo, baz la)

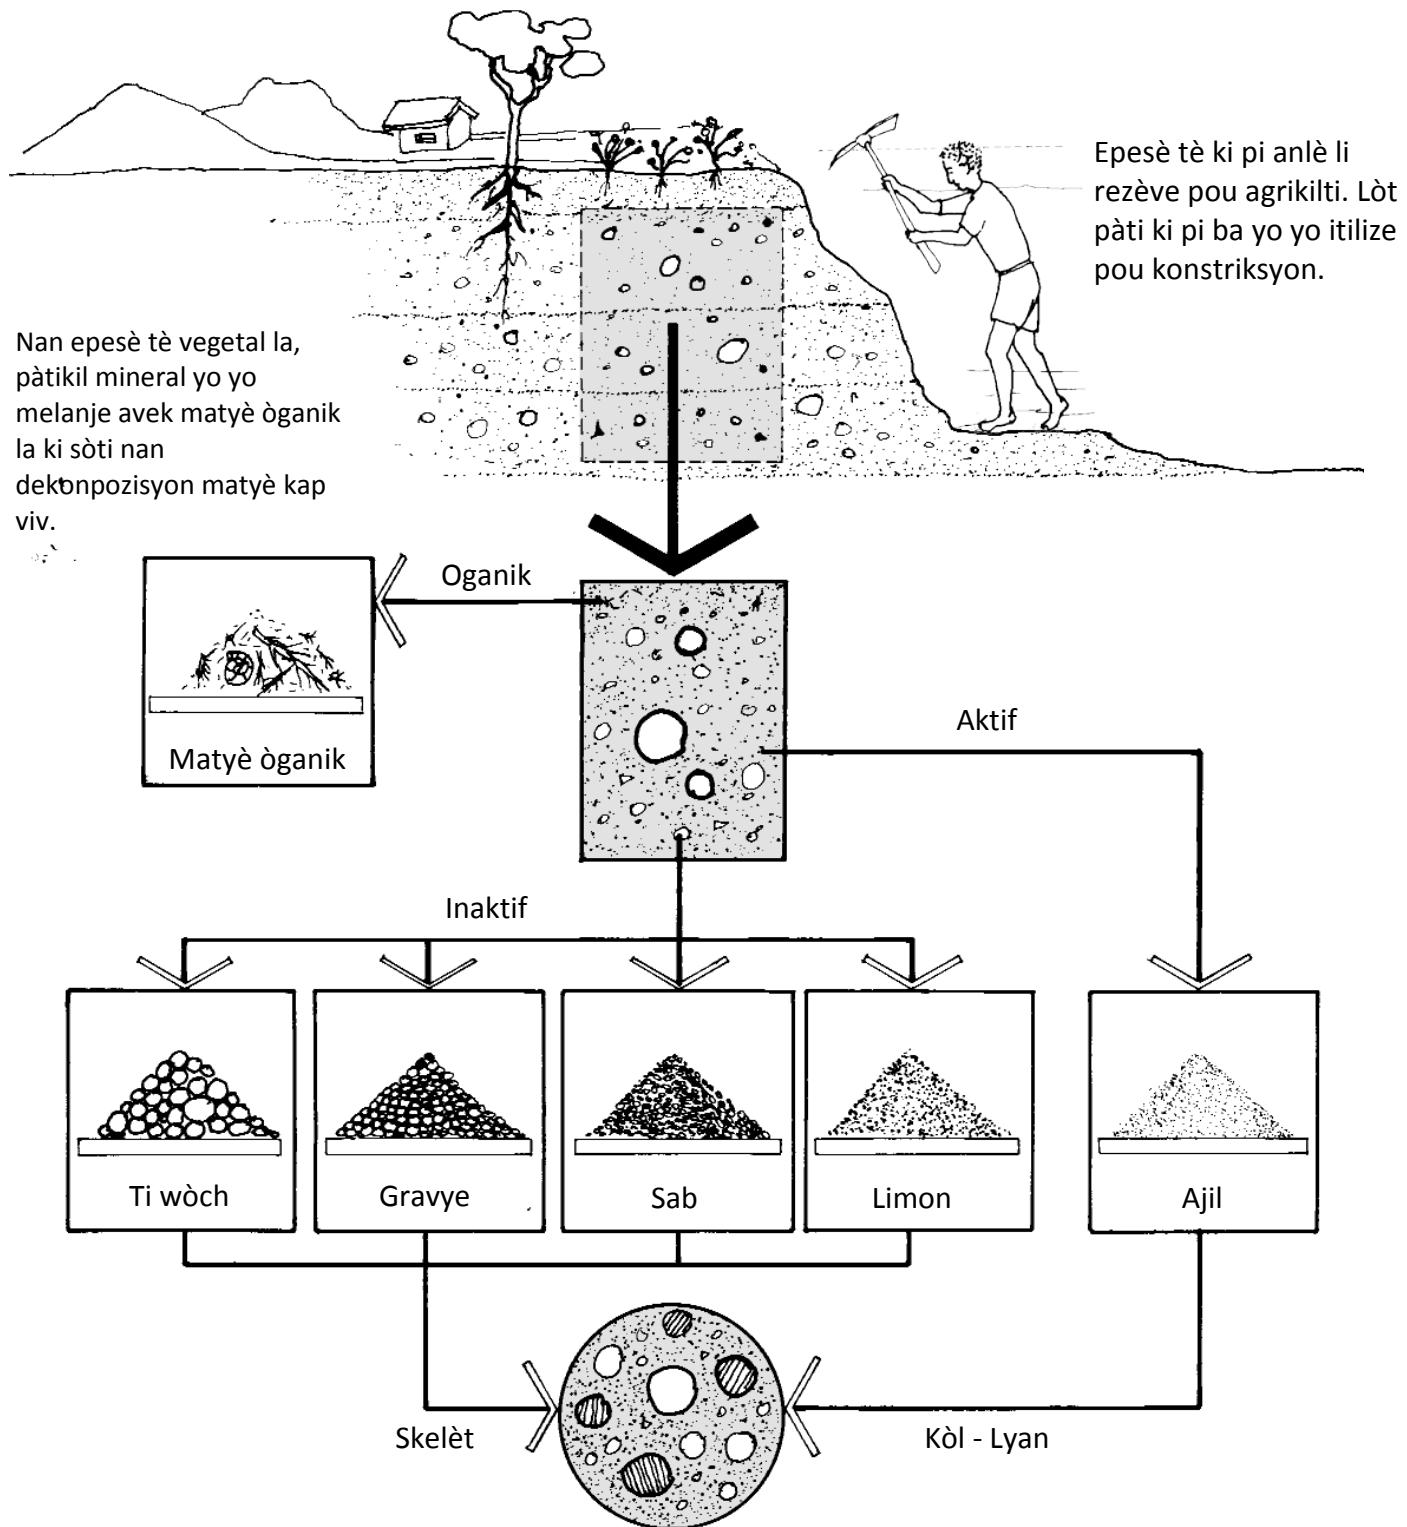

Jesyon stok wòch yo

- Stokaj pa gwosè, fòm ak kalite wòch yo
- Distribisyon wòch nan diferan pozisyon nan mi an selon karakteristik yo (wòch pi byen yo nan kwen yo)

6.4 – Kol mòtye ak latè

Sa ki anndan tè a

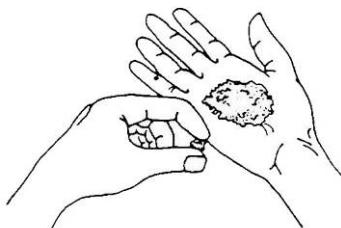

Orijin: Latè, tankou yon materyo, sòti nan ewozyon wòch orijinal la. Wòch sa a dezentegre pou bay patikil mineral divès kalite gwosè, ti wòch ou memm àjil.

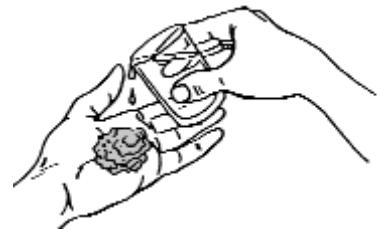

Latè : tès idantifikasyon yoJE – TOUCHE – SANTI

Objektif : Idantifye gwosè ak kantite gren yo nan latè a. Sa vle di granularite sol la.

San dlo

Avek dlo

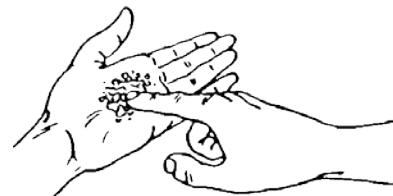

**Rezulta yo**

Presans **matyè òganik** - lage yon sant (mwazi)

Tè **sablèz** – Tè ki graj, frajil, li kole yon ti kras

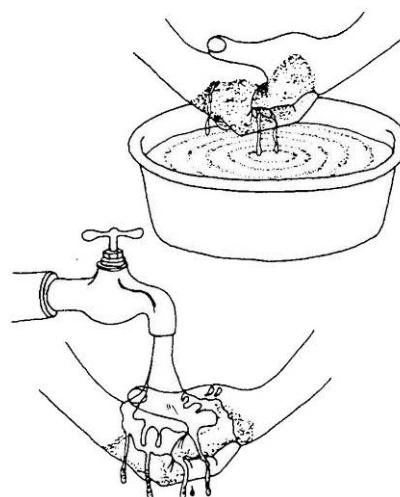

Tè **limonèz** – tè finn, fasil pou kraze nan yon poud, li kole

Tè **àjilèz** - difisil pou kraze, li pa fonn nan dlo fasil, li kole e li finn anpil

LAVE MEN YO

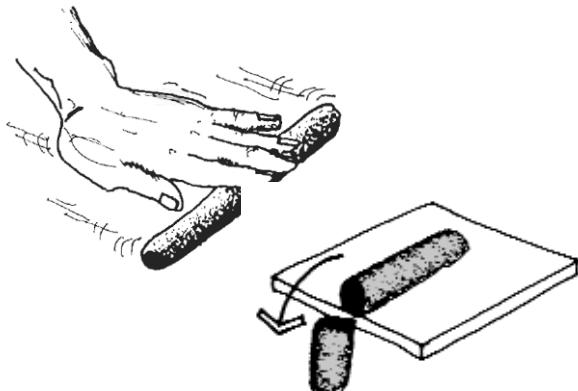

Mete tè a likid sou tout men yo epi lave men yo DOUSMAN avek dlo.

Tè àjilèz se tankou « savon » e li difisil pou rense li. Tè limonèz li tankou farin. Tè sablèz li koule rapid ant dwèt yo e li fasil pou rense li.

Latè : tès idantifikasyon yo**TES SIGA**

Objektif : Pou detèmine si tè a kole byen. Tcheke si kantite làjil nan tè a bon.

- Retire patikil yo ki pi gwo pase 5 mm (gravye)
- Mete dlo e brase tè a. Melanj sa a pa dwe jwenn men sal.
- Kite tè a 30 mn pou àjil ka reyaji.
- Sou yon planch, fòme yon sigà 3 cm nan dyamèt ak 30 cm nan longè.
- Dousman pouse sigà a nan vid.
- Mezire longè a nan mòso ki tonbe.
- Repete tès sa a 3 fwa...

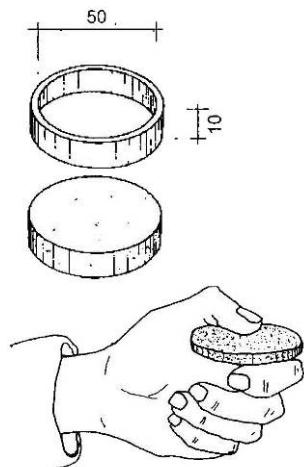

Rezulta yo

Mwens pase 5 cm : **Tè ki sablèz anpil**

Plis pase 20 cm : **Tè ki àjilèz anpil**

TES « PASTIY »

Objektif : Teste rezistans a sek. Mezire kantite kontraksyon àjil yo.

- Kolekte melanj ki sòti nan tès sigà a.
- Fòme 2 tablèt (« pastiy ») avek yon mòso tib PVC
- Lè tablèt yo vin chech :
 - ✓ Gade si gen kontraksyon (tablèt la vin pi piti)
 - ✓ Evalye rezistans tablet yo : eseye kraze li ant dwet pa ou yo

Rezulta yo

Pa gen kontraksyon, li fasil pou kraze li nan yon poud

Tè sablèz

Gen kontraksyon, li fasil pou kraze li nan yon poud

Tè limonèz

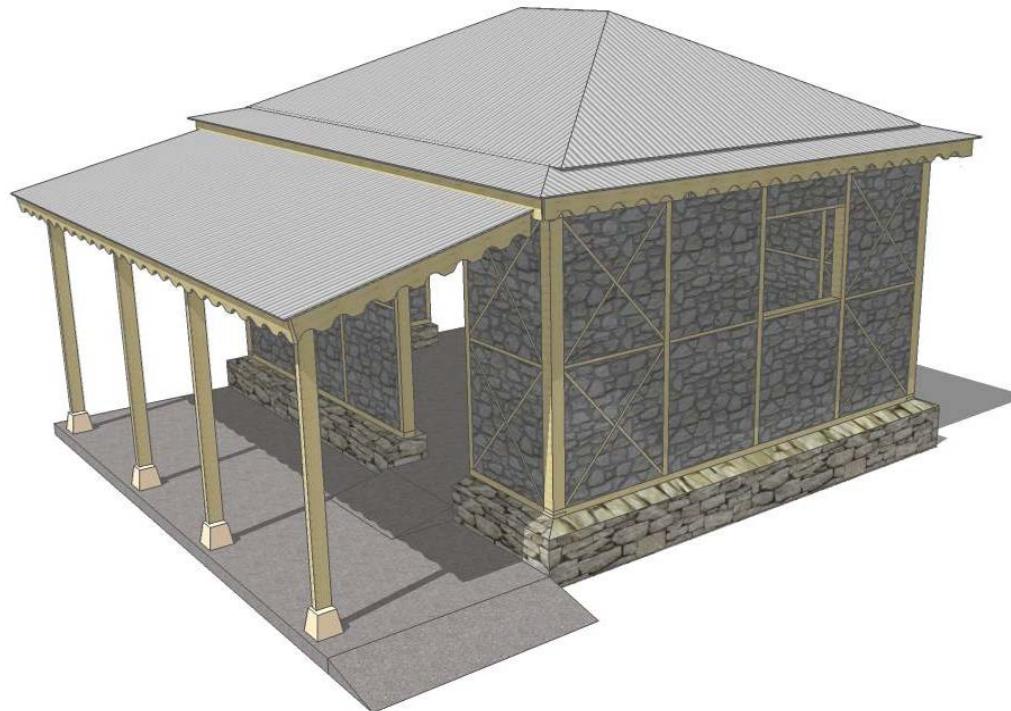

Anpil kontraksyon, li difisil pou kraze li nan yon poud

Tè àjilèz

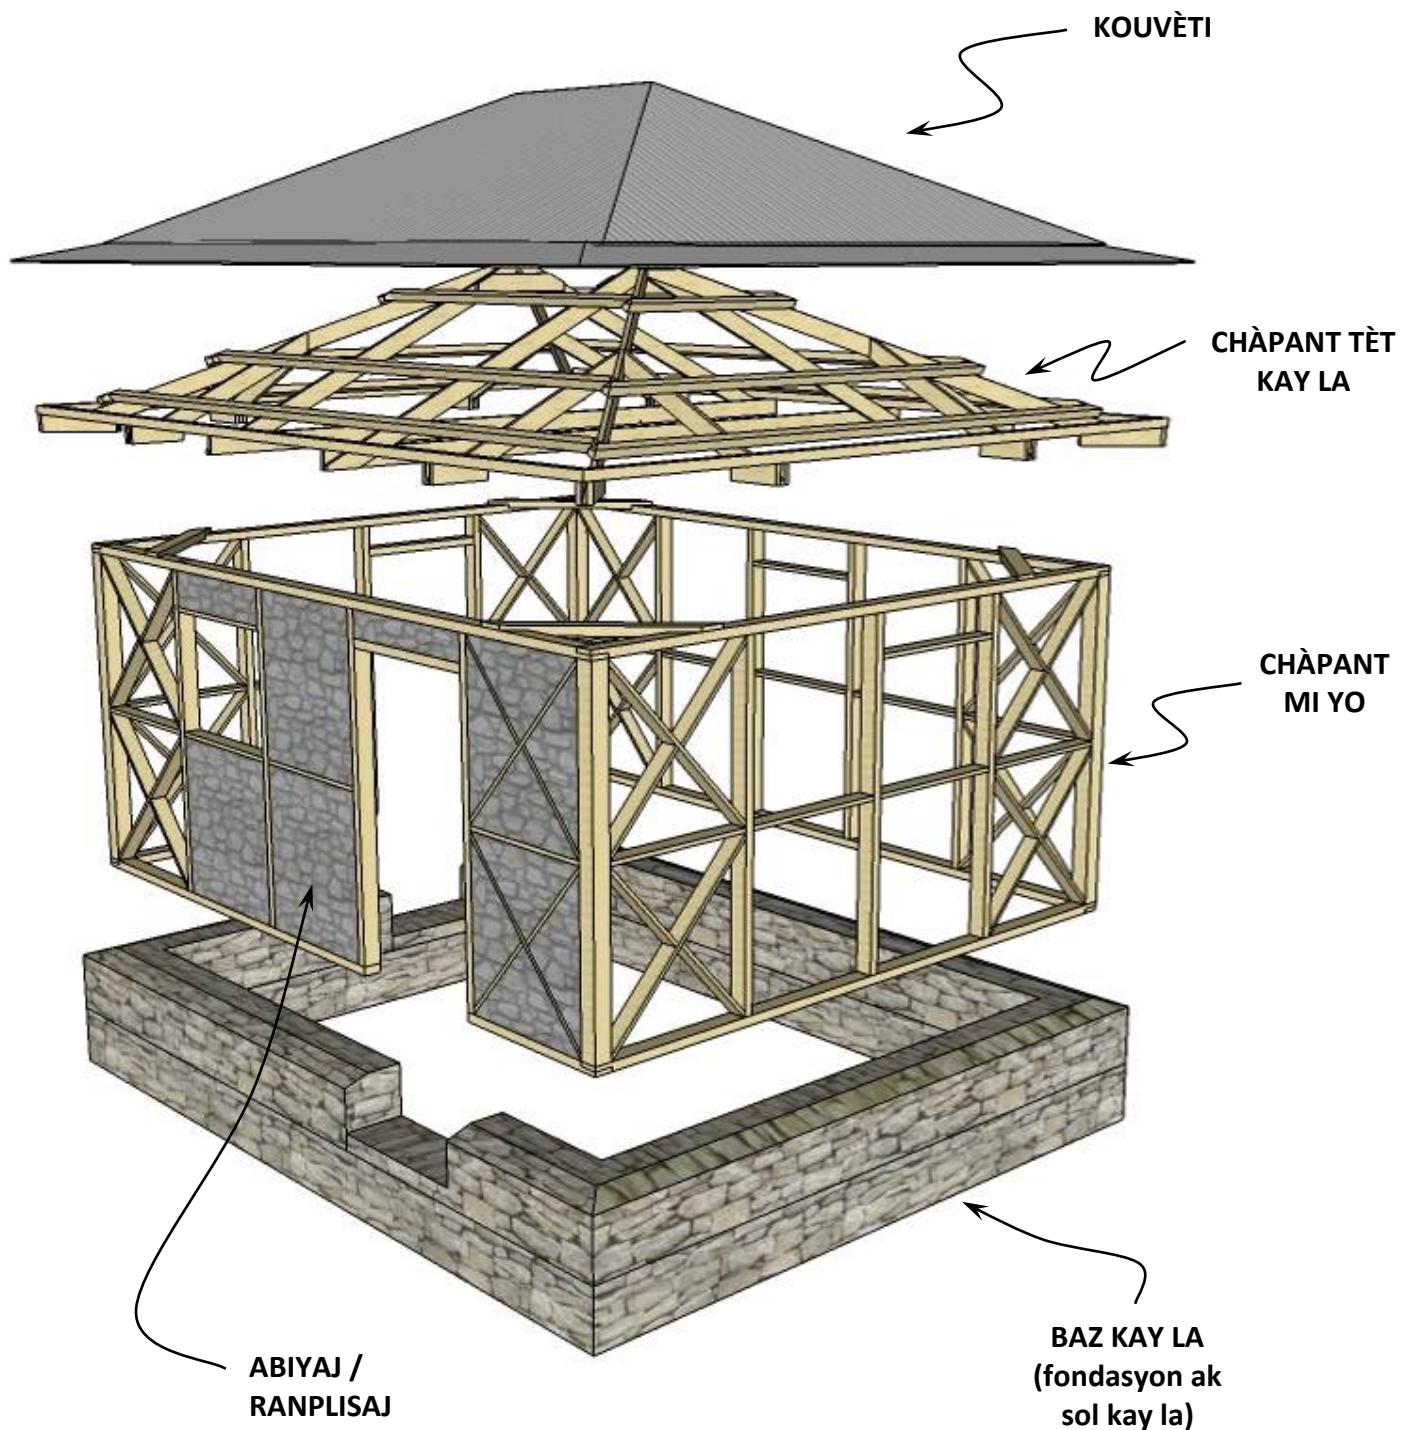

Sistèm konstriksyon

- 7.1 – Sistèm konstriksyon – Deskripsyon jeneral**
- 7.2 – Trase kay la**
- 7.3 – Mòtye ak beton yo**
- 7.4 – Masonri ak wòch**
- 7.5 – Fondasyon**
- 7.6 – Solay kay**
- 7.7 – Chàpant an bwa pou mi yo**
- 7.8 – Ranplisaj / Abiyaj mi yo**
- 7.9 – Tèt kay la**
- 7.10 – Tretman sifàs**
- 7.11 – Tretman alantou kay la**

7.1 – Sistèm konstriksyon – Deskripsyon jeneral

Diferan pàti nan kay la

7.2 – Trase kay la

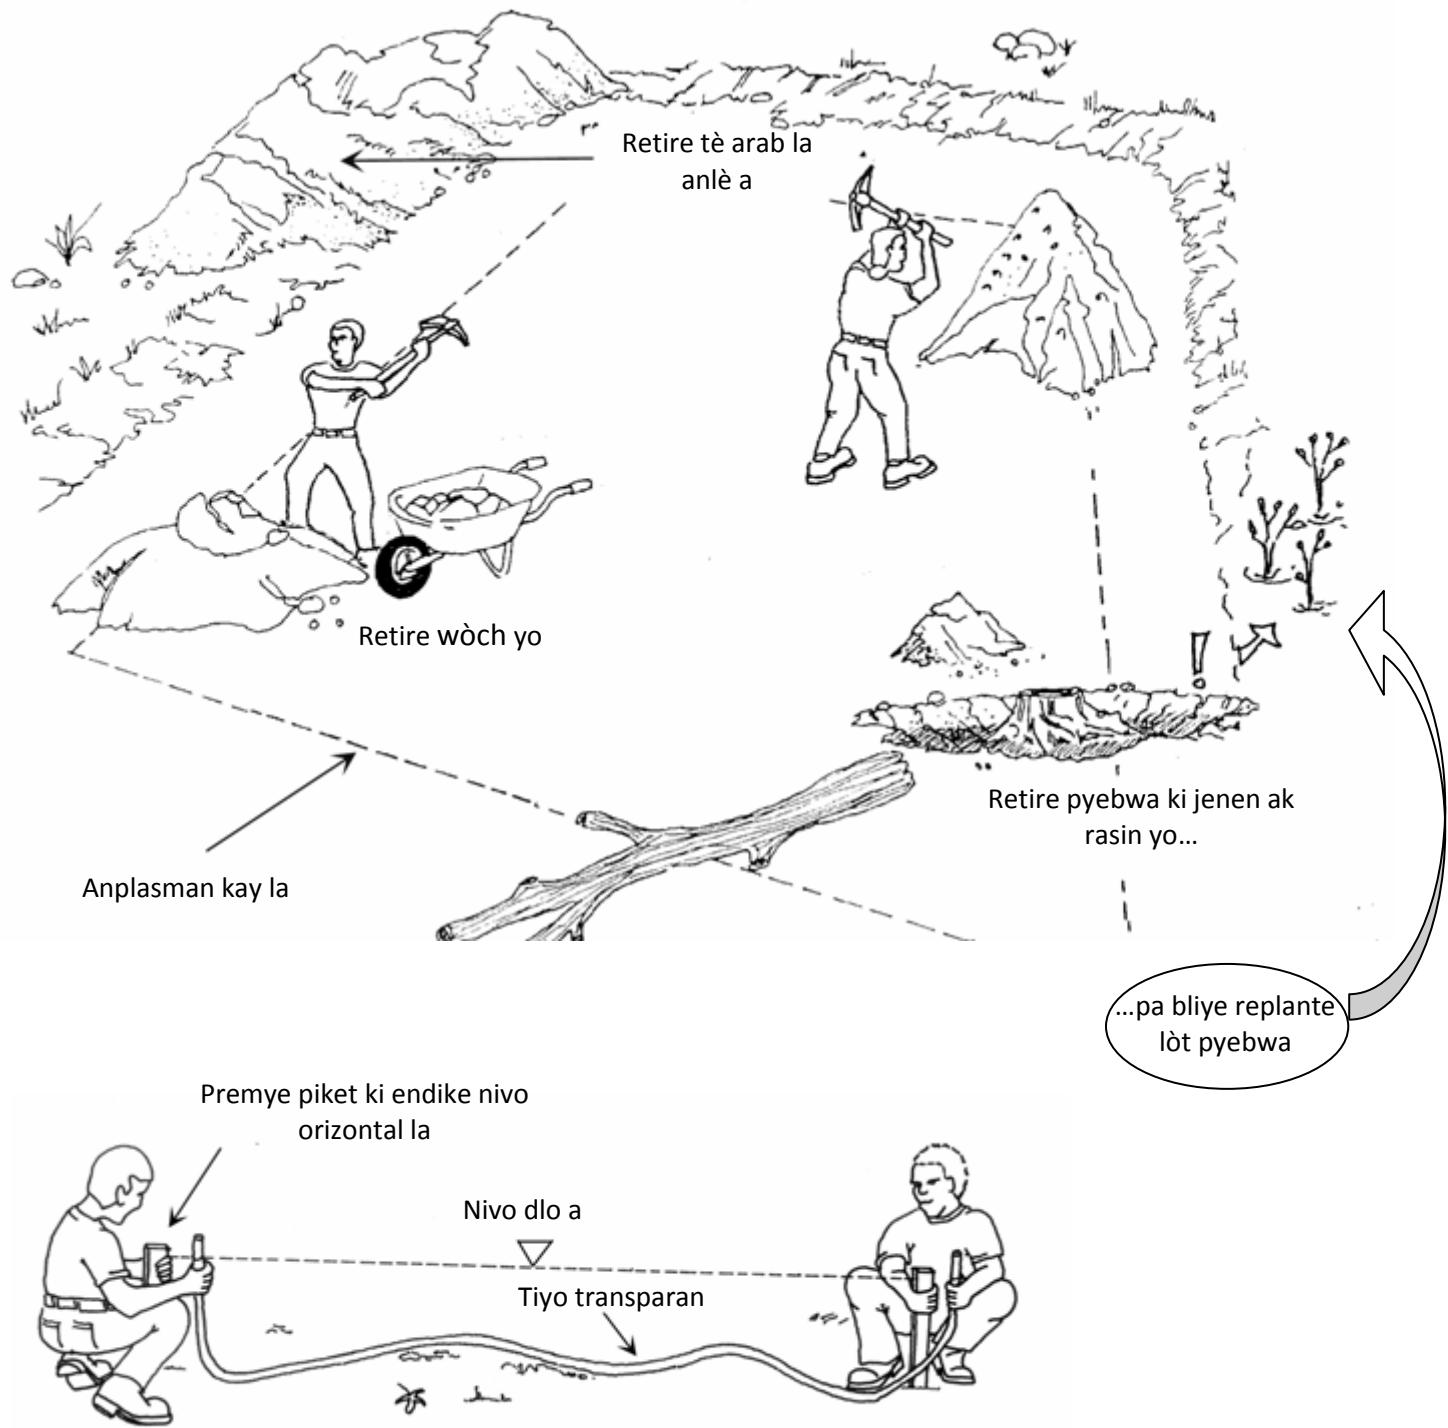

Tcheke dyagonal yo

Mete tout kwosbà yo menm nivo avek yon tiyo dlo transparan

Preparasyon teren an : Netwaye ak trase nivo yo

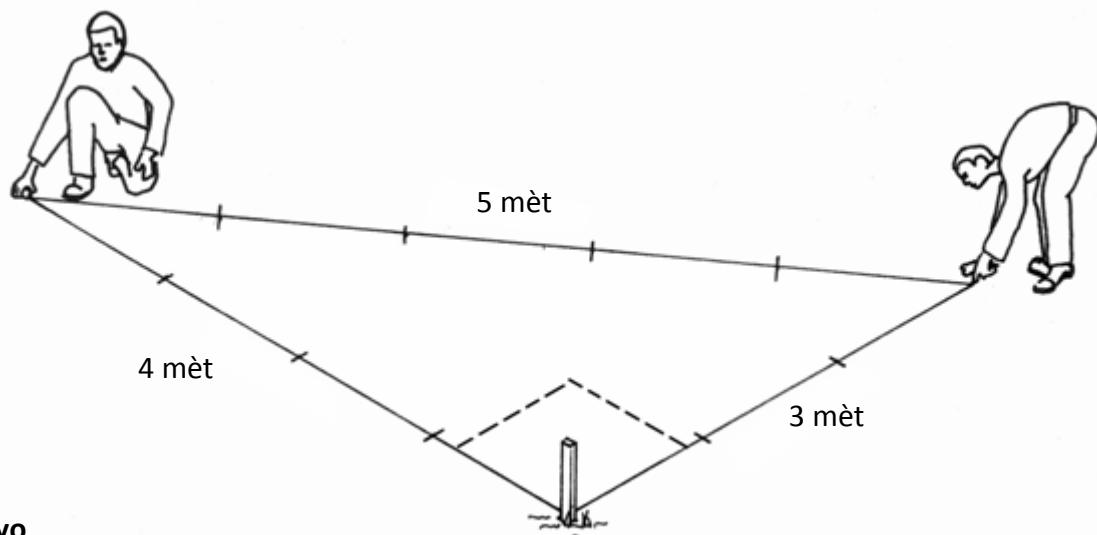

Anvan w kòmanse konstriksyon an, teren an yo dwe pwòp ak menm nivo, pou plase kay la byen ak pou stoke materyo yo.

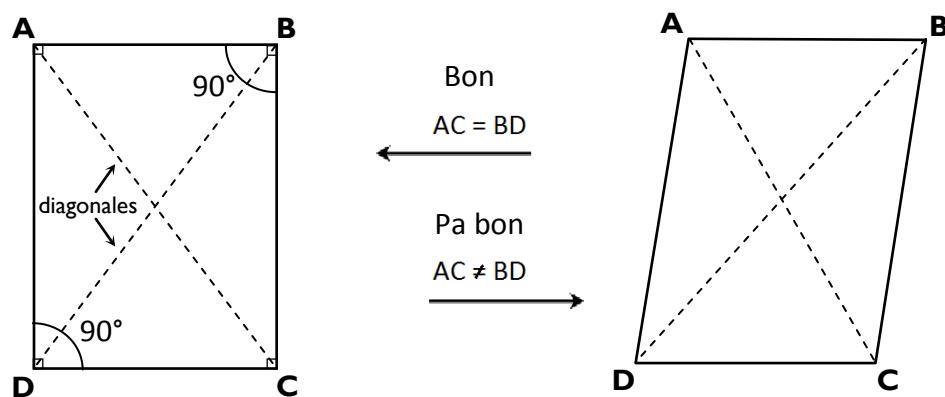

Sèvi ak yon tiyo transparan an, li trè fasil pou pote nivo orizontal la sou tout lot pwen nan teren an.

Trase a tè

Règ 3-4-5 – Mete kay la ekè

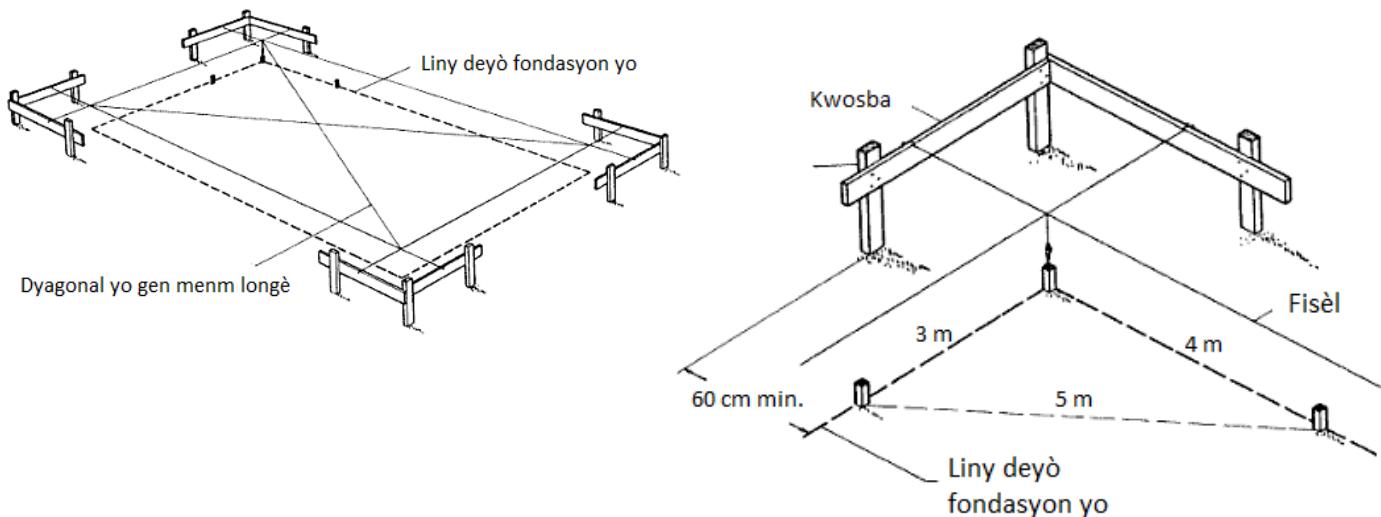

Tcheké diagonal yo

Ki jan poul yé : $AB = DC$ et $AD = BC$

Poz kwosbà yo

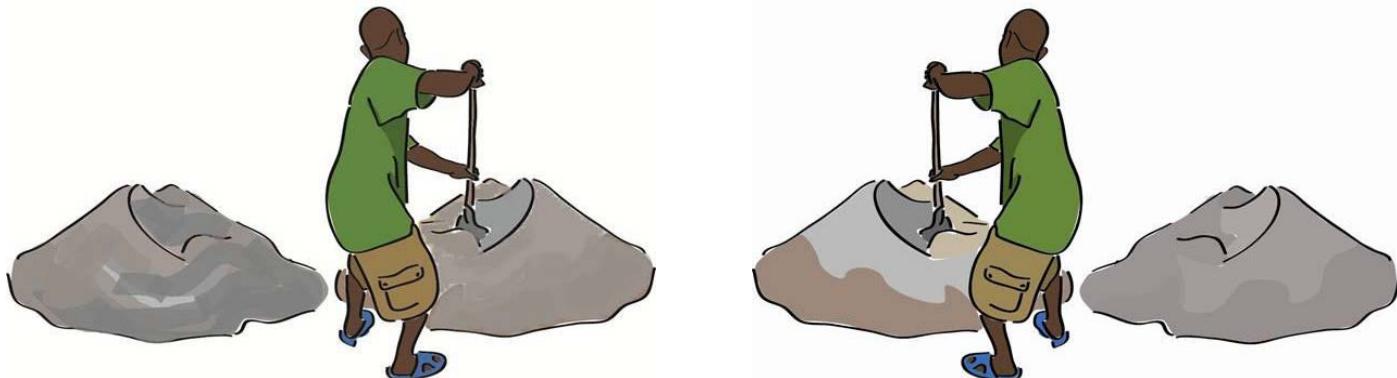

7.3 – Mòtye ak beton yo

Bon jan teknik pou brase beton ak mòtye

Fè yon pil ak gravye, sab ak siman (oubyen lacho). Pa ajoute dlo.

Brase epi deplase pil la pèl pa pèl, **2 fwa**.

Lè tout gravye, sab ak siman byen melanje, nou ka ajoute dlo.

Epi, rebrase tout pil la ankò ansanm, **2 fwa**.

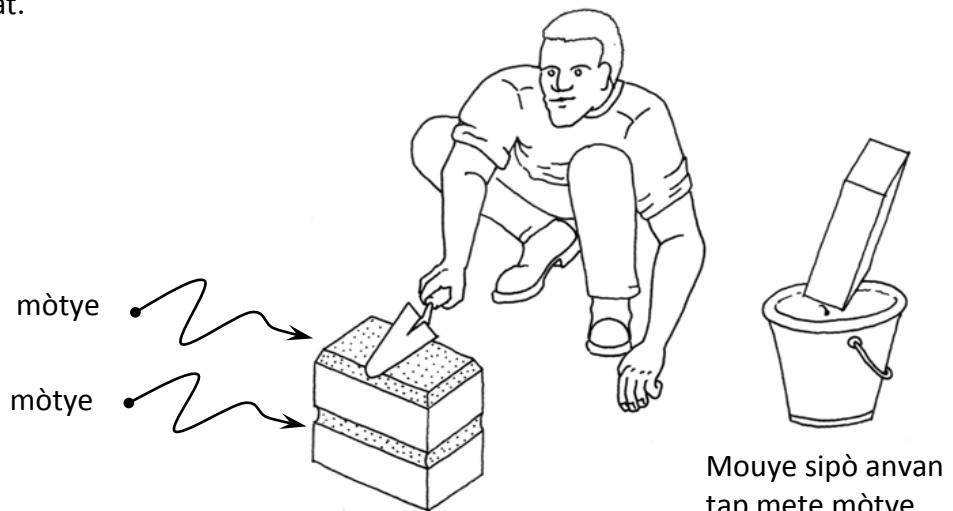

Tès mòtye tè

Objektif : Pou detèmine melanj la ki pi bon avek latè, sab ak / oswa fib (egzanz : pit).

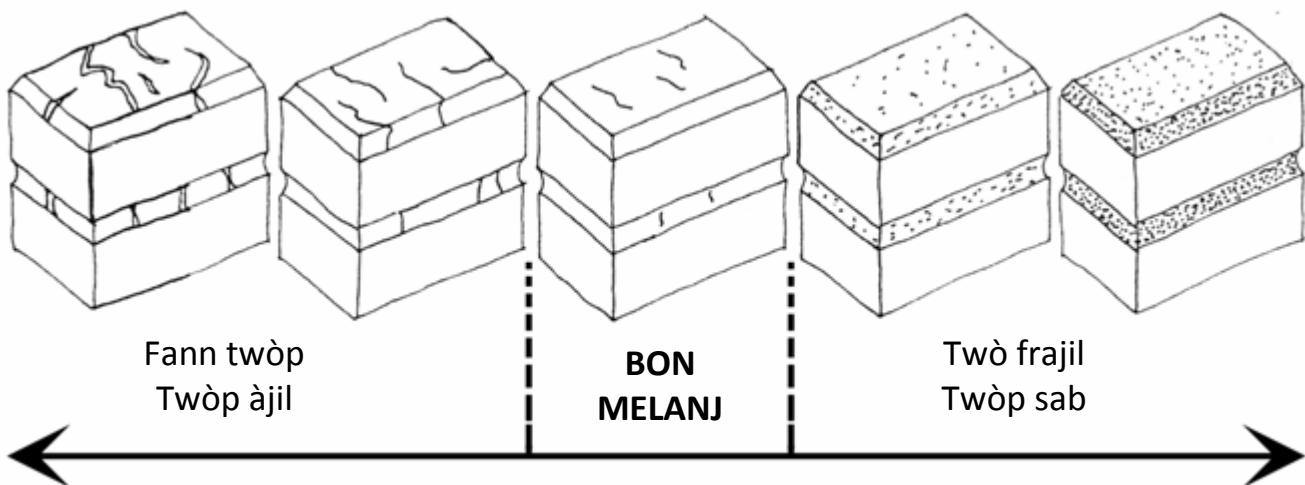

- Prepare mòtye ki gen melanj differan : pwopòsyon differan nan sab epi avek fib ou pa. Mete mòtye sou 1 oswa 2 brik, oswa 2 wòch ki plat.
- Tann pou mòtye byen cheche.

Egzanz melanj :

- Latè a sèlman.
- 4 Tè / 1 Sab
- 4 Tè / 1 Sab + fib
- 2 Tè / 1 Sab
- 2 Tè / 1 Sab + fib
- 1 Tè / 1 Sab
- Etc.

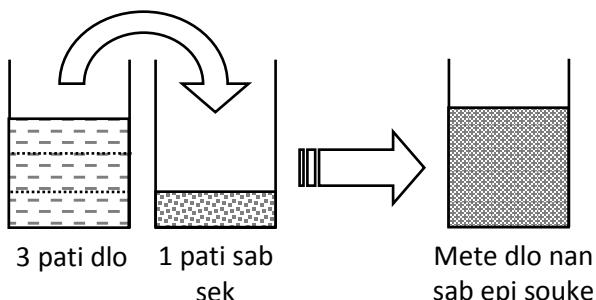

**Rezulta yo :**

Chwazi mòtye ki di e ki gen ti kras fant. Se mòtye sa a kap kole pi byen.

**Tès melanj sou wòch ki plat yo****Preparasyon mòtye avek pit**

Tès melanj mòtye lacho

Pwopòsyon pàtikil finn nan sab la

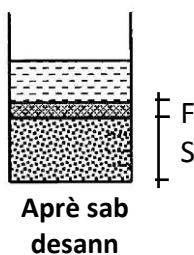

Yon sab ki « gra » li pi bon pase yon sab ki two pwòp :

- Mòtye gen plis souplès, pi fasil pou travay.
- Li amelyore rezistans kont dlo.
- Li posib pou finn yo kolore mòtye.
- Nou mwens bezwen mete lacho.

Atansyon :

Twòp pàtikil finn koze fant.

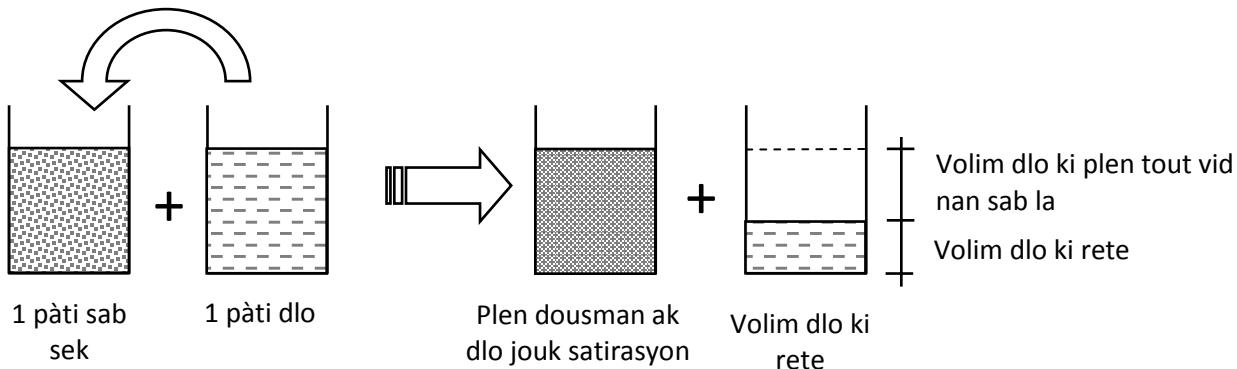

Tès kantite finn :

Rapò F/S = 1/4	\Rightarrow	Bon
Rapò F/S = 1/3	\Rightarrow	Twò « sal »
Rapò F/S = 1/5	\Rightarrow	Twò « pwòp »

Pou konnen pwopòsyon lacho nou bezwen mete : mezire pwopsyon vid ki gen nan sab la

Lacho ta dwe ranpli volim ki vid nan sab la. Pou mezire kantite vid ki nan sab la mete dlo nan yon volim sab jouk li pa gen plas ankò pou dlo a epi kalkile ki kantite dlo ki plen twou vid ki genyen yo nan sab la :

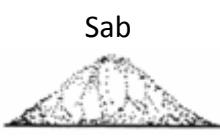

➤ Pwopòsyon vid nan sab la bay pwopòsyon lacho nou bezwen.

Tablo ki bay endikasyon pou kek melanj posib (men tès yo obligatwa menm !)

	Lacho	Simant (pou mòtye batà)	Sab
Mòtye pou masonri wòch	1 vol.	(1/3 vol.)	3 à 7 vol. depann kalite sab la
Rejwentwaman wòch	3 vol.	(1/3 vol.)	3 à 4 vol.
Mòtye pour krepi	1 vol.	(1/3 vol.)	2 à 4 vol.
Mòtye pou andwi	1 vol.	/	4 à 7 vol.

Mòtye ak beton siman yo : Melanj**MOTYE SIMAN YO**

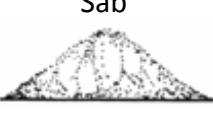

Pase sab nan crib, si nou bezwen pou itilisasyon nap fè. Sab dwe byen pwòp.

			Ekivalans apeprè an kilo siman pou chak m ³ sab
Mòtye latè stabilize	1 vol.	8 vol. (<i>tè oubyen melanj tè-sab</i>)	150 kg/m ³
Mòtye pou masonri wòch (Atansyon : pas itilize pou ranpli mi ranplisaj an wòch yo)	1 vol.	6 vol.	250 kg/m ³
Mòtye pou monte blok siman yo	1 vol.	5 vol.	300 kg/m ³
Mòtye pou krepisaj blok siman yo	1 vol.	4 vol.	350 kg/m ³
Mòtye pou andwi blok siman yo	1 vol.	5 vol.	300 kg/m ³
Mòtye pou pàke beton an	1 vol.	4 vol.	350 kg/m ³

BETON SIMAN YO

Gravye diamèt 5/40 mm : se skelèt beton an, yo nan pwopòsyon 2/3 nan volim total la.

Sab diamèt 0/5 mm : yo plen vid ki nan gravye, yo nan pwopòsyon 1/3 nan volim total la. Yo dwe byen pwòp.

				Ekivalans apeprè an kg siman pou chak m ³ sab
Beton fonsaj	1 vol.	4 vol.	6 vol.	150 kg/m ³
Beton "siklopeen"	1 vol.	3 vol.	5 vol.	200 kg/m ³
Beton pou ranpli blok yo	1 vol.	4 vol.	6 vol.	150 kg/m ³
Beton kouran	1 vol.	2 vol.	3 vol.	300 kg/m ³

7.4 – Masonri ak wòch

Rezime

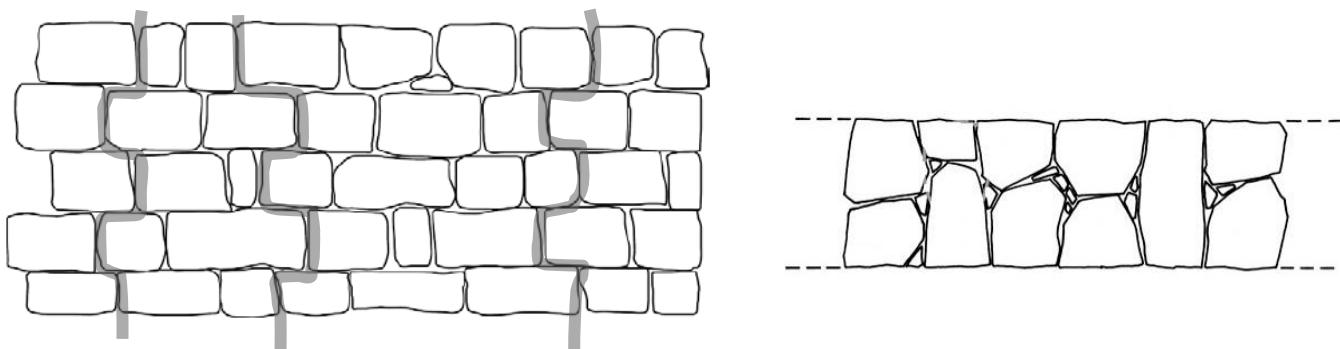

Poze wòch yo byen CHITA

Evite mete anpil mòtye nan jwen yo, pito w mete ti piti wòch pou kale wòch yo.

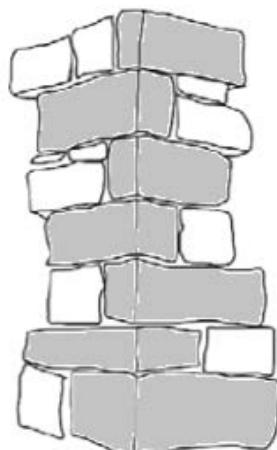

Pa fè jwen file. Altène gwo wòch ak ti wòch epi kwaze jwen yo.

Mete « kle » tout kote nan mi a : se gwo wòch ki fè lajè mi a e ki pèmèt mare mi a.

Kwaze gwo wòch yo ki nan kwen yon ranje sou lòt.
Menm bagay la tou aplike nan mi yo ki nan separasyon.

7.5 - Fondasyon

Misereor – Concert-Action

Prensip fondasyon

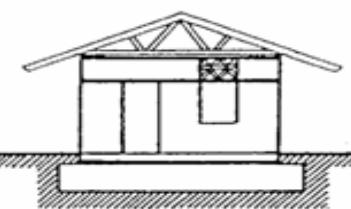

Dimansyon pou kay senp ki gen yon nivo

Fondasyon an dwe distribiye pwa kay la nan tè a.

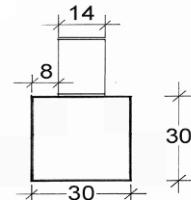

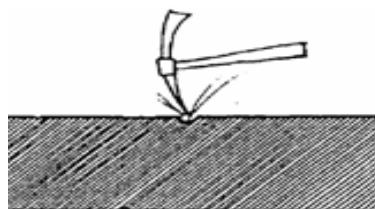

Dimansyon li depann de kalite tè ki sipòte li a.

Tablo sa a se sèlman pou bay **endikasyon** nan dimansyon fondasyon yo

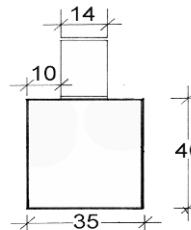

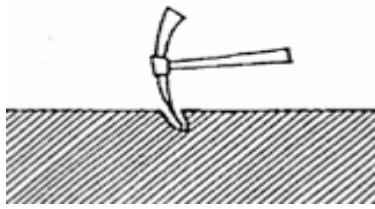

Kay avek I nivo sèlman

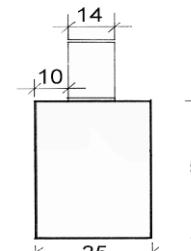

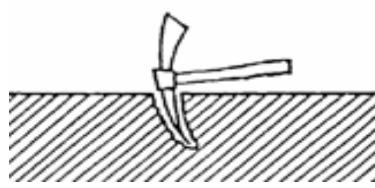

TÈ A DI

TÈ A PA TWÒ DI

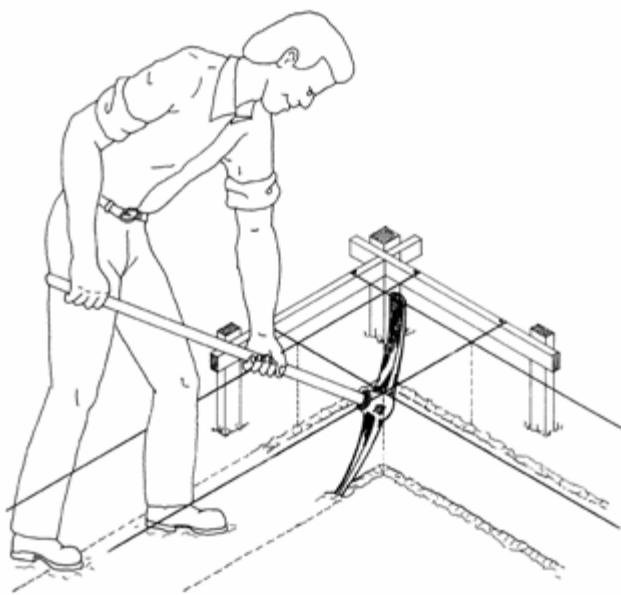

TÈ A MOU

Atansyon !

Kay ki pa gen fondasyon ou ki gen pòv kalite fondasyon se yon kay ki enstab e ki ka tonbe fasil.

Fouy la

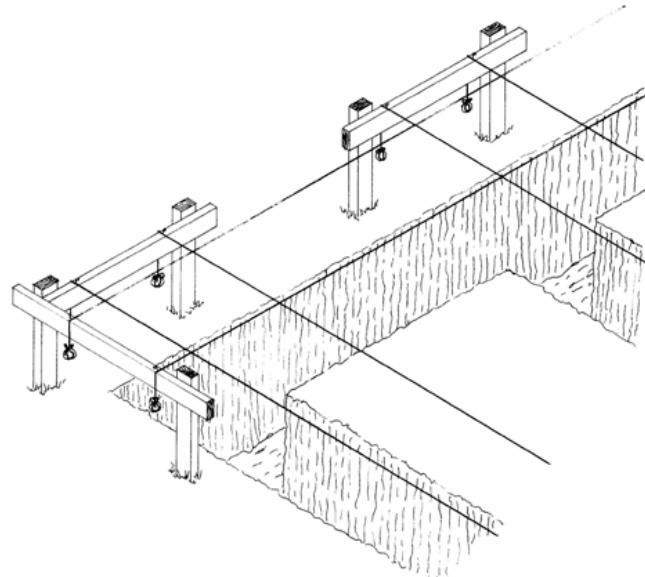

Twou fondasyon sèvi tankou kofraj

Atansyon !

Si twou fondasyon an fèt pi làj fondasyon ap koute plis kob.

- **Make** limit fondasyon yo ak yon pikwa.
- **Fouye** byen vètikal e suiv fisèl la byen.
- **Retire** tè arab ki anlè deyò chantye a. Nou pap itilize li nan konstriksyon.
- **Stoke** tè a ki bon tou pre chantye a pou lè wap bezwen pou ranble a ak pou konstriksyon an

EMPÒTAN !

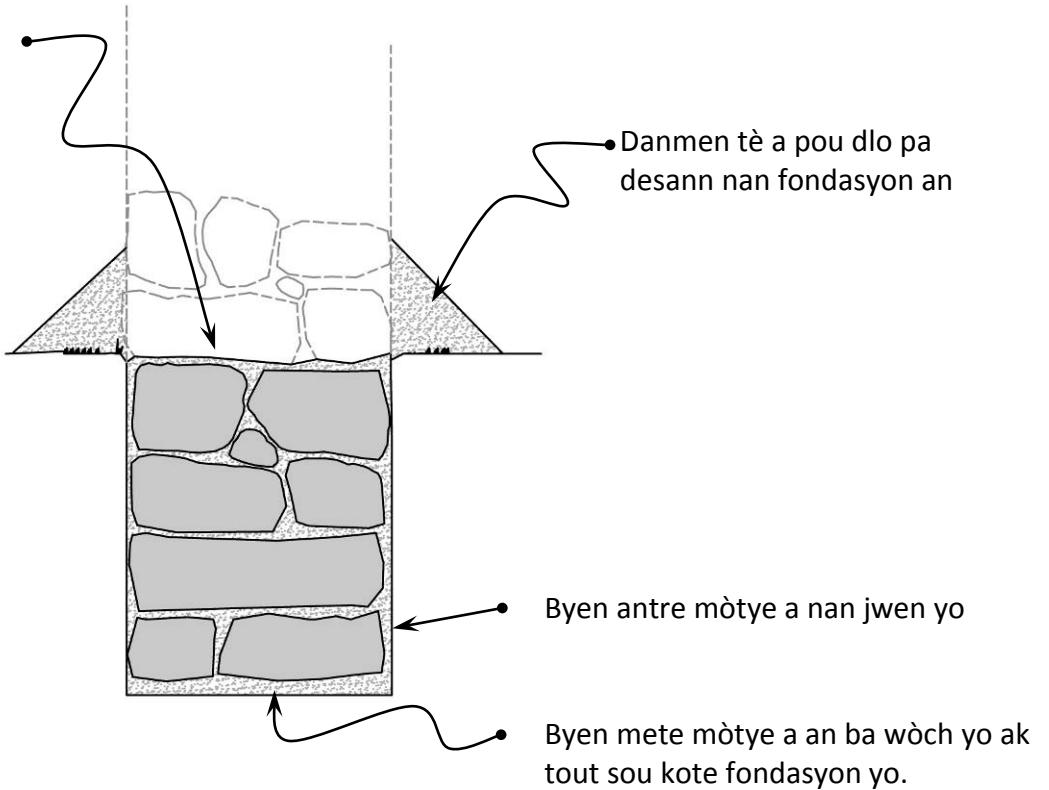

Pa fouye fondasyon an si w pa si wap ranpli'l avan lapli

Si'l pa posib, alò mete nan fon fouy la yon **kouch beton pwòpte** 5 cm avek yon melanj ki 150 kg / m³ (1 Siman / 4 Sab / 6 Gravye).

Fondasyon an masonri ak wòch

Komansman sol kay la

Mete sifas la a nivo ak fisèl la

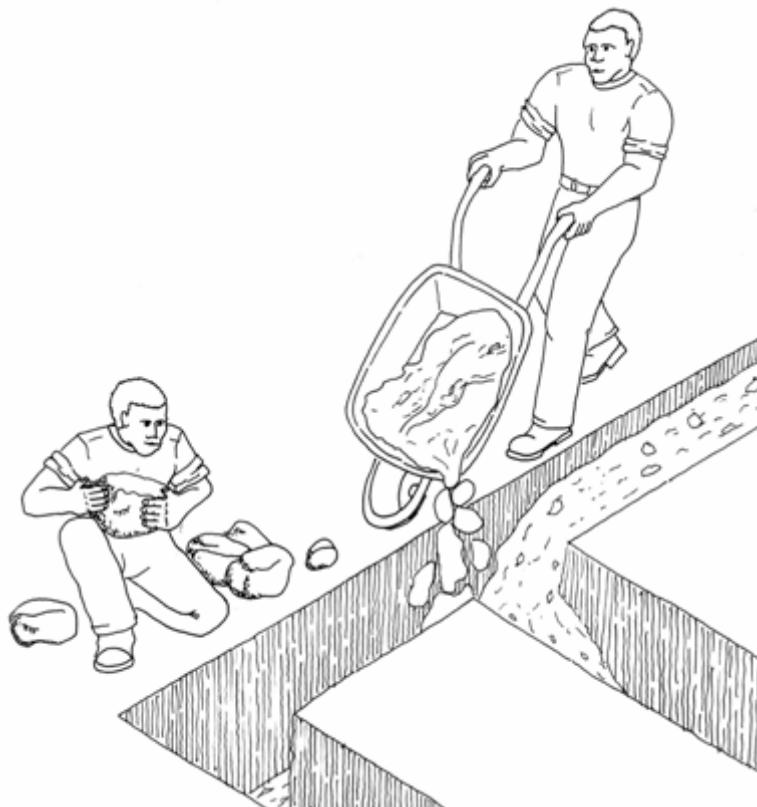

Fason nou fè masonri dwe respekte bon jan reg yo pou mont mi wòch

An pàtikilye :

- Mete wòch yo byen chita
- Pa fè jwen file epi mete « kle » tout kote pour mare mi a
- Evite jwen ki epe, li pa dwe depase 3 cm

Fondasyon beton siklopeen

Lè woch yo twò piti pou fè yon masonri wòch, ou ka mete yo nan yon beton leje. Yo rele sa **beton siklopeen**.

Twou fouy la sèvi tankou kofraj

Woze sifas la chak jou pandan
yon semenn
(oubyen kouvril ak tè)

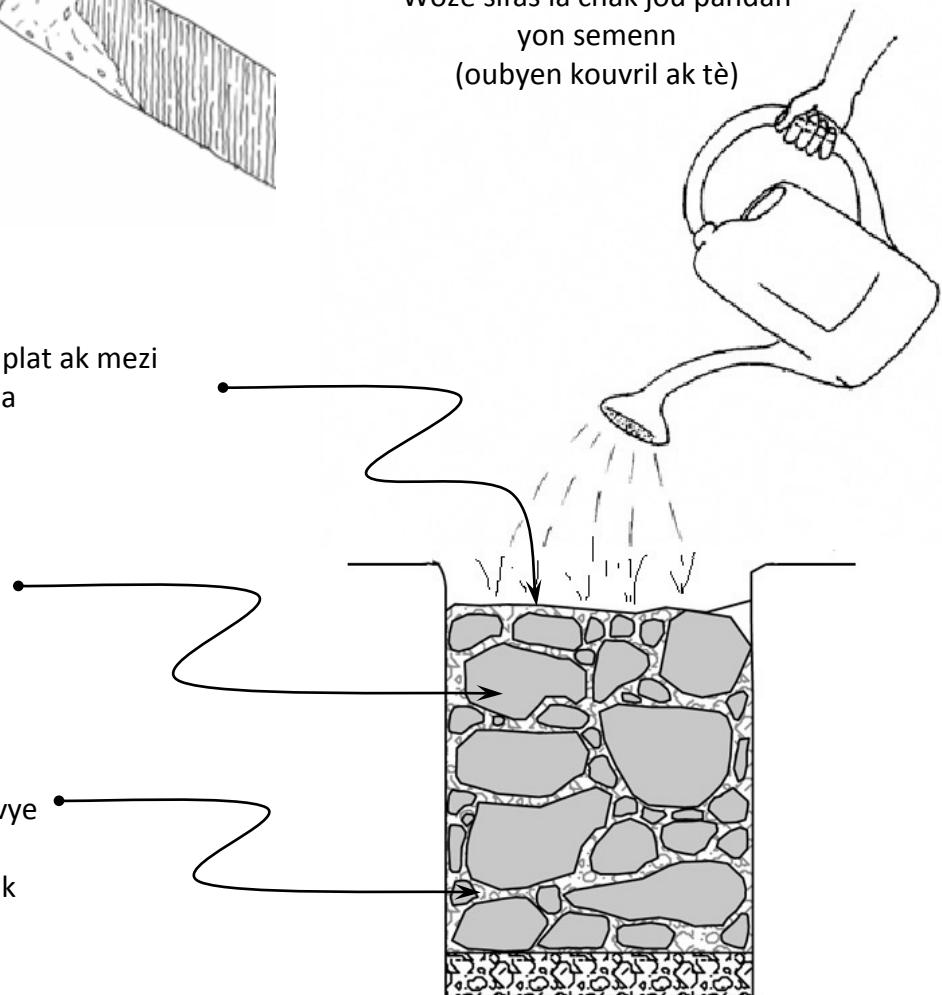

Fè sifas la plat ak mezi
depi fisèl la

Mete wòch yo nan beton men evite
youn touche ak lòt

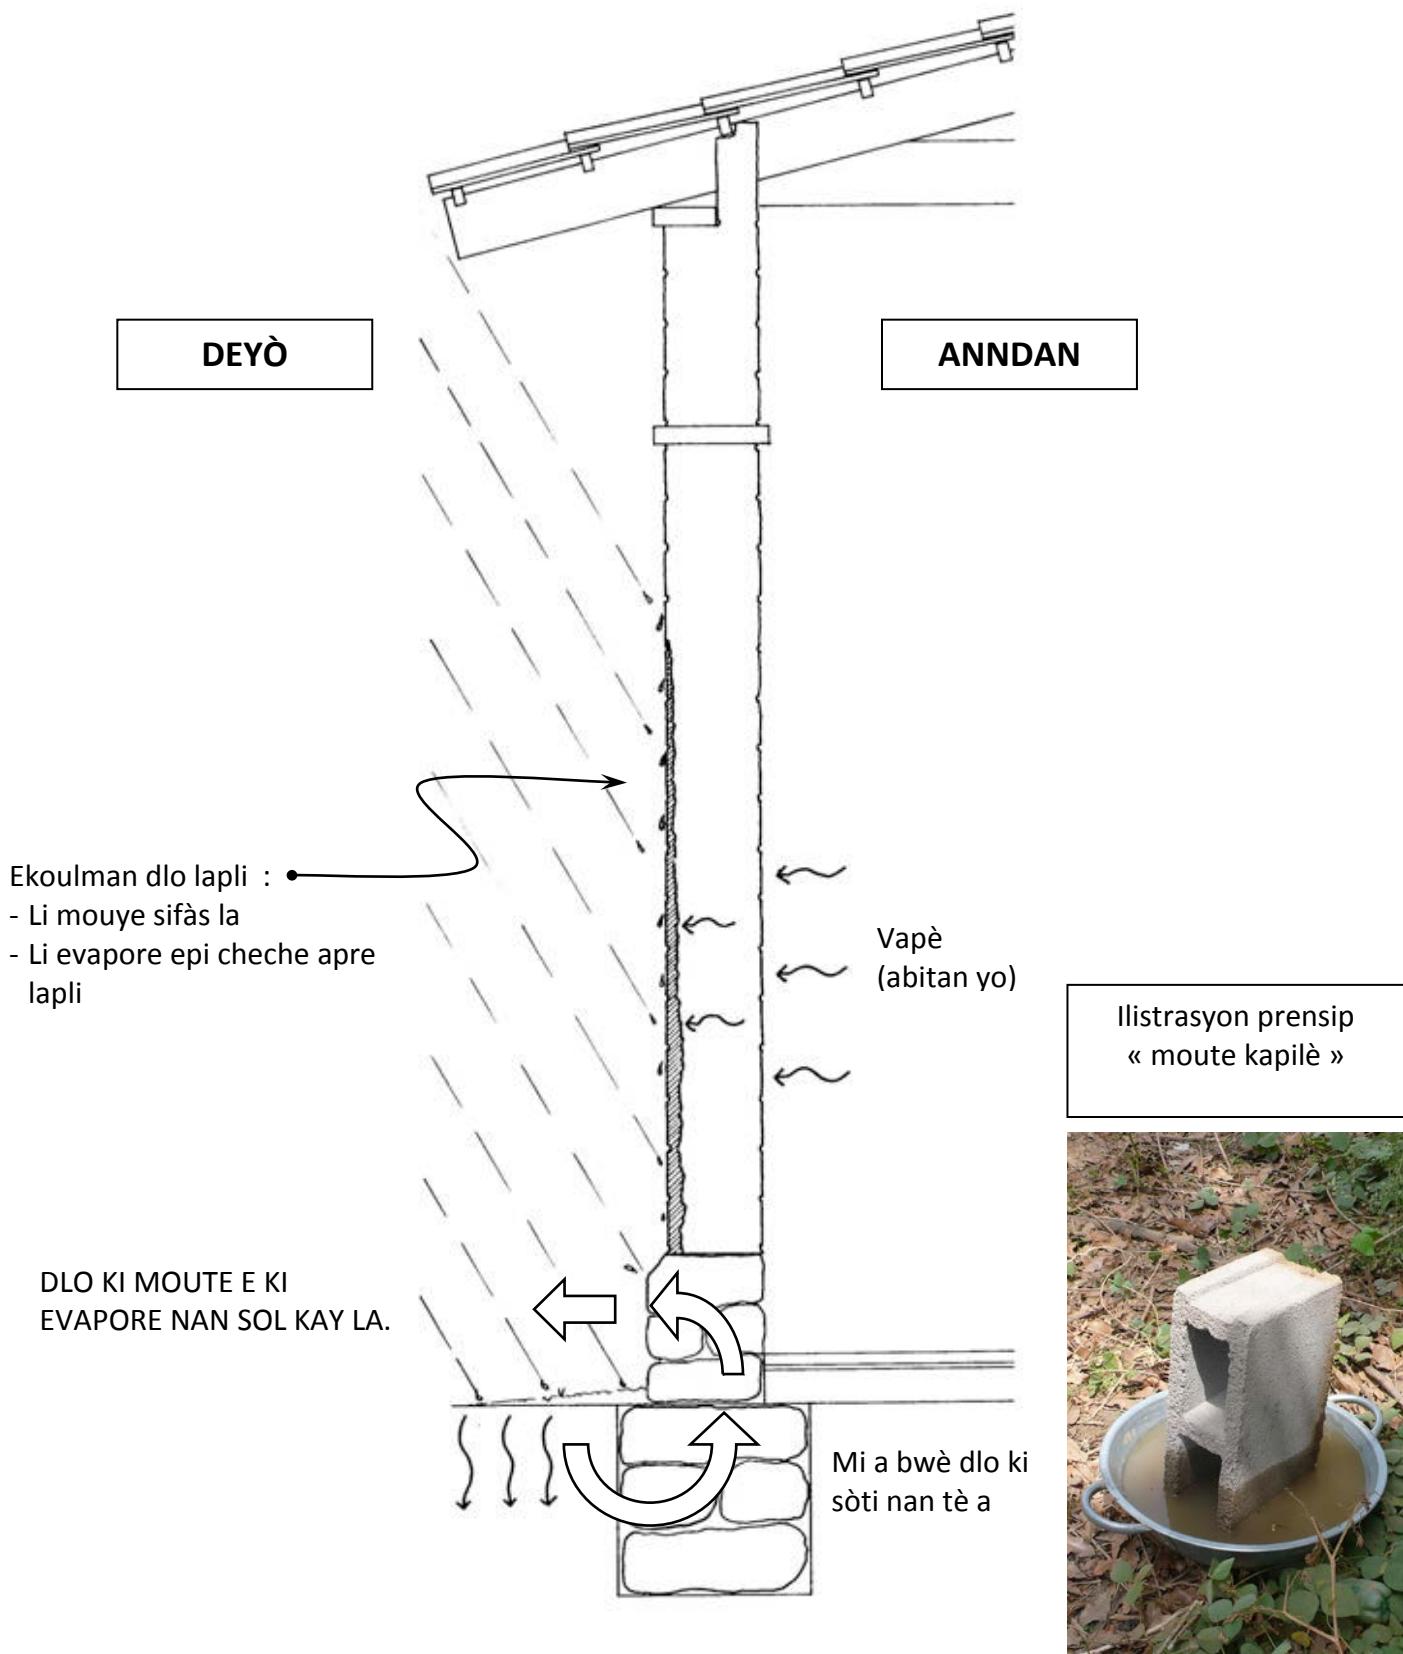

Melanj beton a 200 Kg / m³

1 vol. Siman / 3 vol. Sab / 5 vol. Gravye

Fè atansyon pou chak wòch kouvri ak
beton.

7.6 – Solay kay

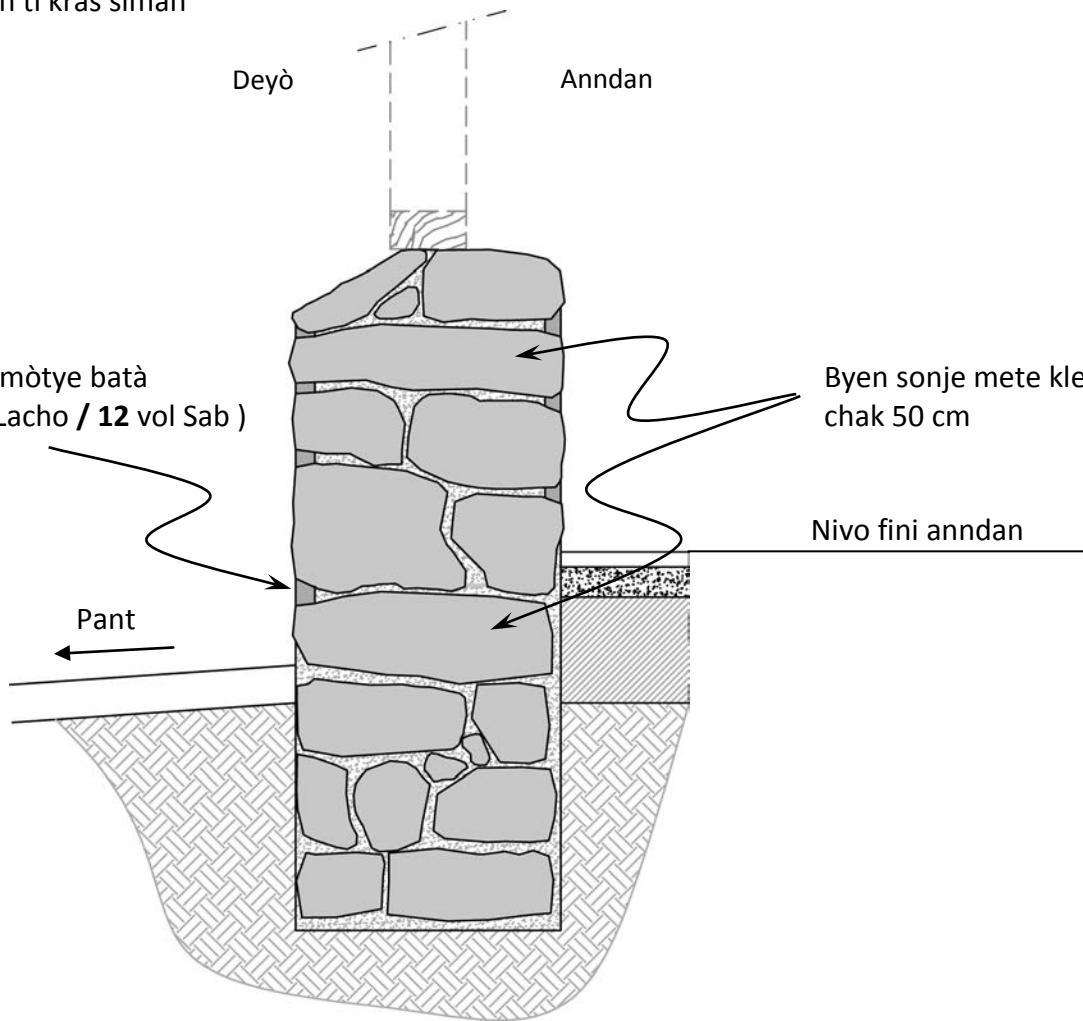

Sol ak wòch

Fason nou fè masonri dwe respekte bon jan reg yo pou monte mi wòch.

Li pi bon pou nou itlize mòtye ki soup, sa vle di kip a twò di (ak fib si posib) :

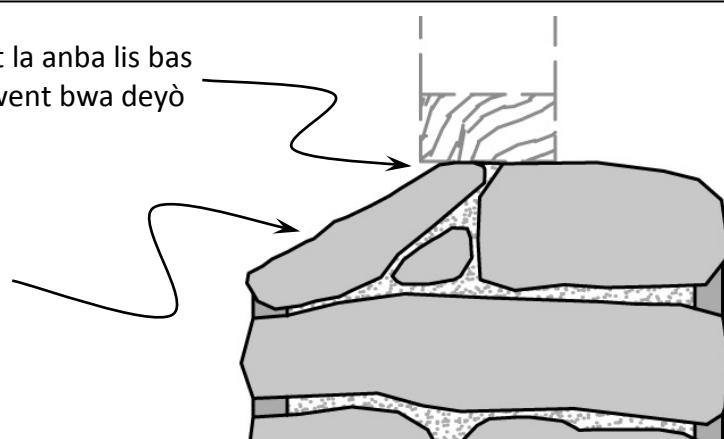

- Tè + Sab (+ pit si nou genyen)
- Tè + Sab + Lacho
- Tè avek yon ti kras siman

Lè mòtye a sèk,
Fè jwen yo avek yon mòtye batà
(**1 vol Siman / 3 vol Lacho / 12 vol Sab**)

**Detay pou tali a**

Komanse pant la anba lis bas
pou ka kite pwent bwa deyò

Chache wòch ki plat pou fè yon pant
ki pèmèt dlo lapli koule deyò

Sol avek 3 blok siman - Aplikasyon

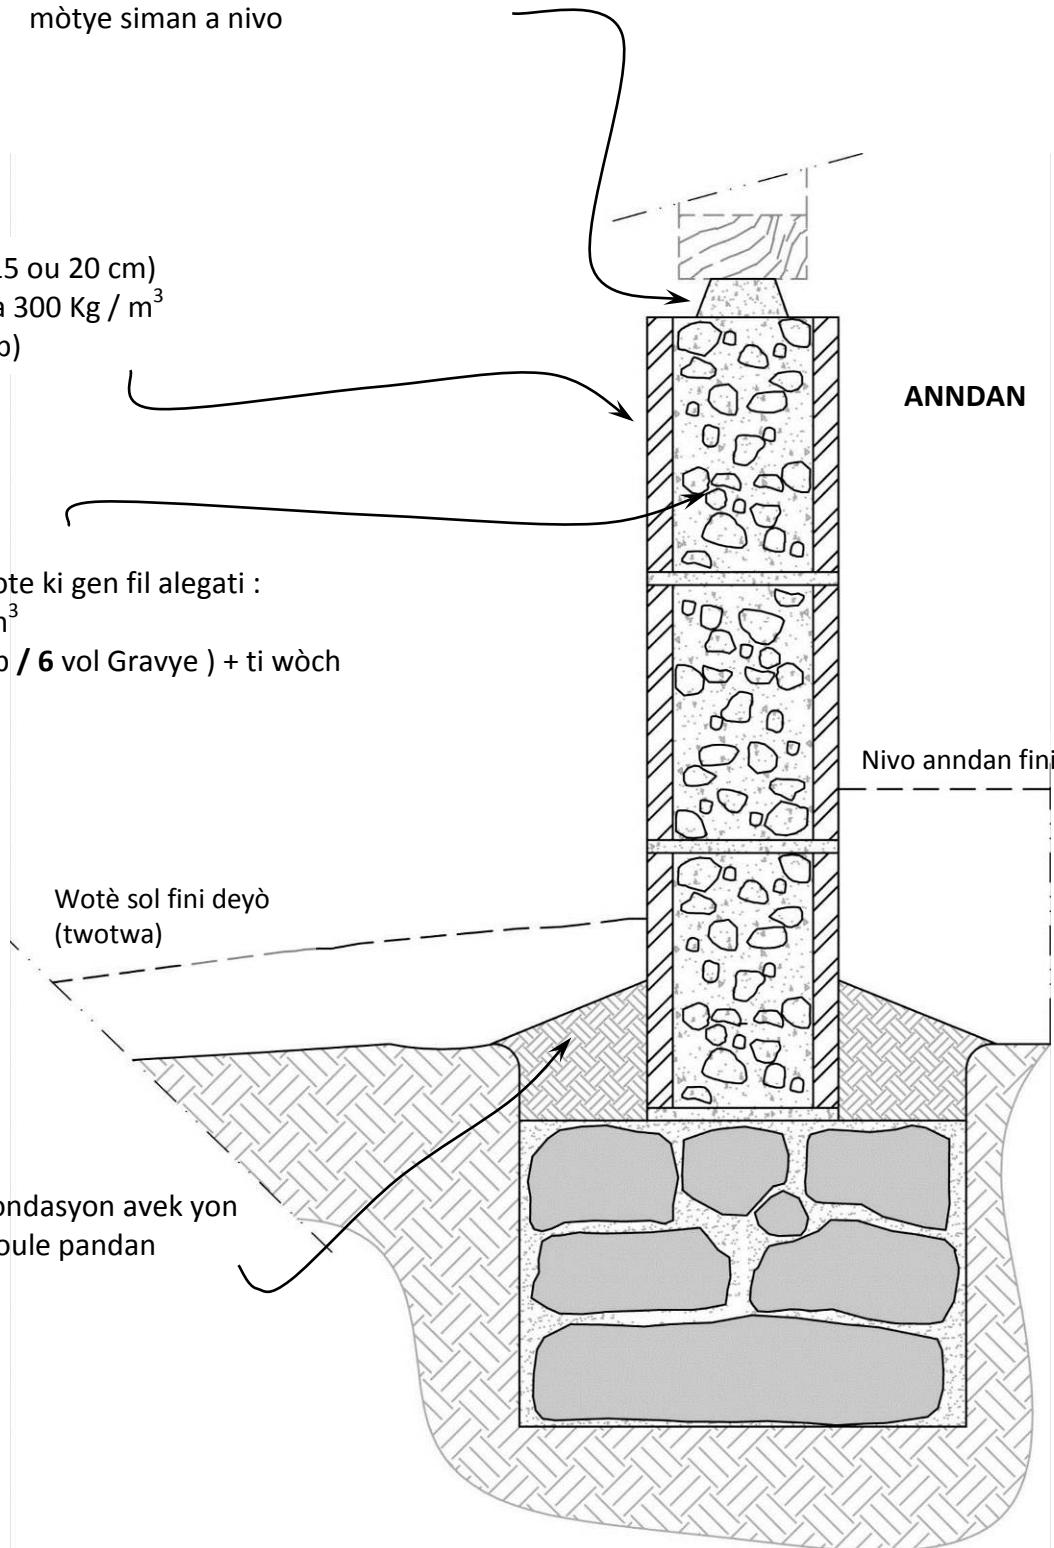

Moute lis bas 1'' anviwon sou ti plo
mòtye siman a nivo

Blok beton (40 x 20 x 15 ou 20 cm)
poze ak mòtye siman a 300 Kg / m³
(1 vol Siman / 5 vol Sab)

RANPLISAJ BLOK YO :

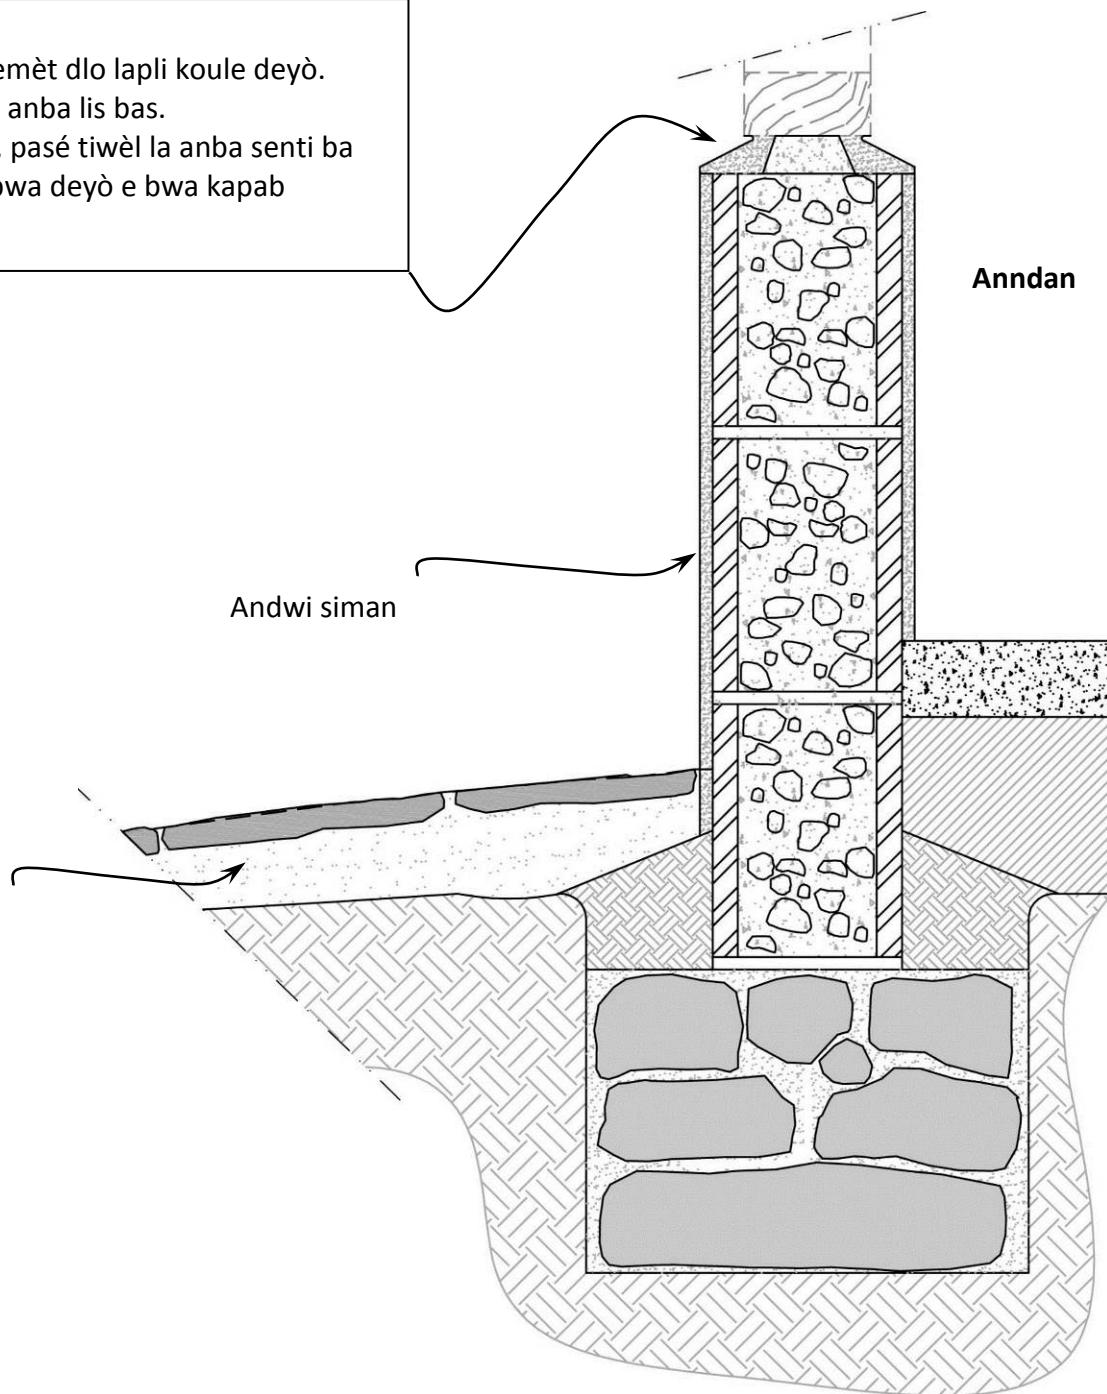

Plen blok yo omwen kote ki gen fil alegati :
Beton leje a 150 Kg / m³
(1 vol Siman / 4 vol Sab / 6 vol Gravye) + ti wòch

Pwoteje fondasyon avek yon
tali ak tè foule pandan
chantye a

Sol avek 3 blok siman – Andwisaj ak tali**TALI :**

Fè yon pant ki pèmèt dlo lapli koule deyò.
 Komanse pant la anba lis bas.
 Lè mòtye fèk fèt, pasé tiwèl la anba senti ba
 pou kite pwent bwa deyò e bwa kapab
 respire.

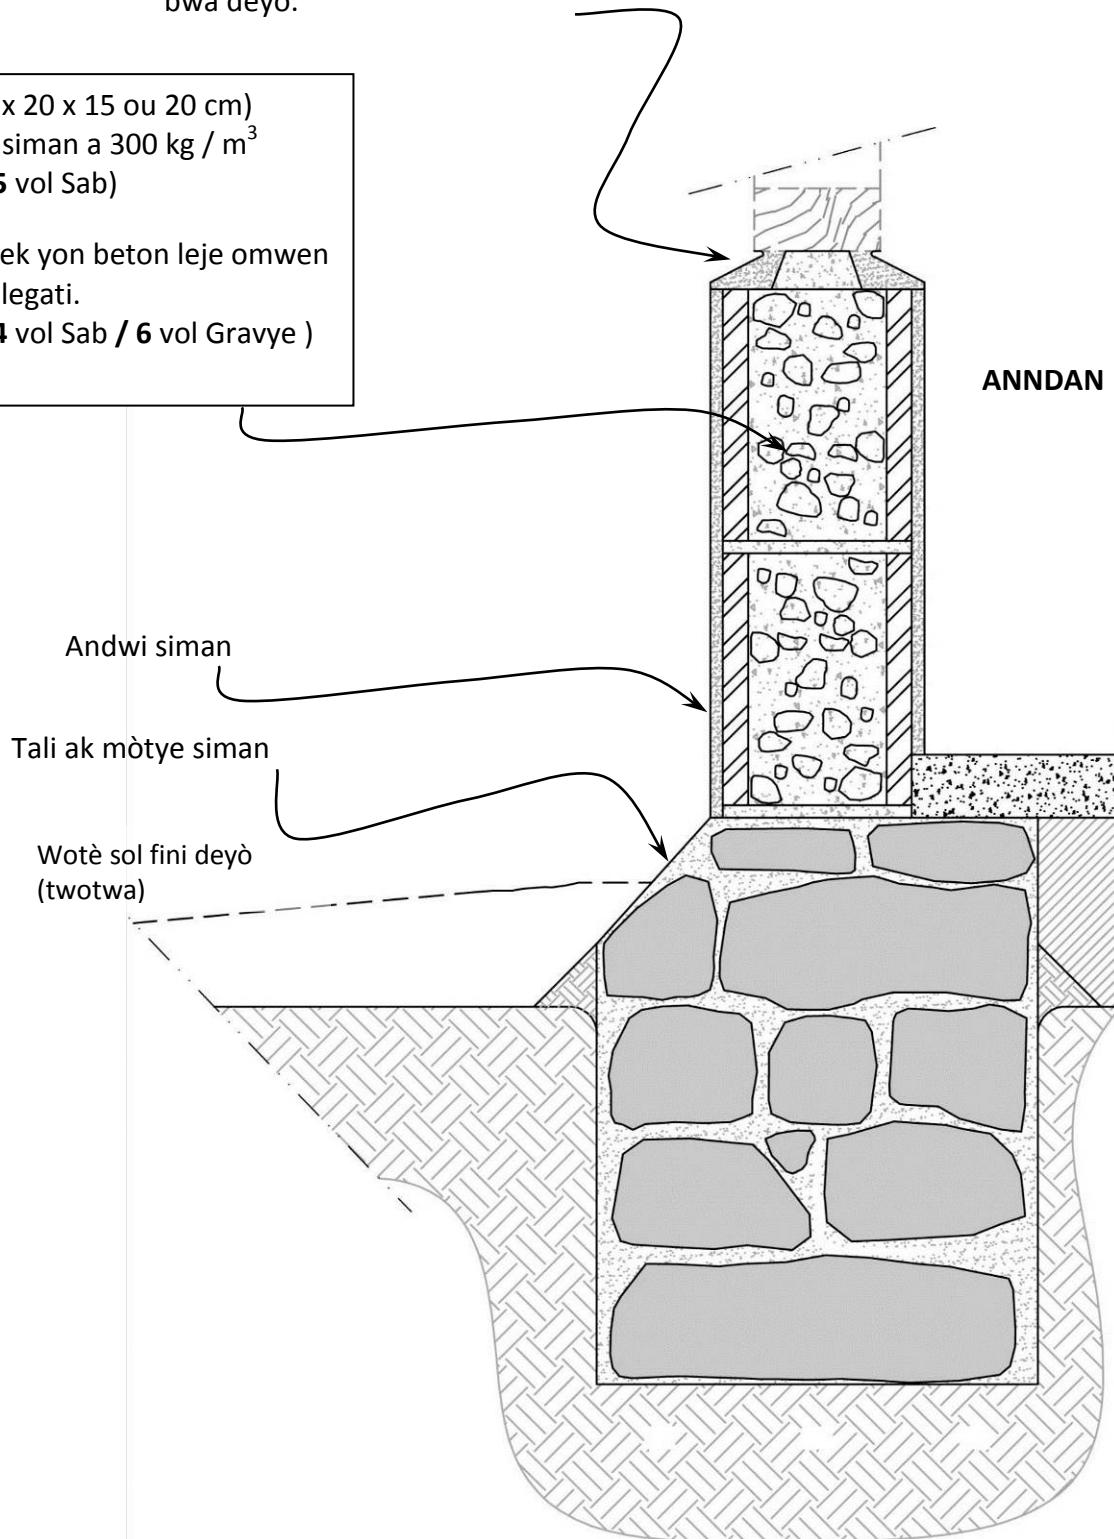

Sol avek 2 blok siman + 15 cm wòch

Fè yon pant ki pèmèt dlo lapli koule deyò.
 Komanse pant la anba lis bas pou kite pwent
 bwa deyò.

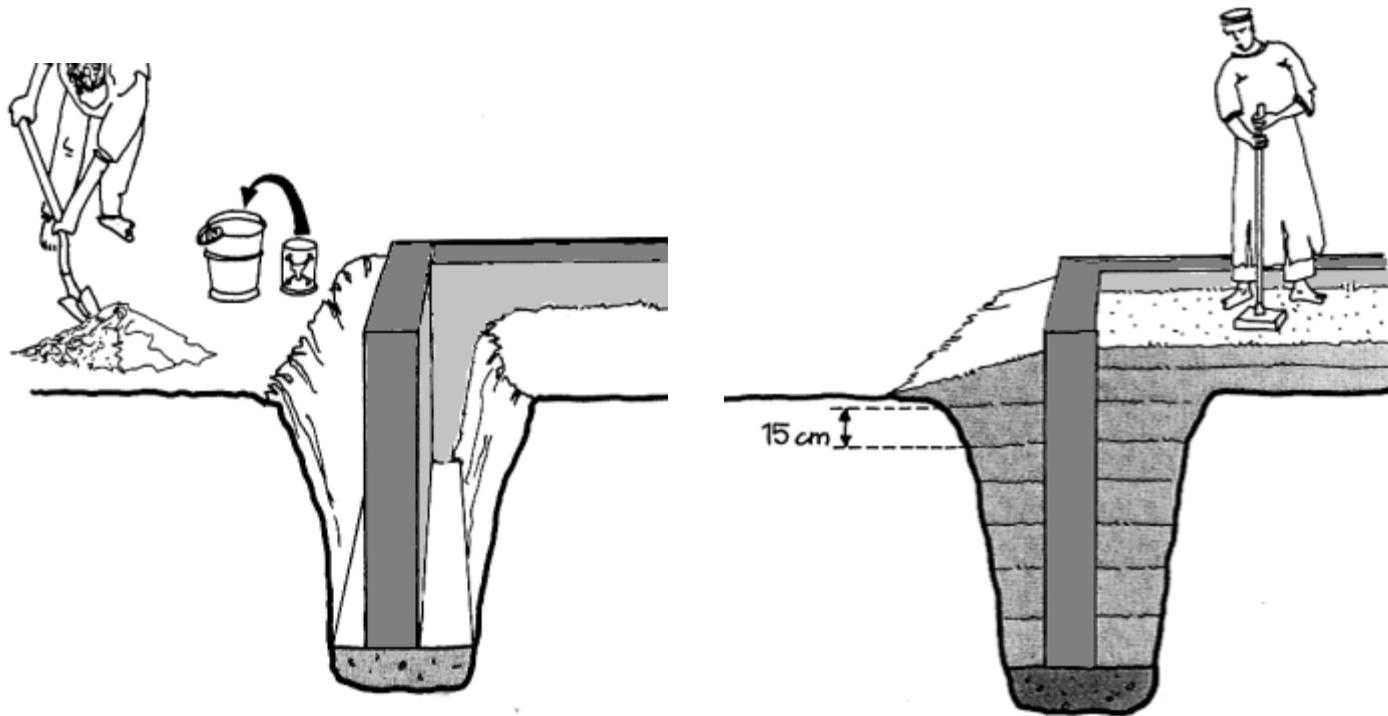

Blok beton ($40 \times 20 \times 15$ ou 20 cm)
 poze ak mòtye siman a $300 \text{ kg} / \text{m}^3$
(1 vol Siman / 5 vol Sab)

Plen blok yo avek yon beton leje omwen
 kote ki gen fil alegati.
(1 vol Siman / 4 vol Sab / 6 vol Gravye)
 + ti wòch

Ramble

Ramble se yon etap esansyel pou pwoteje fondasyon yo, baz mi yo ak anndan kay la kont dlo ki ka antre. Nivo ramble a dwe rive pi wo pase nivo sol teren deyò.

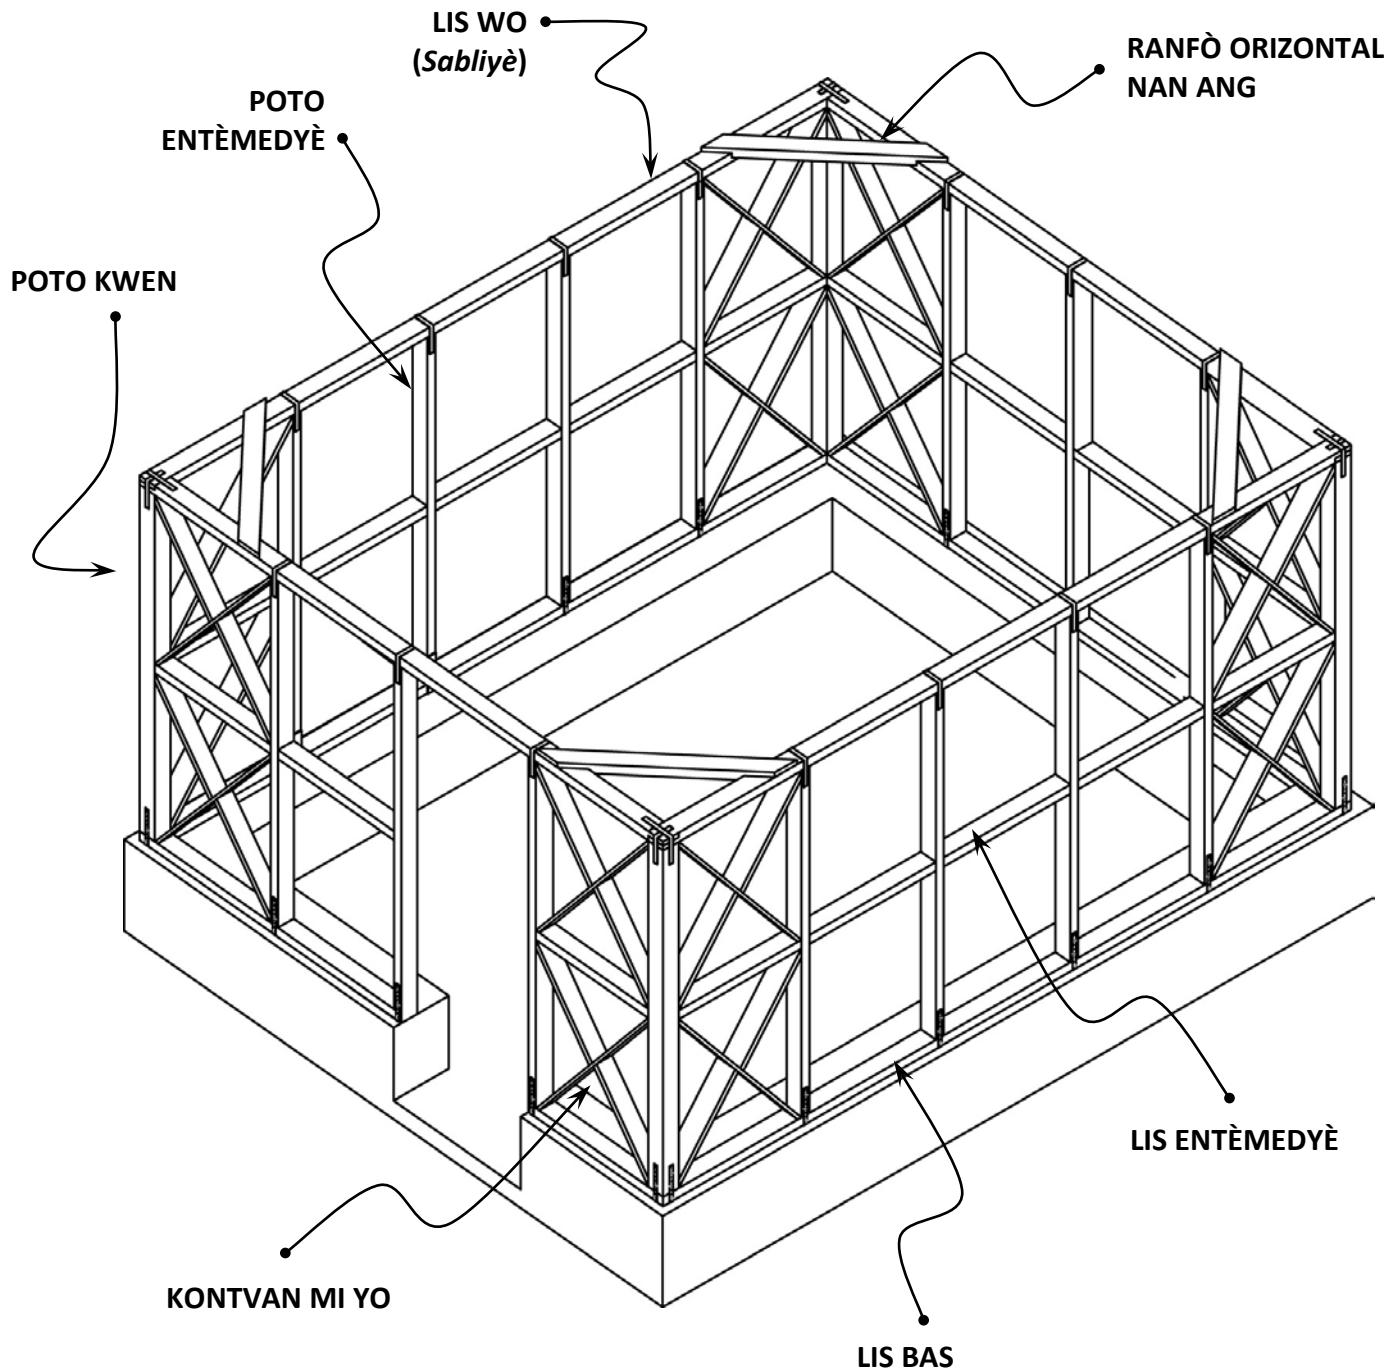

Ramble fèt ak wòch ak graviye pour pèmèt pakèt la byen respire. Nou rele se « lerison ».

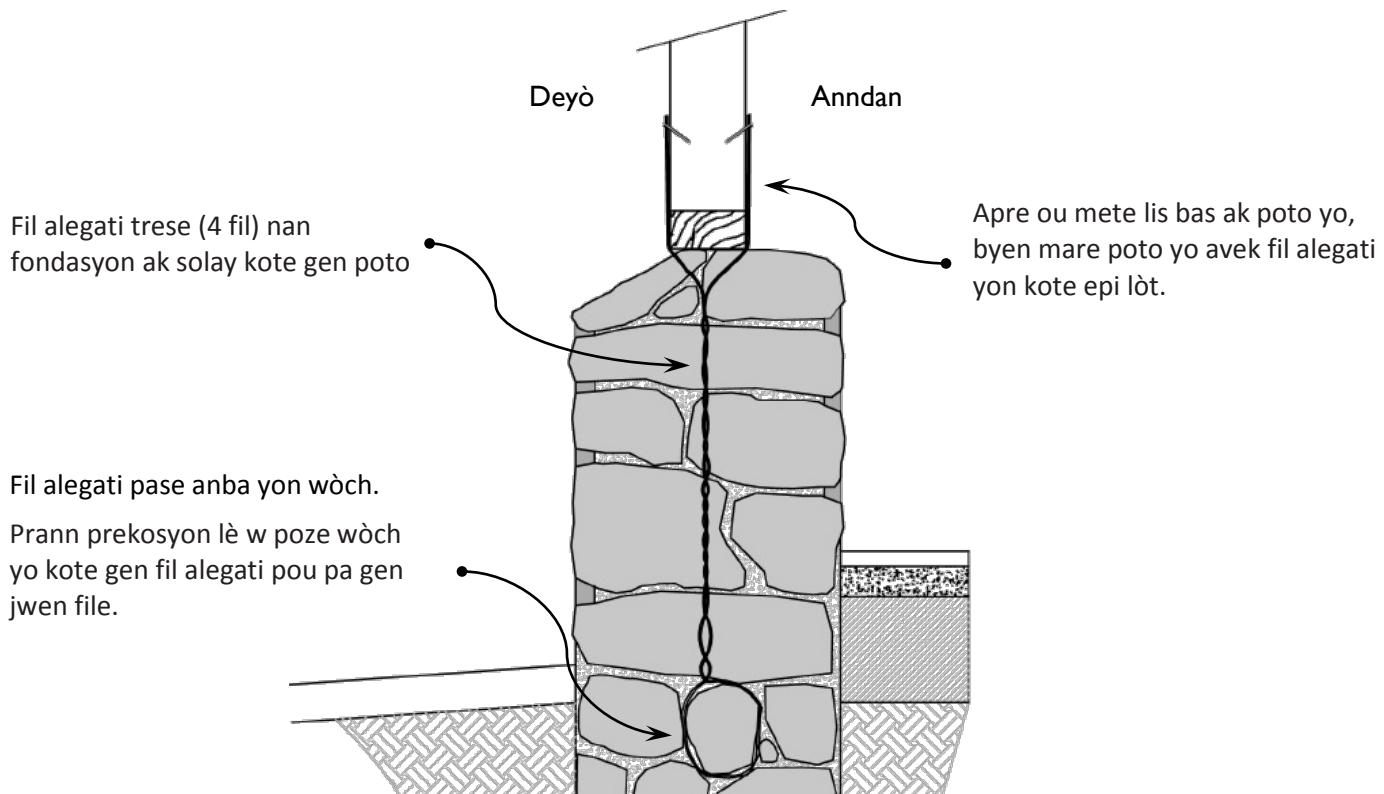

7.7 – Chàpant an bwa pou mi yo

Estrikti jeneral

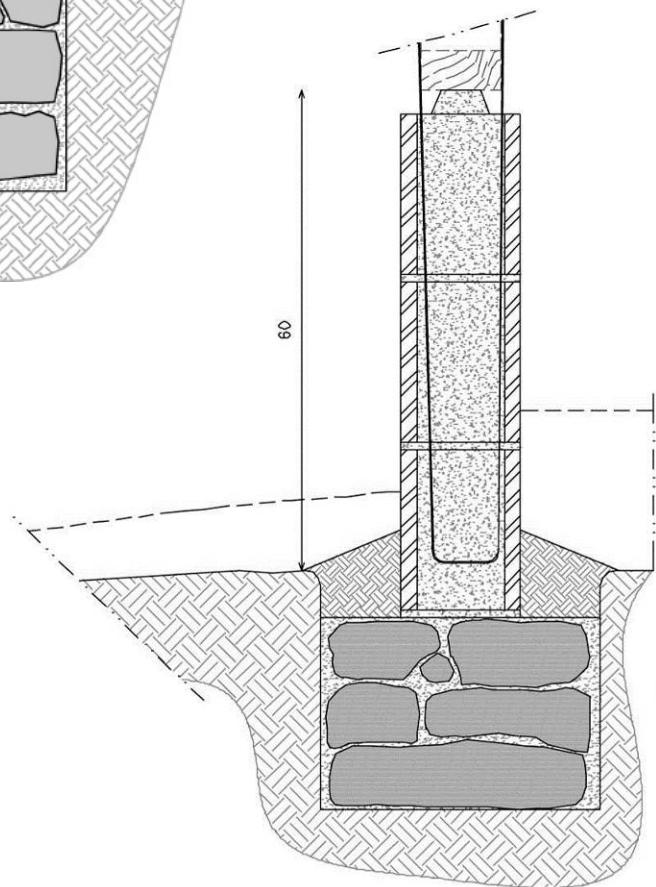

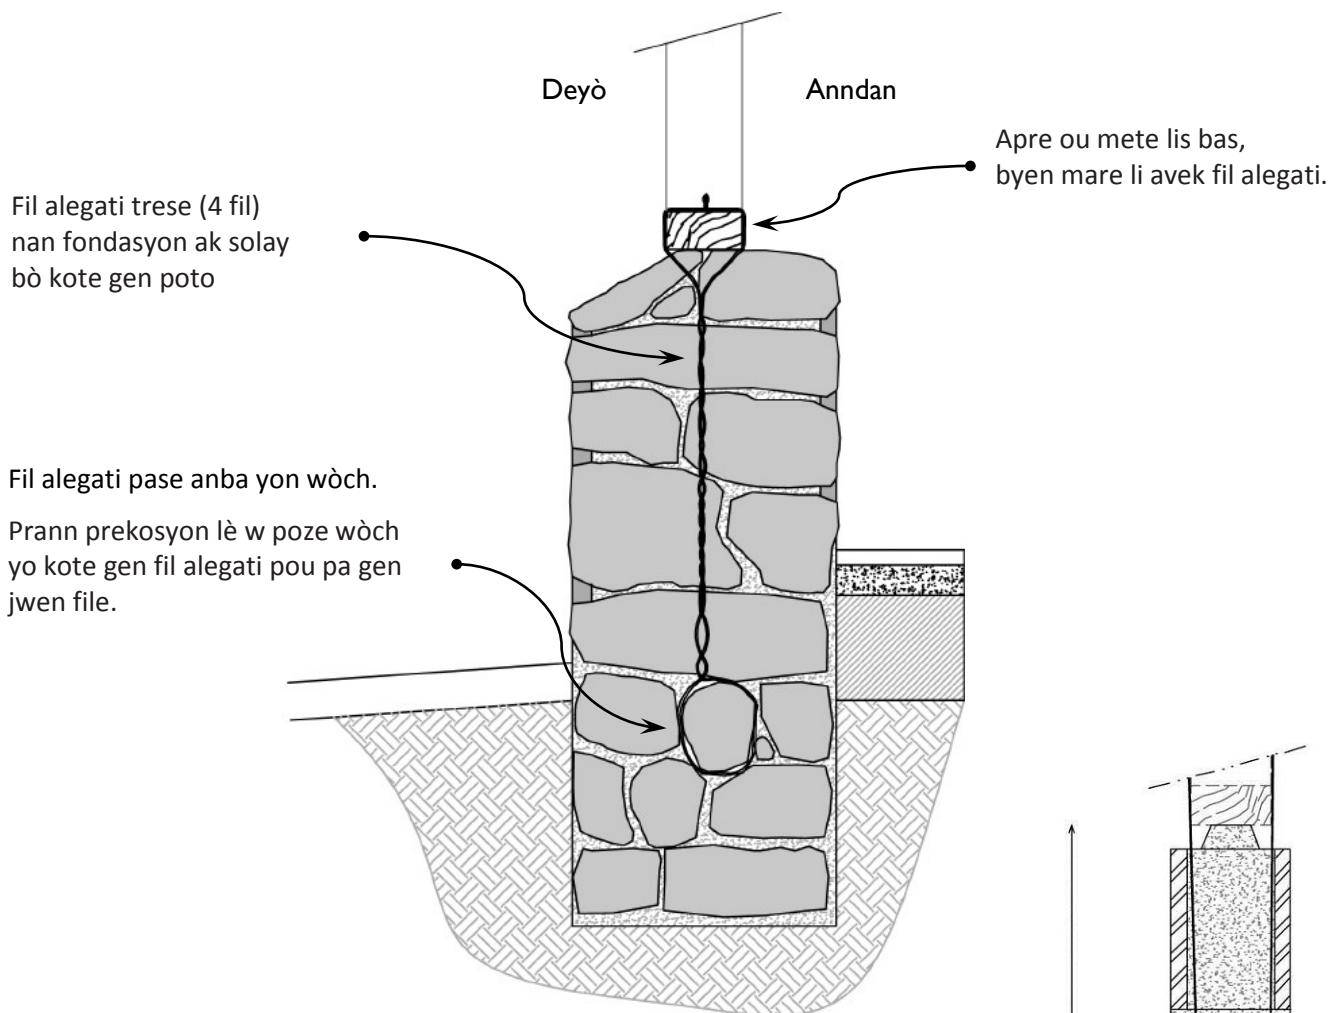

Maraj estrikti an bwa : Fil alegati mare sou poto yo

Mete fil alegati byen mare nan fondasyon nan anplasman chak poto

Maraj estrikti an bwa : Fil alegati mare sou lis bas

Mete fil alegati byen mare nan fondasyon bò anplasman chak poto

Maraj estrikti an bwa : Fè beton ki pliye sou lis bas

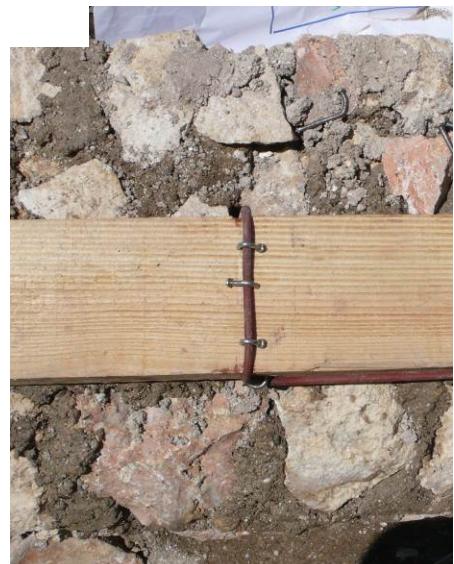

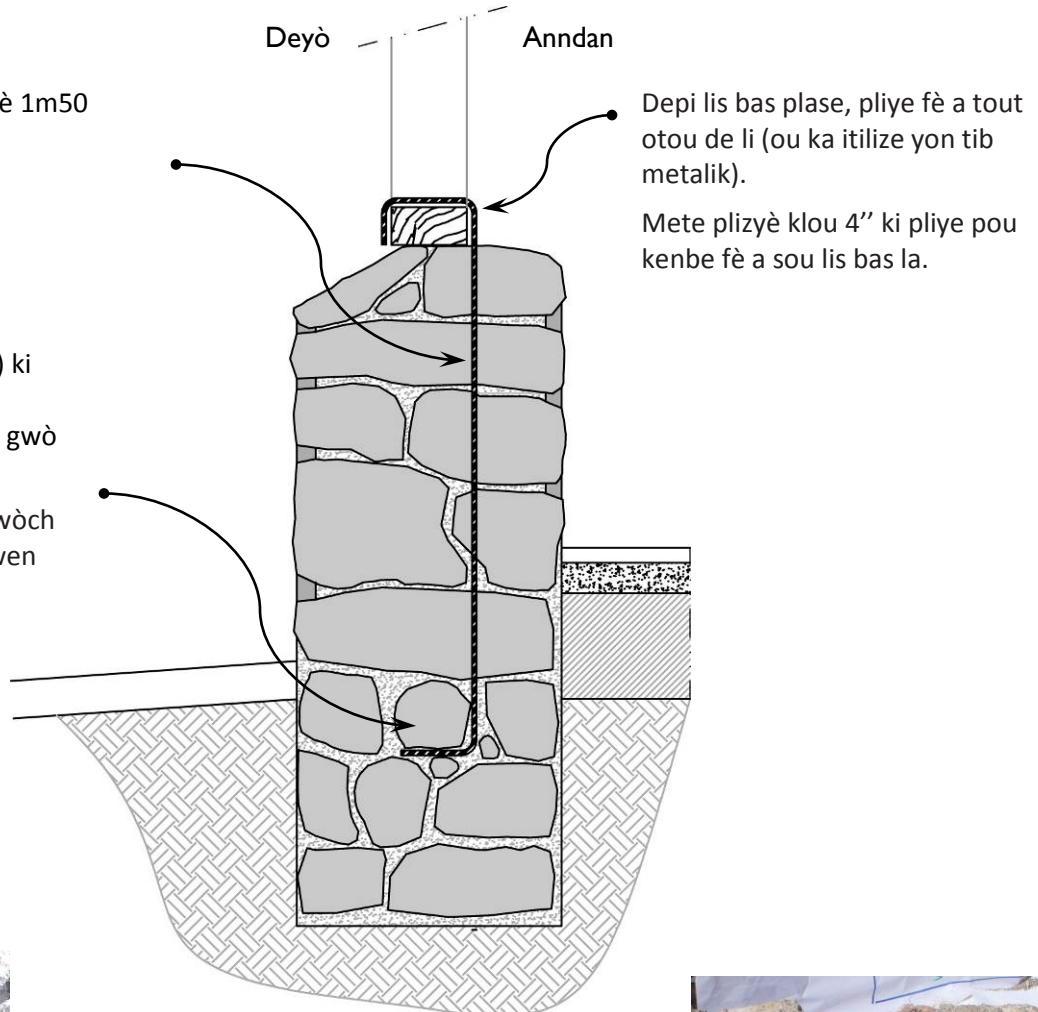

Mete pyes maraj nan ang yo (sòti 30 cm minimòm depi kwen) epi chak 2 oubyen 3 poto.
Evite mete maraj kote nou asanble lis bas ansanm.

Fè beton (1/4" ou plis), longè 1m50
anviwon.

Pwoteje fè a avek minyòm.

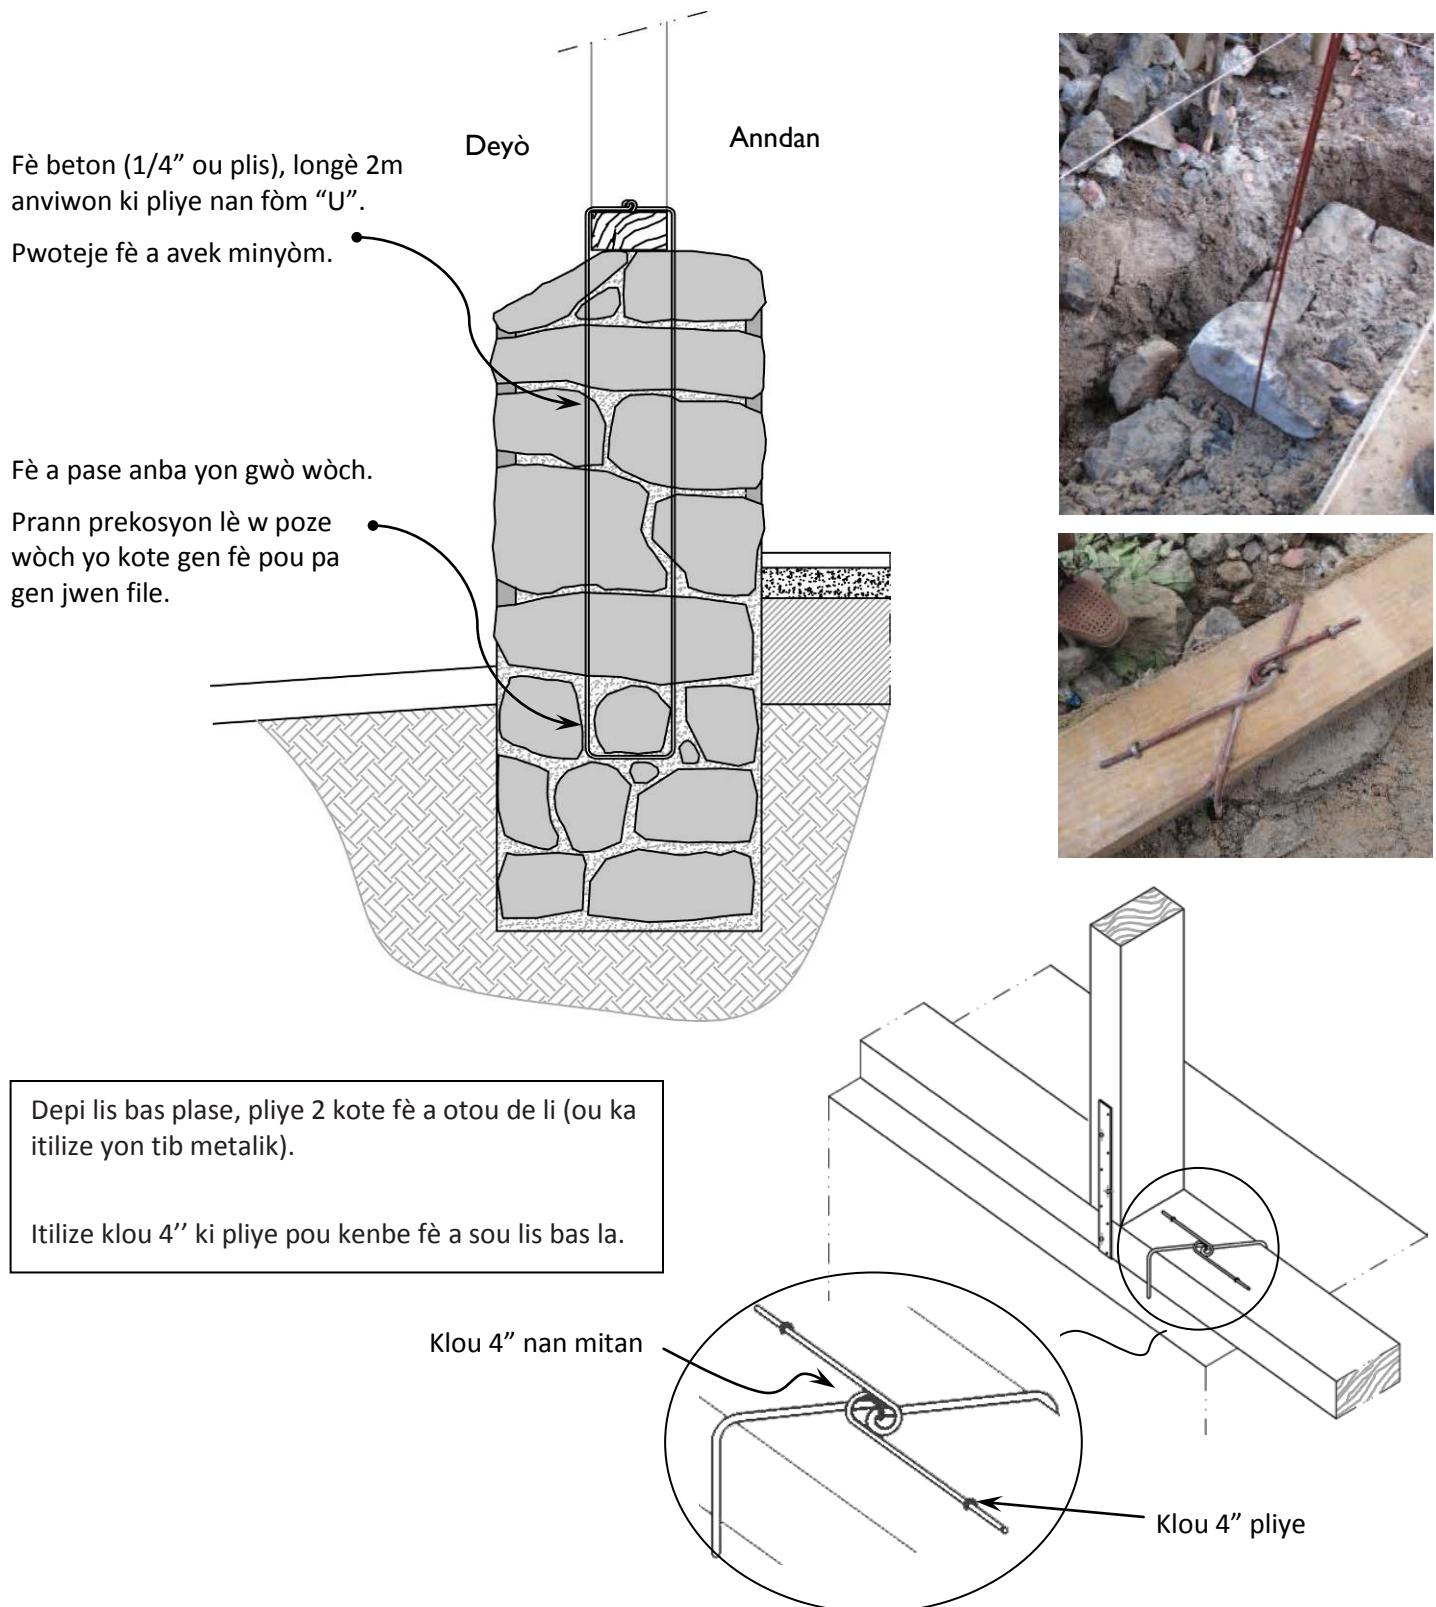

Fè a li gen omwen 30 cm (1') ki
pliye anba nan direksyon
fondasyon. Li pase anba yon gwò
wòch.

Prann prekosyon lè w poze wòch
yo kote gen fè pou pa gen jwen
file.

Maraj estrikti an bwa – Fè beton an fòm U ki pliye sou lis bas

Mete pyès maraj nan ang yo (sòti 30 cm minimòm depi kwen) epi chak 2 oubyen 3 poto.
Evite mete maraj kote nou asanble lis bas ansanm.

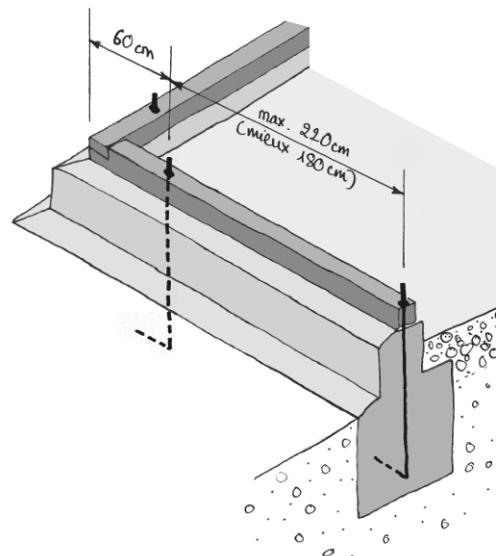

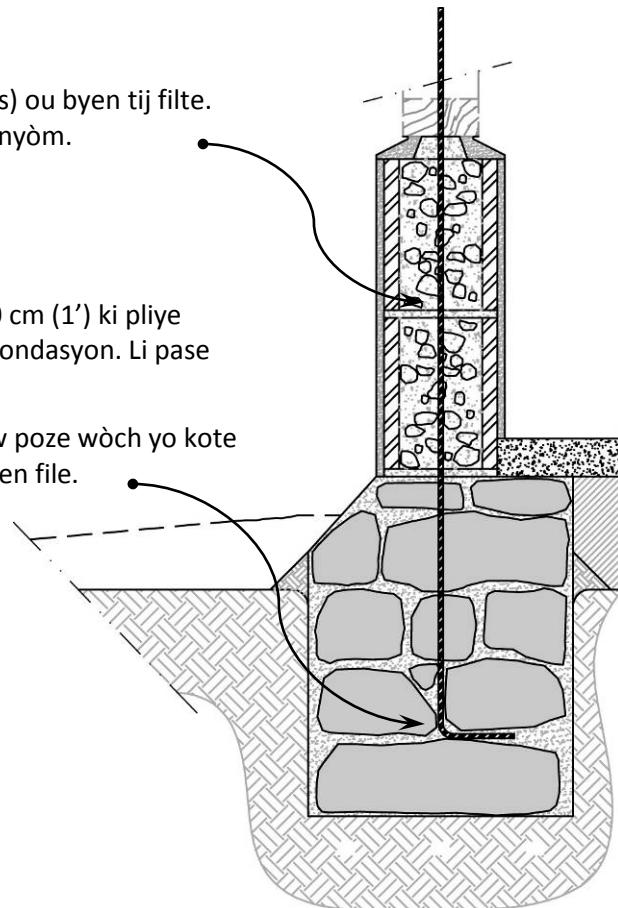

Maraj estrikti an bwa – Fè beton an L ki pase nan mitan lis bas

Mete pyes maraj nan ang yo (sòti 30 cm minimòm depi kwen) epi chak 2 oubyen 3 foto.
Evite mete maraj kote nou asanble lis bas ansanm.

Fè beton (1/4" ou plis) ou byen tij filte.
 Pwoteje fè a avek minyòm.

Fè a li gen omwen 30 cm (1') ki pliye
 anba nan direksyon fondasyon. Li pase
 anba yon gwò wòch.

Prann prekosyon lè w poze wòch yo kote
 gen fè pou pa gen jwen file.

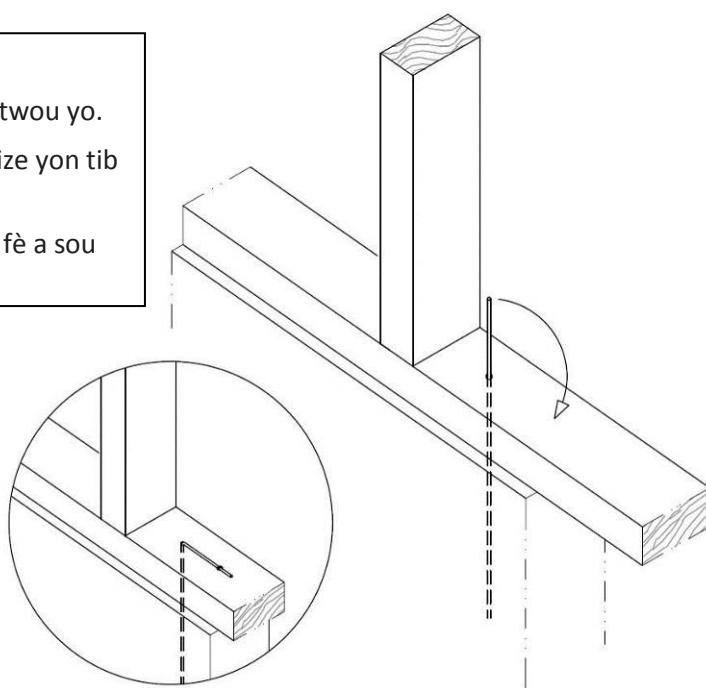

Pèse lis bas kote gen fè ki sòti.

Mete lis bas avek fè ki pase nan twou yo.

Pliye fè a sou lis bas la (ou ka itilize yon tib metalik)

Itilize klou 4" ki pliye pou kenbe fè a sou
 lis bas la.

Avek yon tij filte
 nou ka itilize ekrou
 ak wondèl pou
 fiksasyon an avek lis
 bas la.

Maraj estrikti an bwa – Yon lòt solisyon nan plas sol la : Plo beton

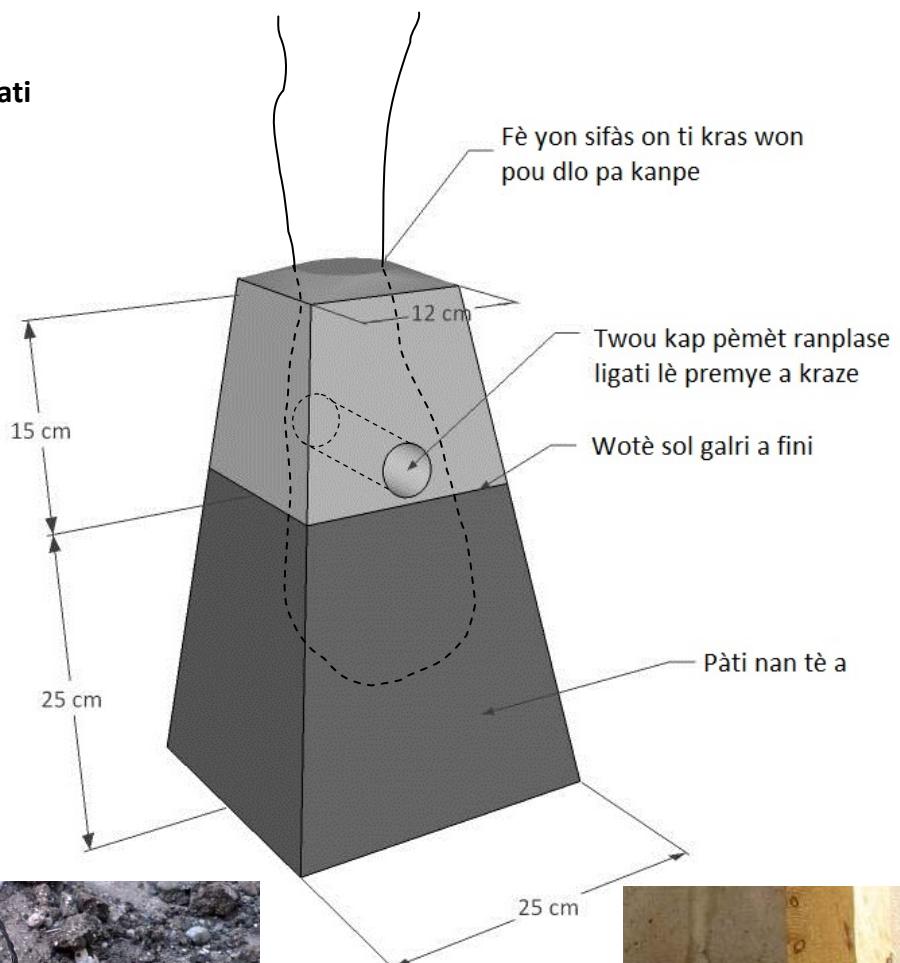

Plo beton prefabrike :

Maraj avek fil alegati ou byen strap (plak metalik)

Pou ki sa nou itilize solisyon sa a :

- Pou ranplase yon bouda poto ki pouri ou byen nan plas sol la
- Pou mete anba poto galri yo

Egzamp plo avek fil alegati

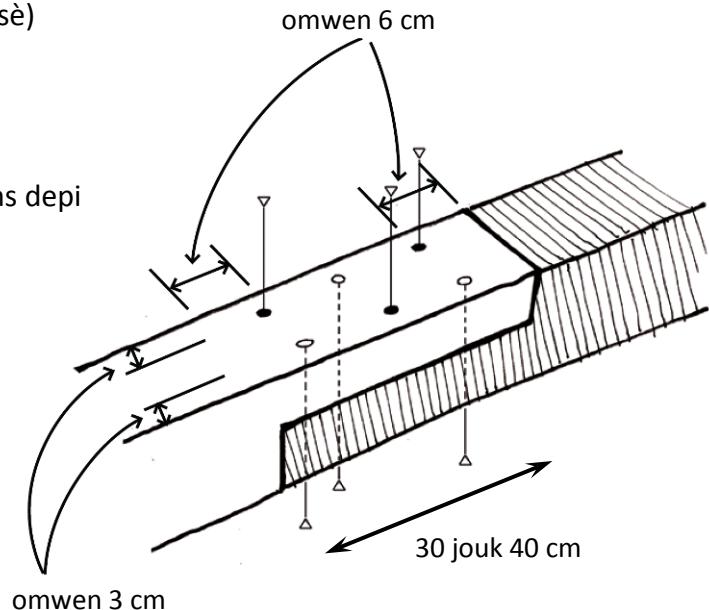

Maraj lis ansanm

KONEKSYON NAN MENM LONGÈ

Asanblaj ki pi fasil se **mibwa** (antay nan mwatye epesè) men, atansyon, pyès bwa yo vinn pi frajil.

Kijan pou'n fikse asanblaj la :

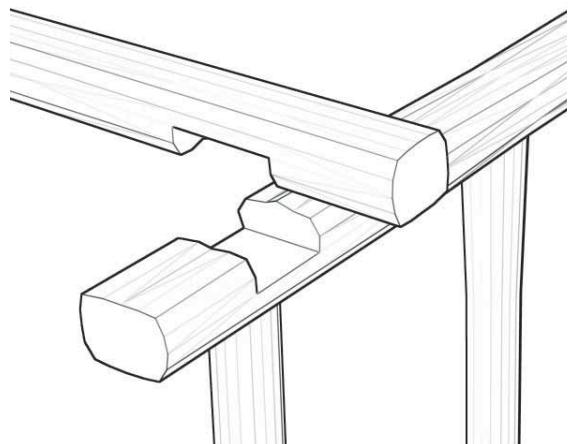

- **Avek klou** : mete 3 klou chak bò e kite yon distans depi limit yo ;
- **Avek cheviy an bwa di.**

KONEKSYON NAN KWEN YO

Se kwen yo ki pi frajil nan konstriksyon. Nou dwe prann prekosyon avec asanblaj mibwa ki se yon koneksyon frajil.

Kite yon longè dèyè asanblaj ki depase.

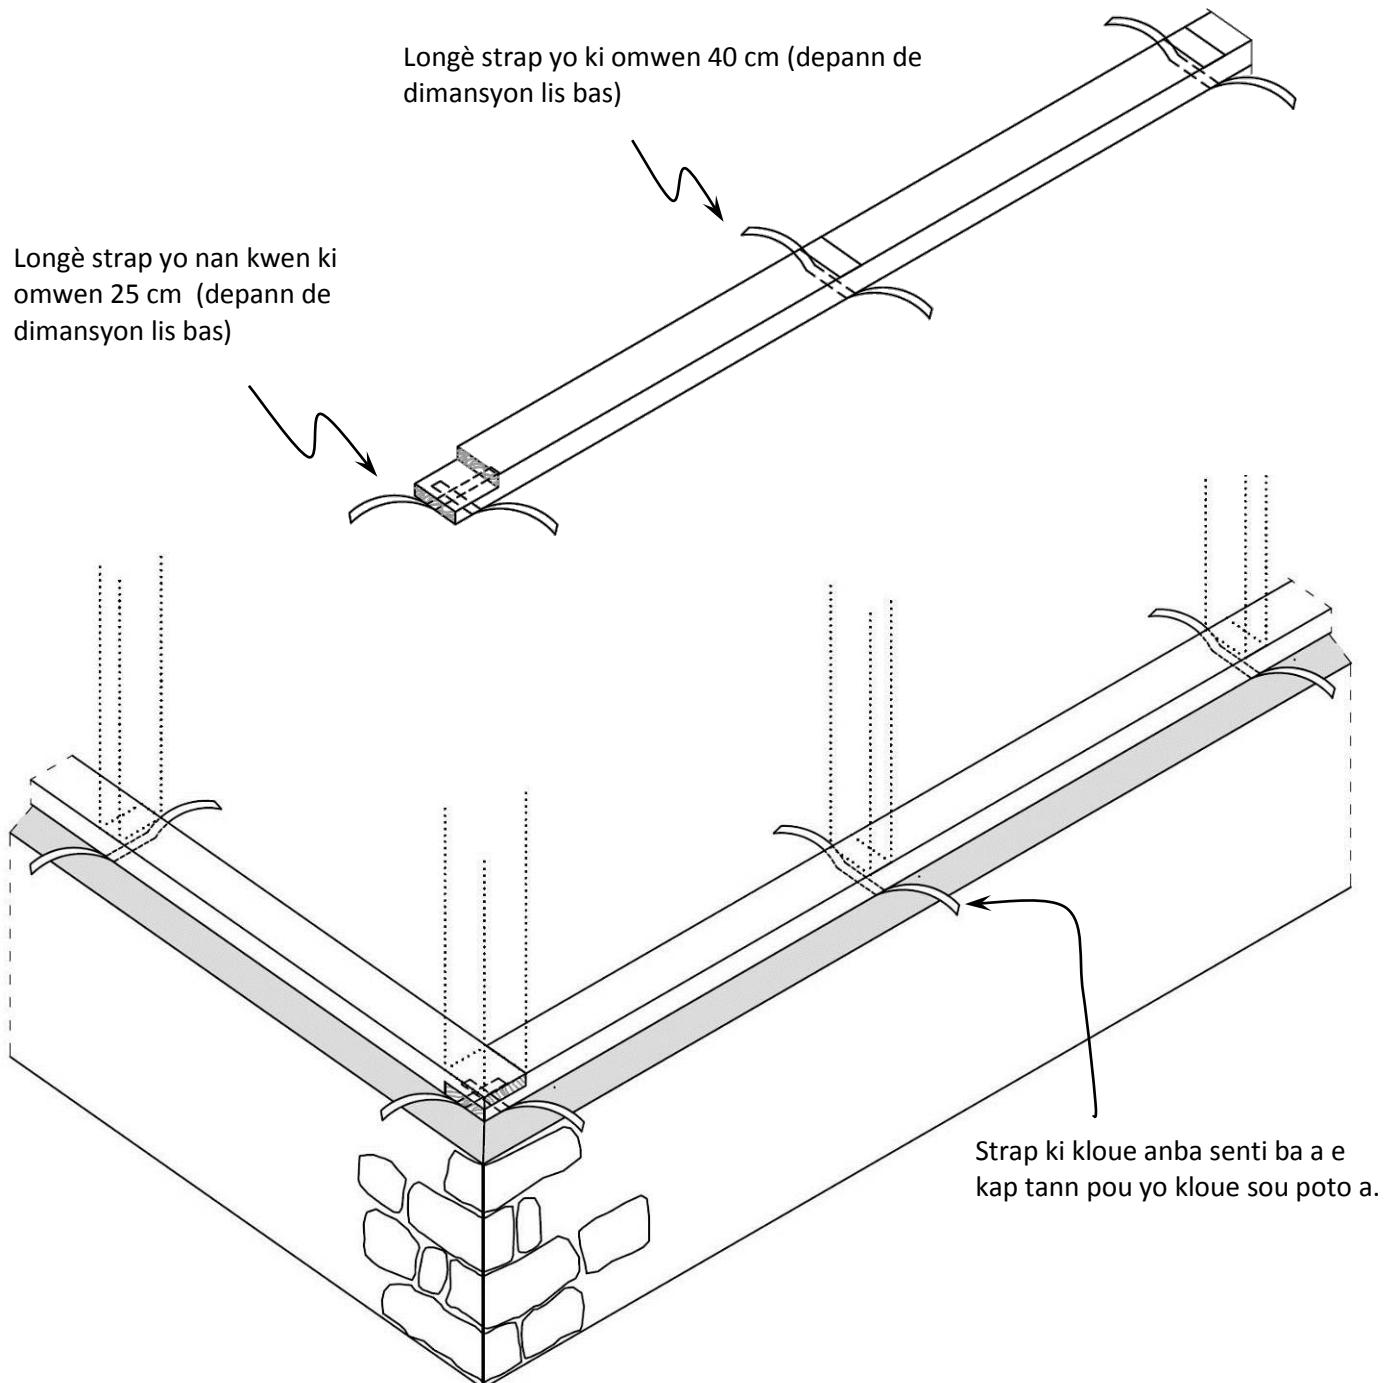

Nan peyi Ayiti a nou jwenn yon lòt jan asanblaj ki se tankou yon "**Tyè-bwa**", sa vle di se antay ki pa rive jiske mwatye epesè pyès bwa.

- Li p`mèt fè yon asanblaj tenon mòtèz avek cheviy avek poto kwen.
- Epi li pèmèt mete lis wo ki pi kout ki se tankou yon travès, **menm nivo avek lòt travès yo pou'l ka kenbe plafon an.**

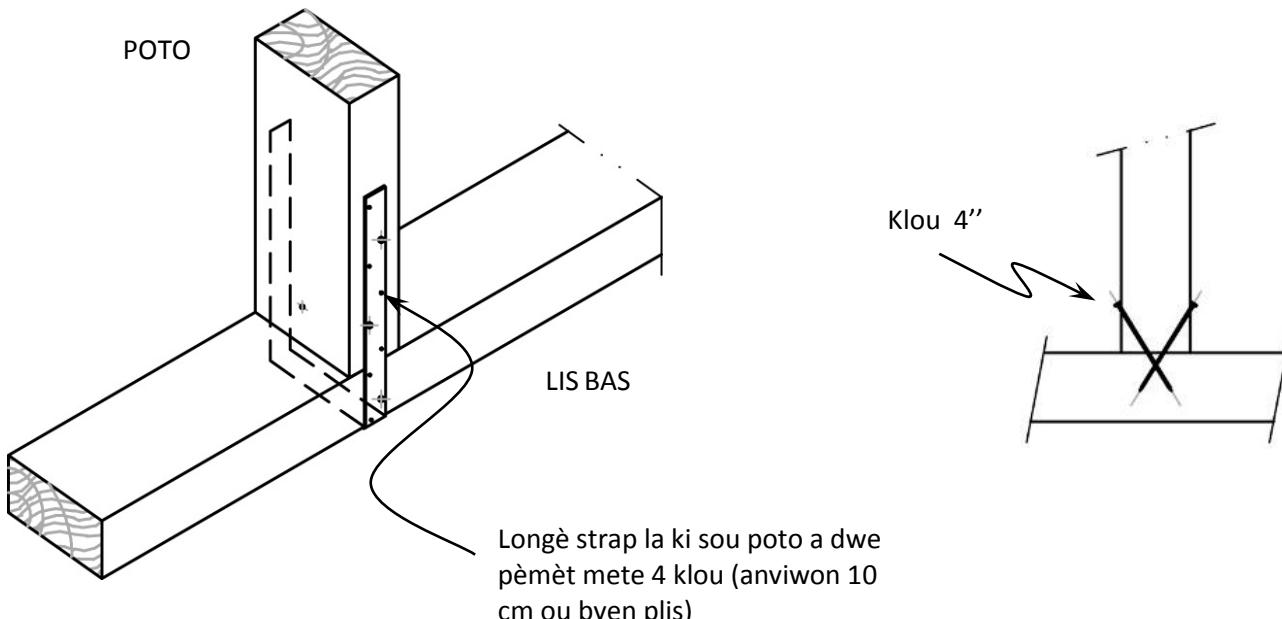

Koneksyon poto yo avek lis bas– Strap (plak metalik)

- Avan nou plase lis bas sou sol kay la, kloue stap anba lis bas kote nap mete poto yo
- Plase lis bas sou sol kay la

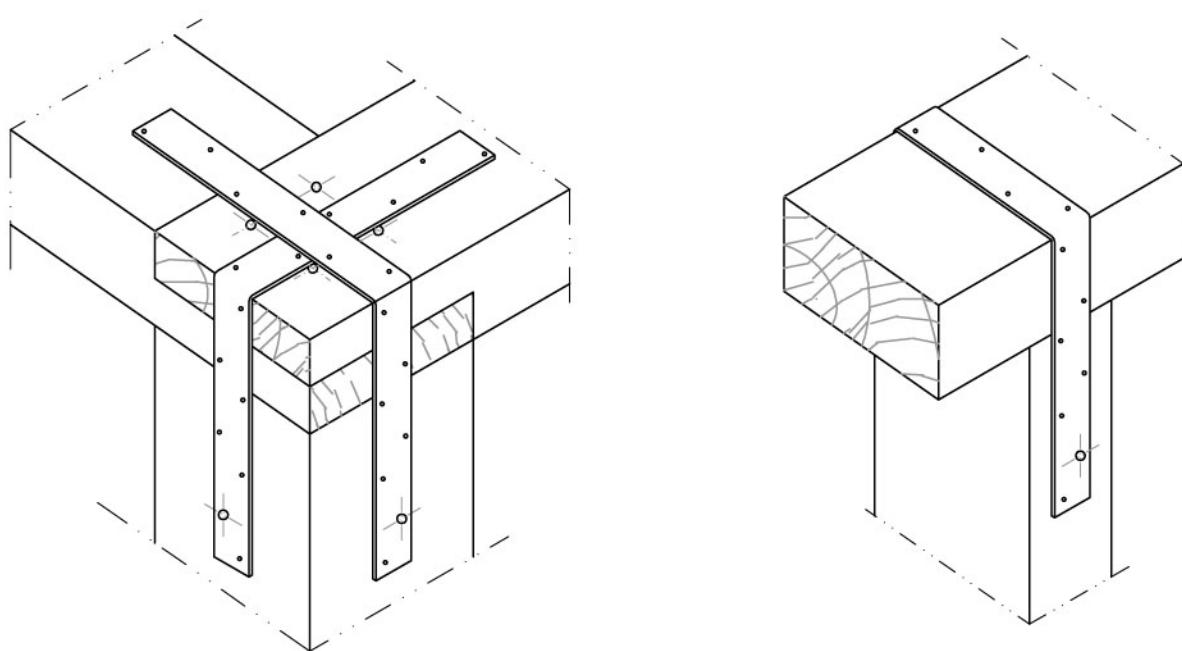

Koneksyon poto yo avek lis bas ak lis wo – Strap metalik

- Apre nou plase poto yo, kloue stap la chak bò poto a avek 4 klou anviwon.
- Fikse poto yo avek lis bas avek klou 4'' ki panche.

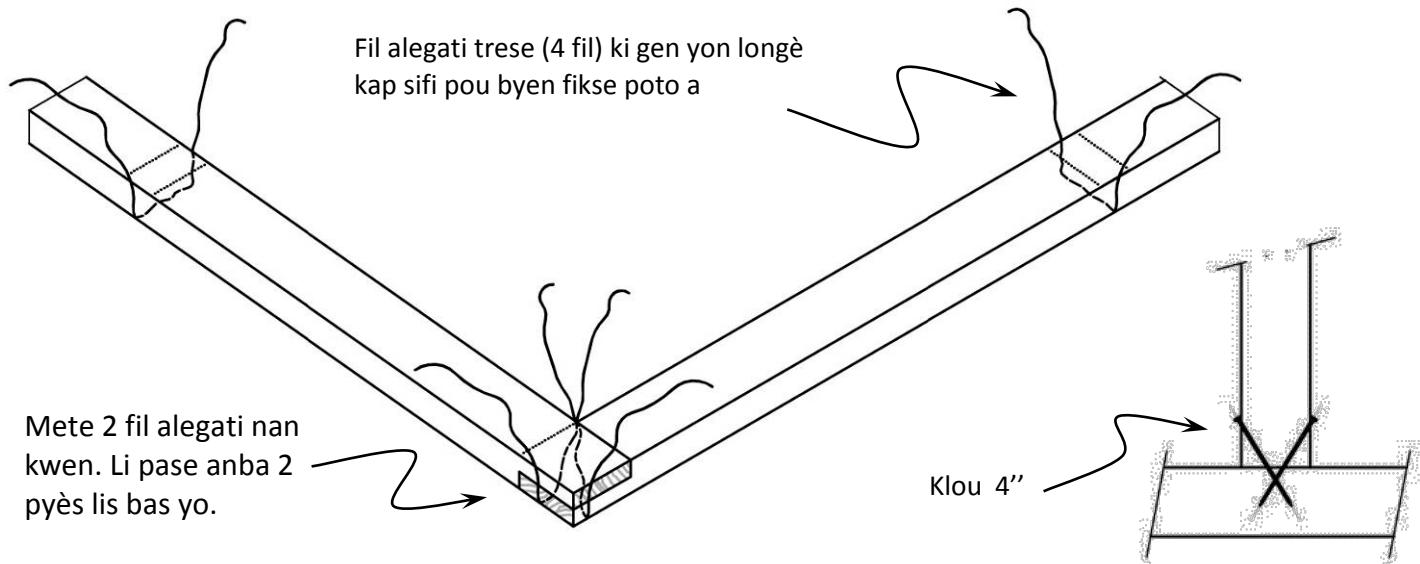

- Apre nou plase lis wo, mete strap sou li kote gen poto.
- Fikse strap yo sou poto yo menm jan nou te fikse lis bas la.

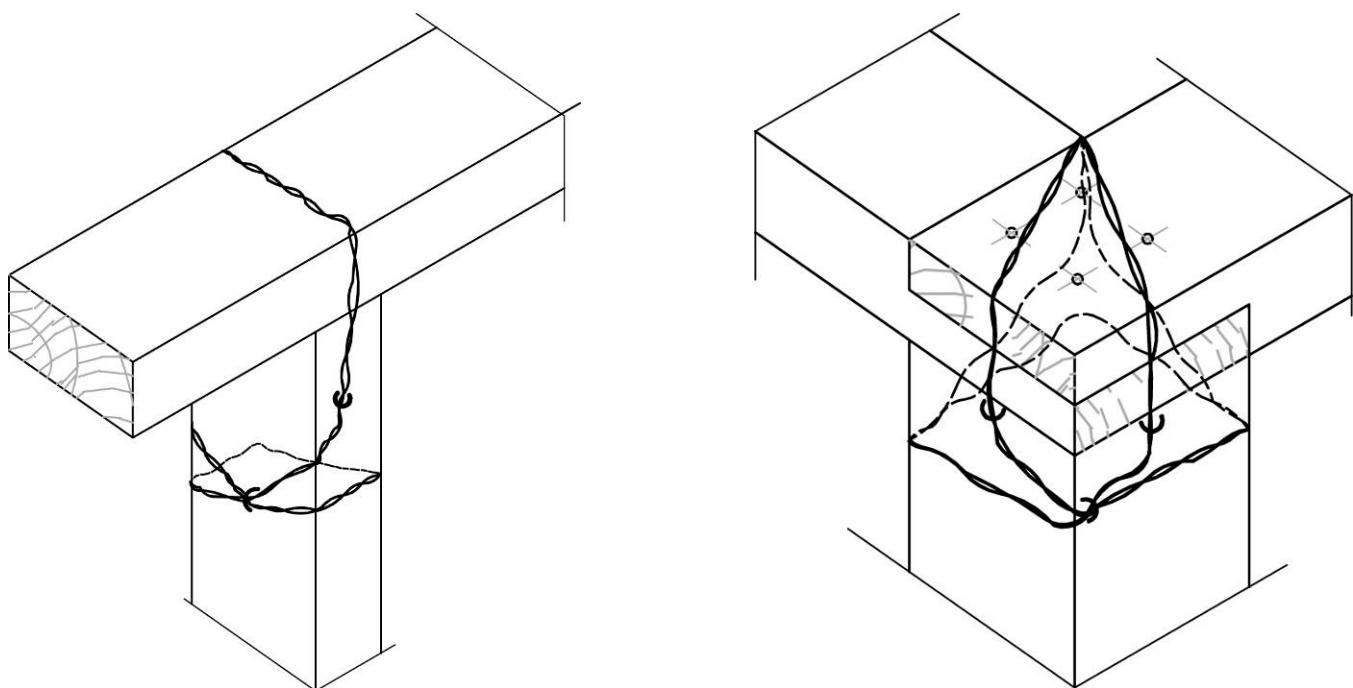

Koneksyon poto yo avek lis bas ak lis wo – Fil alegati

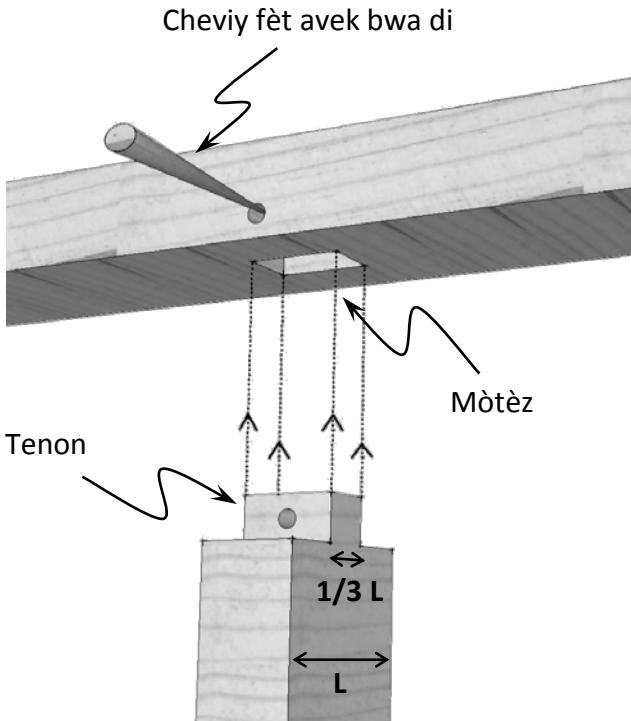

- Avan nou plase lis bas sou sol kay la, plase e kloue fil alegati trese anba lis bas kote nap mete poto yo.
- Fikse poto yo avek lis bas avek klou 4" ki panche.

- Byen tire epi fikse fil alegati sou poto a avek omwen 4 klou. Tounen tout otou poto a pou'l ka byen kenbe

Koneksyon poto yo avek lis wo – Tenon mòtèz avek cheviy

Fè yon twou avek
yon tayè oubyen
avek yon vilbreken

Jodia, moun yo konn ranplase
tenon mòtèz avek cheviy pa jan
asanblaj nou we sou foto a :

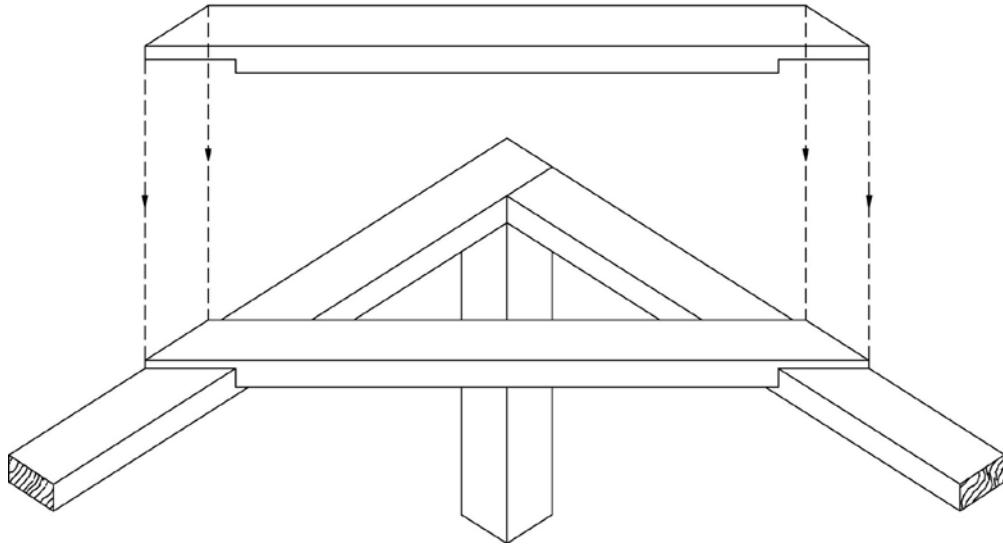

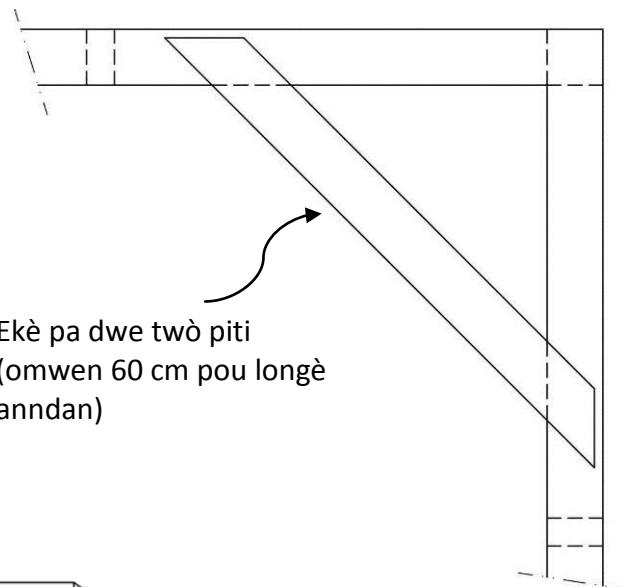

Kontvan : Ranfòsman orizontal nan kwen yo (ekè)

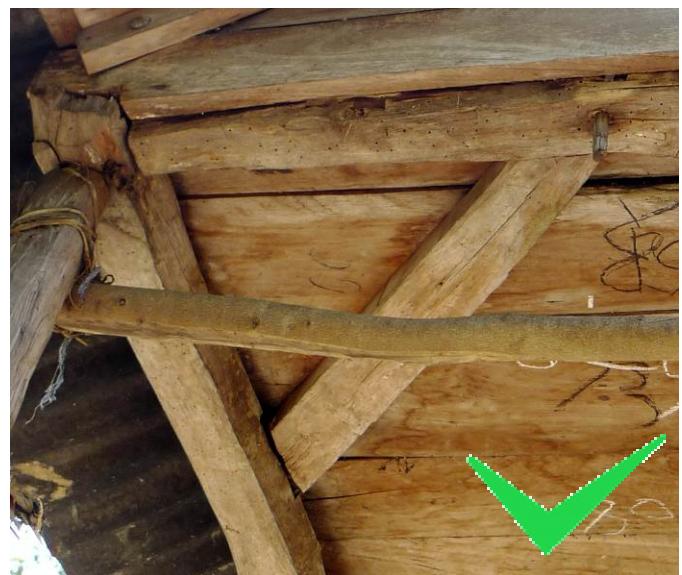

Mete yon ekè nan **chak kwen** kay la

Li pi bon pou mete ekè anlè lis wo.

Fè yon ti antay nan lis wo pou byen kenbe ekè a.

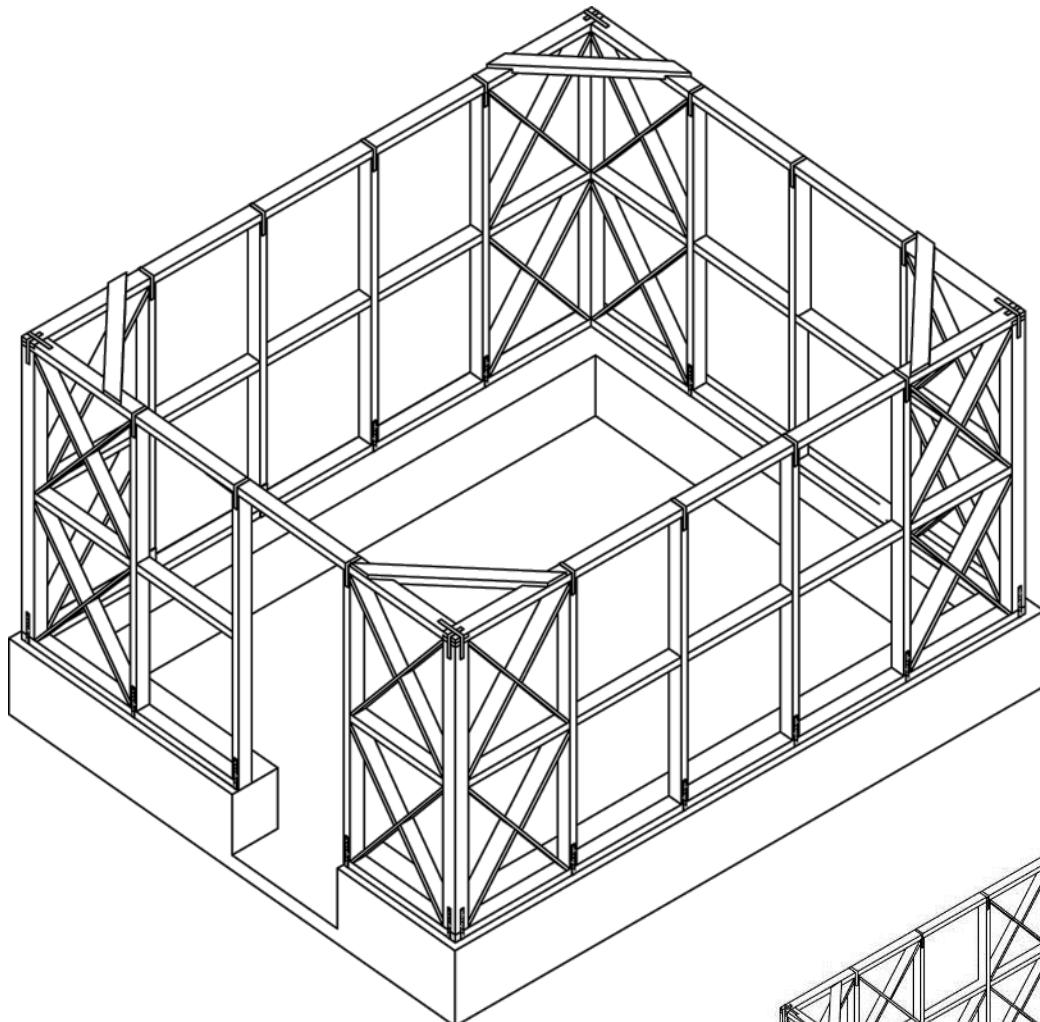

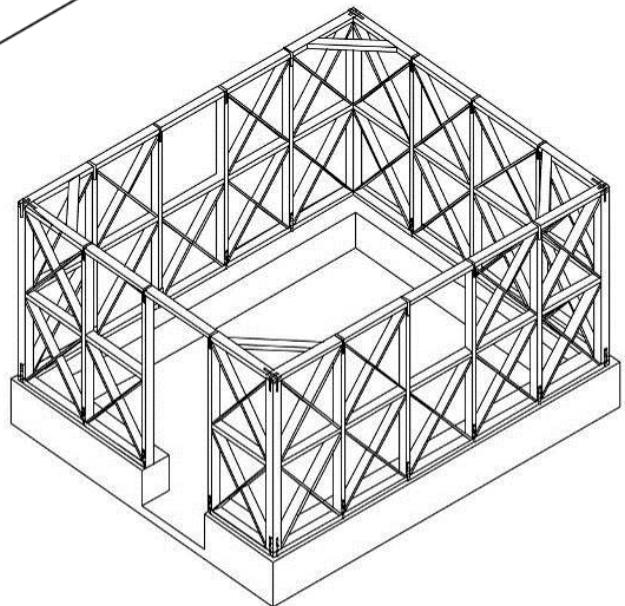

Atansyon : Ekè a twò piti epi li fikse anndan
 → Si gen mouvman, klou pa ka kenbe ekè pour kont yo selman

Kontvan : Pou panno mi an ti wòch

- Nou dwe plase kontvan omwen nan panno kwen yo.
- Lè nap fè panno an ti wòch, nou dwé divize panno nan espas ki pi piti yo. Se yon fason pou nou bloke ti wòch yo pou yo pa tonbe si gen mouvman. Kwa Saint-André yo se yon tèknik chàpant ki pèmèt sa.
- Nou pa dwe mete okenn pòt ni fenèt nan panno kwen yo.

**Solisyon MINIMÒM****PI BON solisyon**

Kontvan : Kwa Saint-André

Nou jwenn 2 jan tèknik pou mare ansanm pyès yo nan kwa Saint-André yo :

**2 mwatye dyagonal
pa fikse nan menm aks**

**2 dyagonal mare ansanm avek yon
antay mibwa**

Nou asanble de mwatye dyagonal yo nan mitan grann dyagonal la avek yon ti decalaj, sa vle di yo pa nan menm aks. Sa pèmèt kloue yo pi byen.

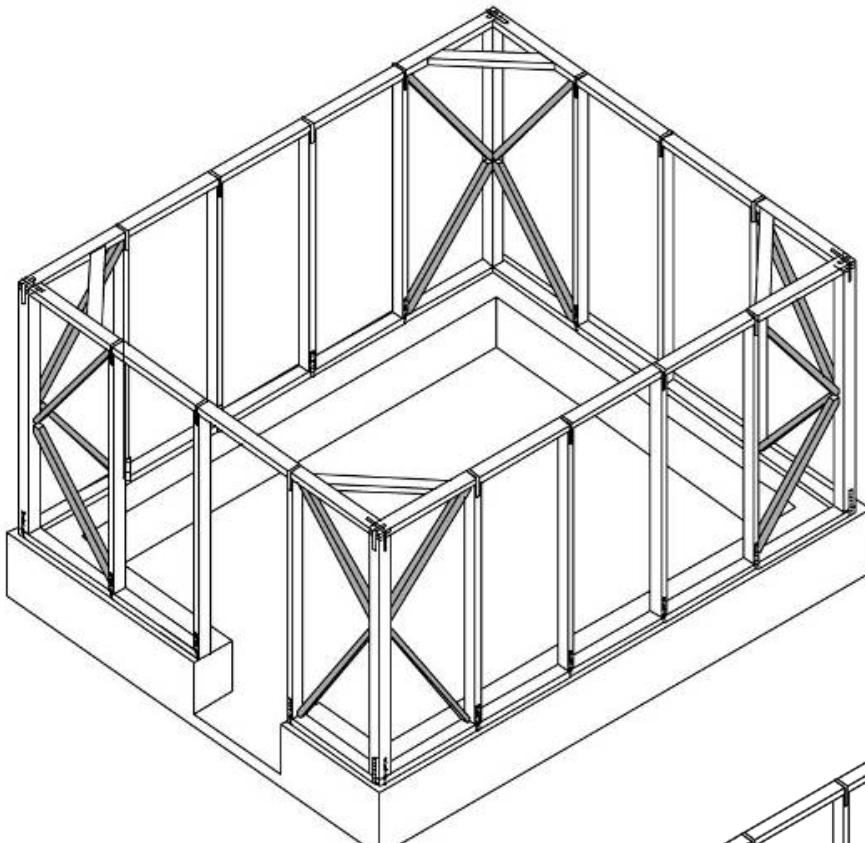

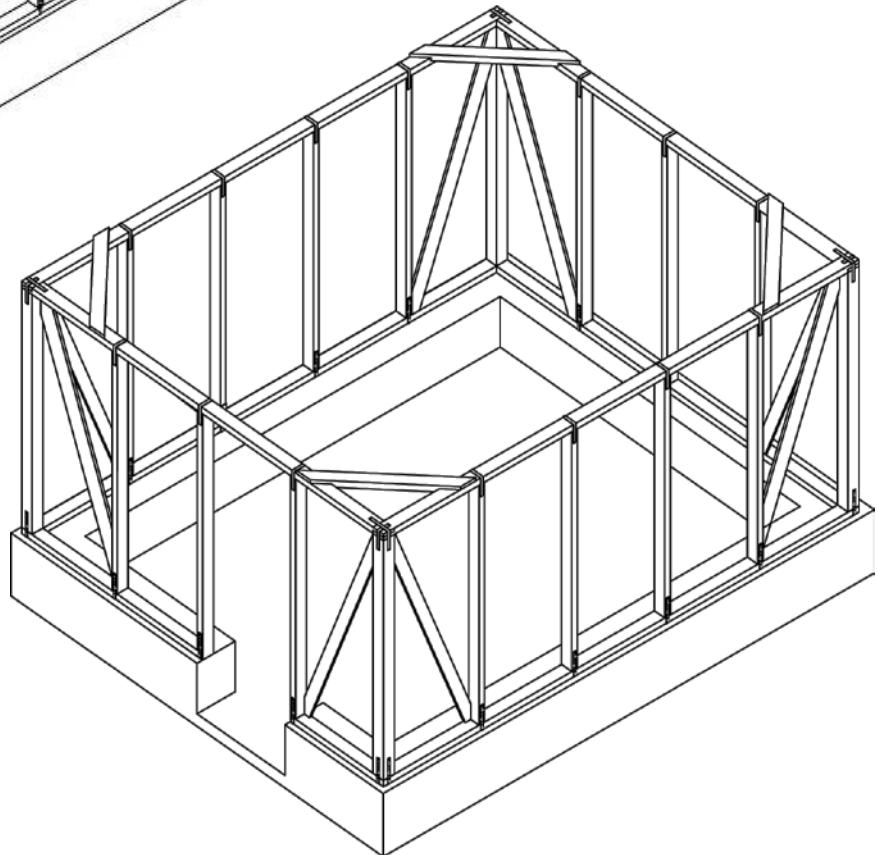

> Se yon solisyon ki pi rapid ak pi fasil.
Pa gen danje pou asanblaj gen defo.

Nou asanble de grann dyagonal yo nan mitan avek yon antay (mibwa).

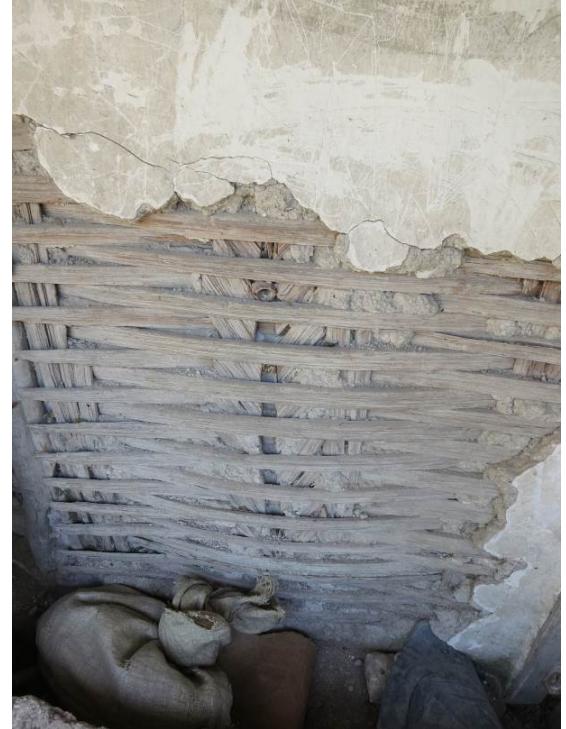

> Se yon solisyon ki ka pi bèl men ki mande anpil eksperyans avek presisyón pou nou pa gen defo nan asanblaj la e ki ka fè'l pi frajil.

Kontvan : Pou panno klisad

- Nou dwe plase kontvan omwen nan panno kwen yo.
→ Egzanp sistèm kontvan an fòm de K epi avek yon grann dyagonal
- Nou pa dwe mete okenn pòt ni fenèt nan panno kwen yo.

**Kontvan an fòm de K****Kontvan avec grann dyagonal**

7.8 – Ranplisaj / Abiyaj mi yo

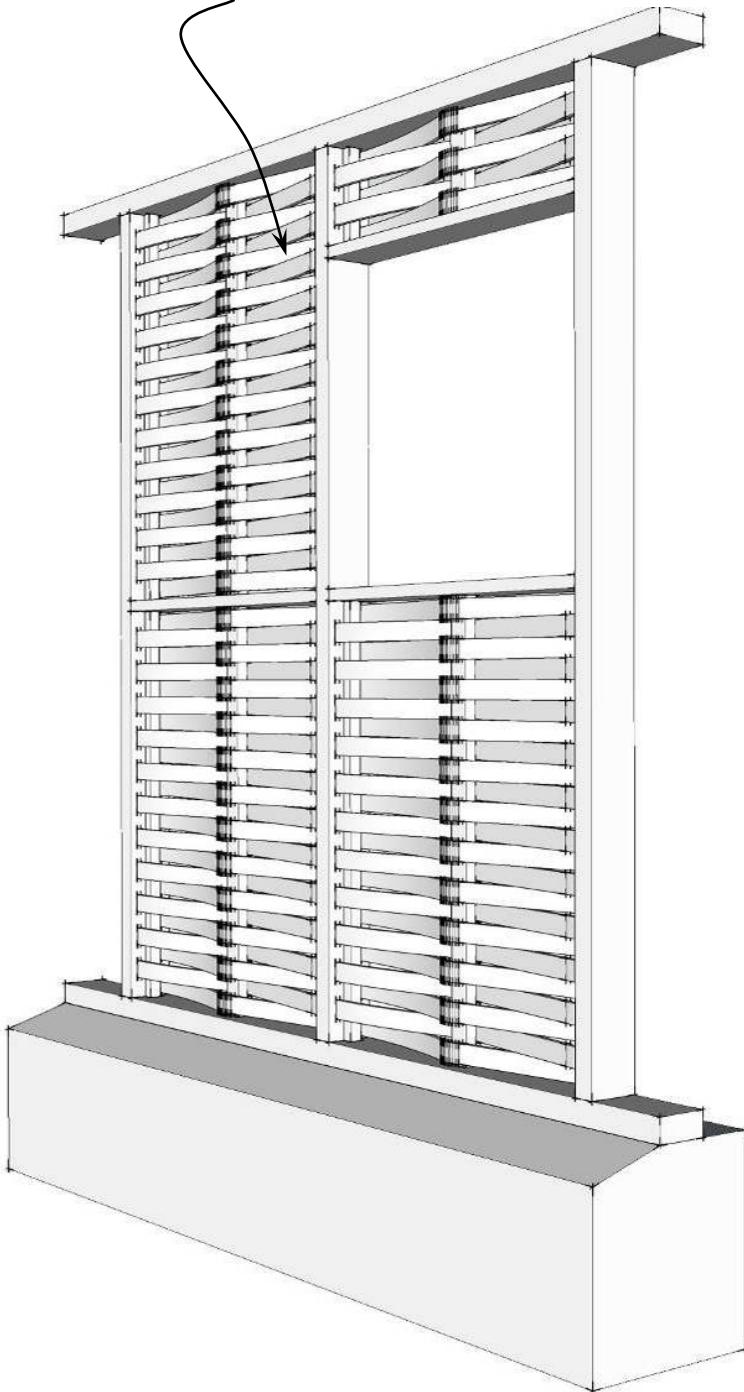

Klisad tradisyonèl

Klisad la li fèt avek lat palmis oubyen avek ti branch.

Nan peyi a nou konn mete lat yo youn kole kont lòt. Sa pèmèt dlo pa antre anndan si pa gen ranplisaj sou li ou byen si ranplisaj pa byen pwoteje avek yon andwi.

Lat yo kole youn kont lòt

Preparasyon lat palmis

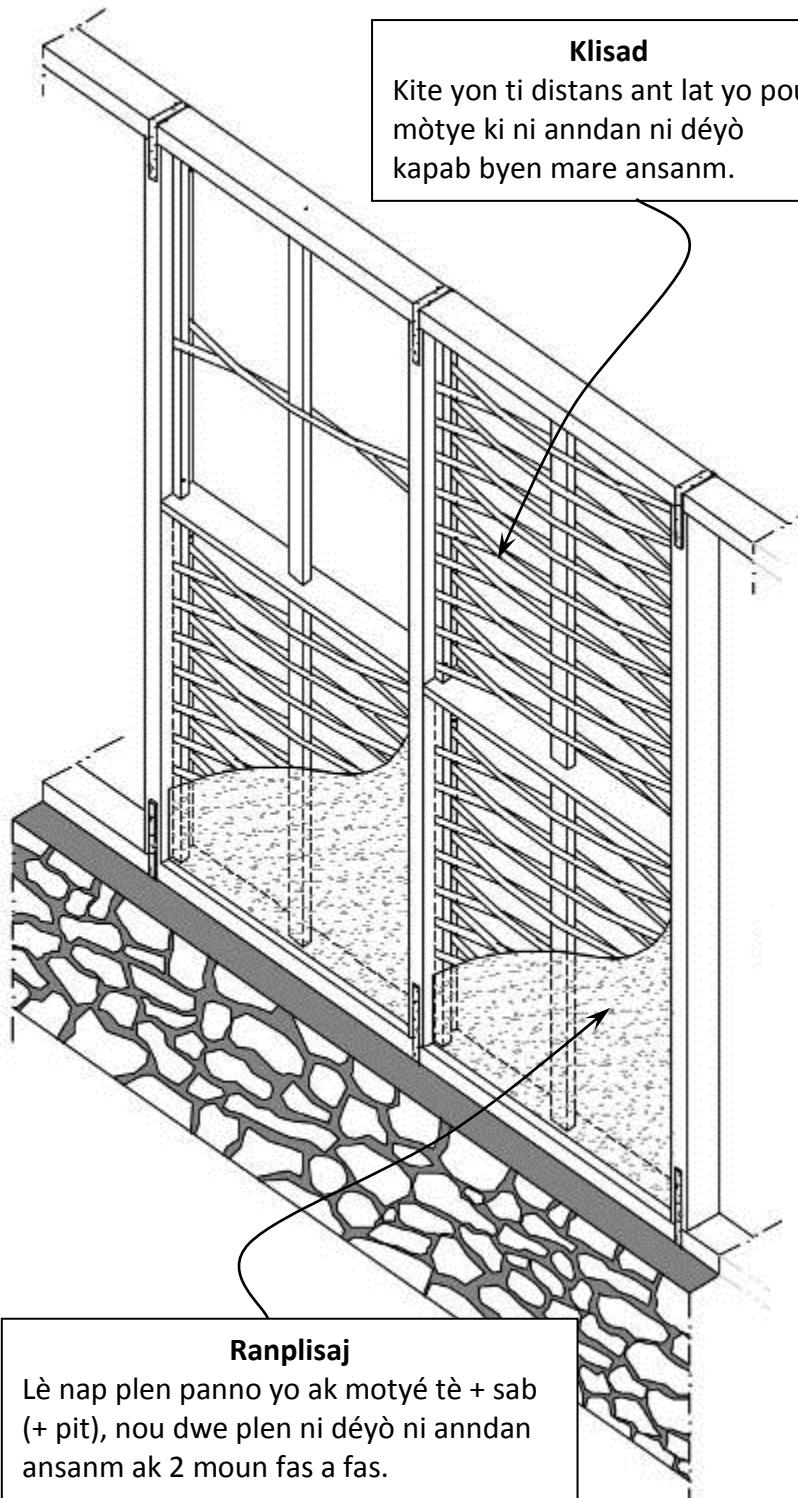

Klisad ekàte e masòn

Klisad la li fèt avek lat palmis oubyen avek ti branch.

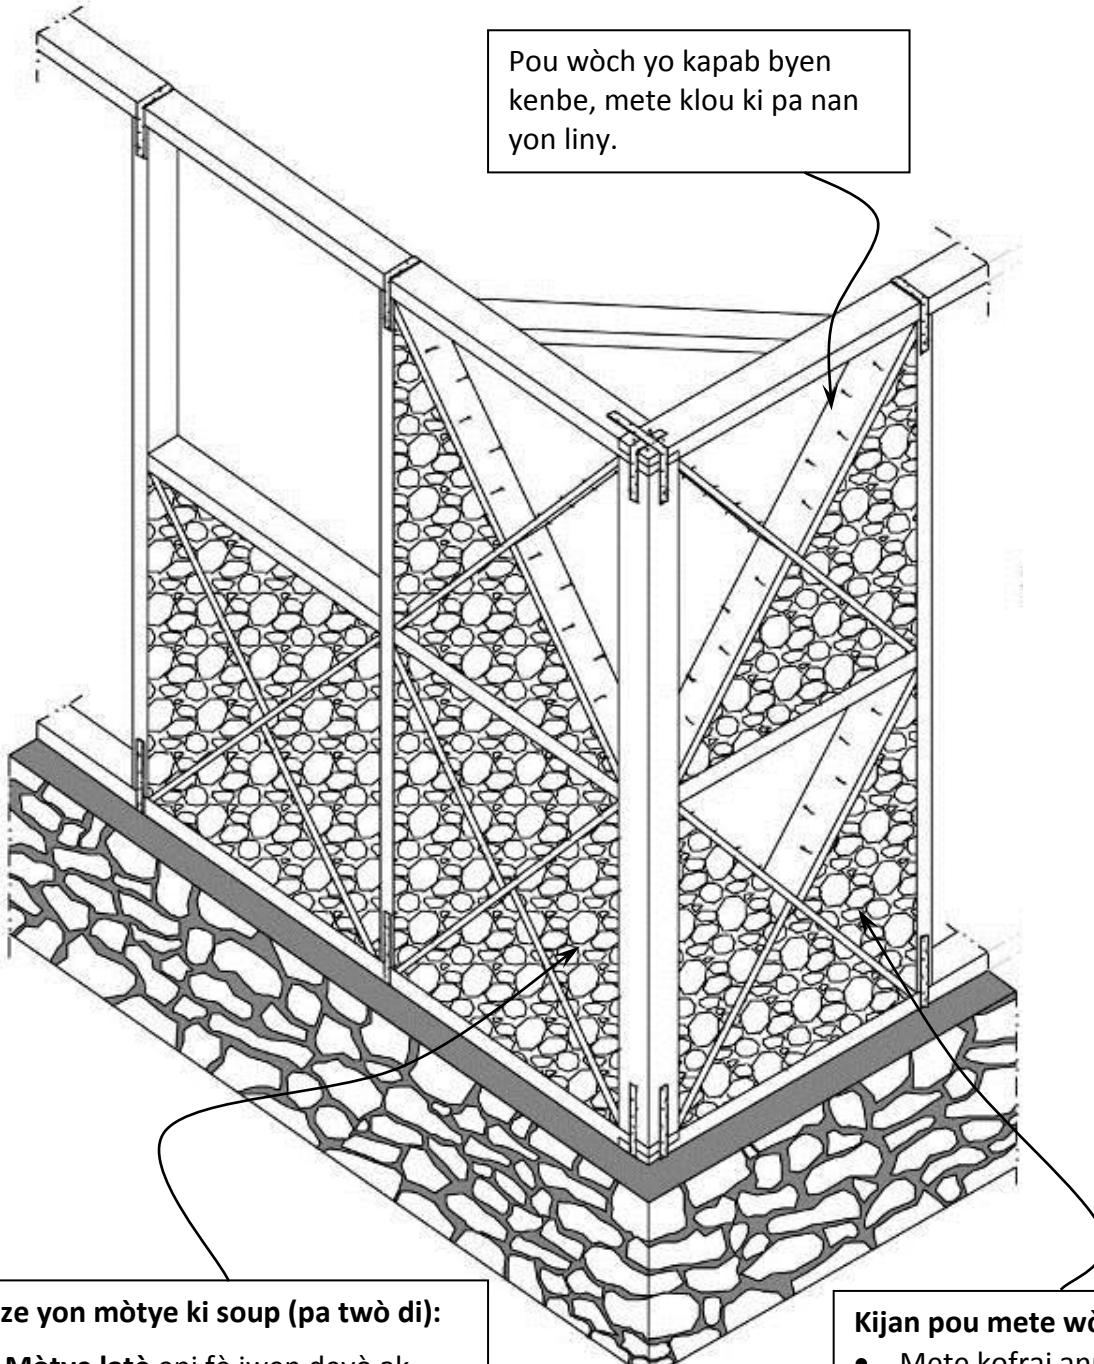

Nou ka kite yon ti distans ant lat yo pou pèmèt mòtye ni anndan ni déyò kapab byen mare ansanm.

Nan solisyon sa a nou dwe fè yon ranplisaj avek yon andwi ki ka byen reziste (avek lacho oubyen latè avek yon ti kras siman). Sa pèmèt dlo pa fè twou nan ranplisaj ant chak lat.

Ranplisaj an ti wòch

Lè nap fè panno an ti wòch, nou dwe divize panno a pou byen kenbe masonry a.
Kwa Saint-André yo bay ti triyang ki pèmèt sa.

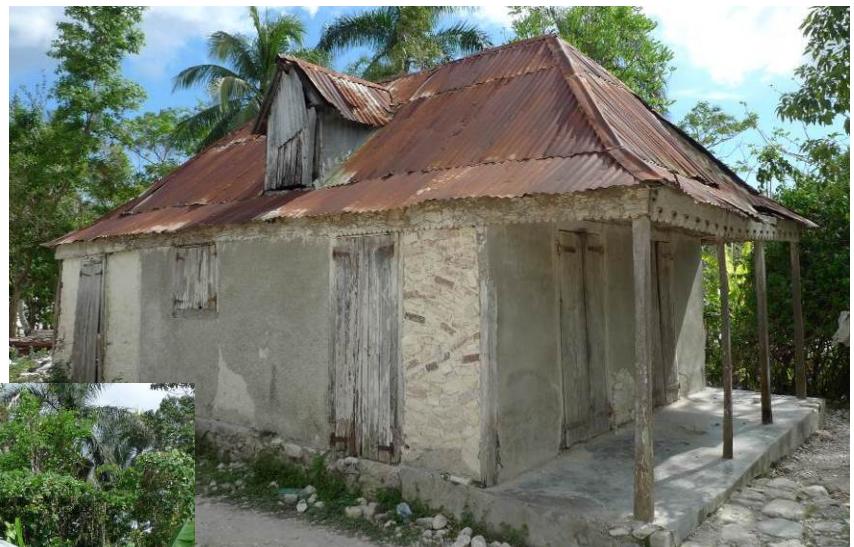

Itilize yon mòtye ki soup (pa twò di):

- **Mòtye latè** epi fè jwen deyò ak mòtye lacho oubyen batà
- **Mòtye lacho**
- **Mòtye latè** avek yon ti kras **siman**

Kijan pou mete wòch yo

- Mete kofraj anndan ki pral retire apre
- Pa mete wòch ki twò gwo
- Mete wòch byen chita
- Fè jwen ki pa epe

7.9 – Tèt kay la

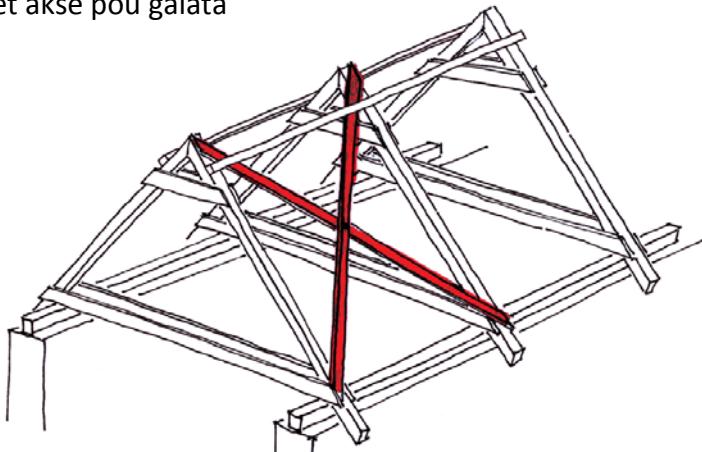

Prensip : Kontvan tèt kay la

Kontvan twati se yon sistèm ki obligatwa pou pèmèt ni chak fèm pou kont li a ni tout chàpant ansanm pa panche epi tombe. « Fe » oubyen fetyè, se yon pyès bwa ki liye chevron nan tèt, ki pa toujou la, men ki pèmèt chak fèm pa panche pou kont li a. Men li pa pèmèt tout chàpant pa panche.

Kontvan ki encline nan pant

Li pèmèt akse pou galata

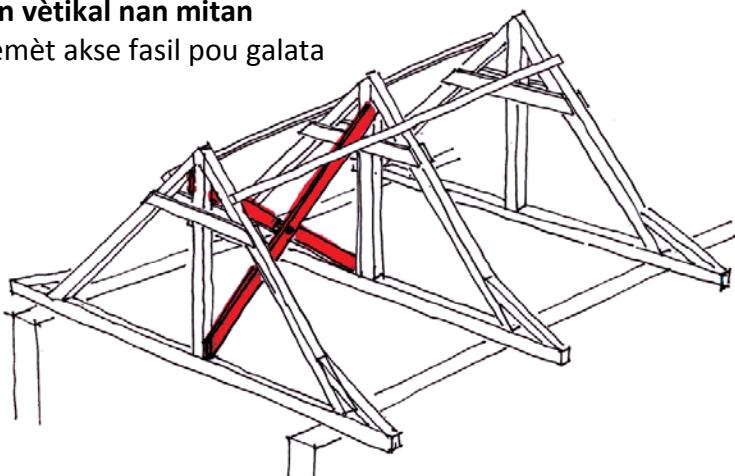

Jan tèknik kontvan nou konn
we nan peyi Ayiti a

Kontvan vètikal nan mitan

Li pa pèmèt akse fasil pou galata

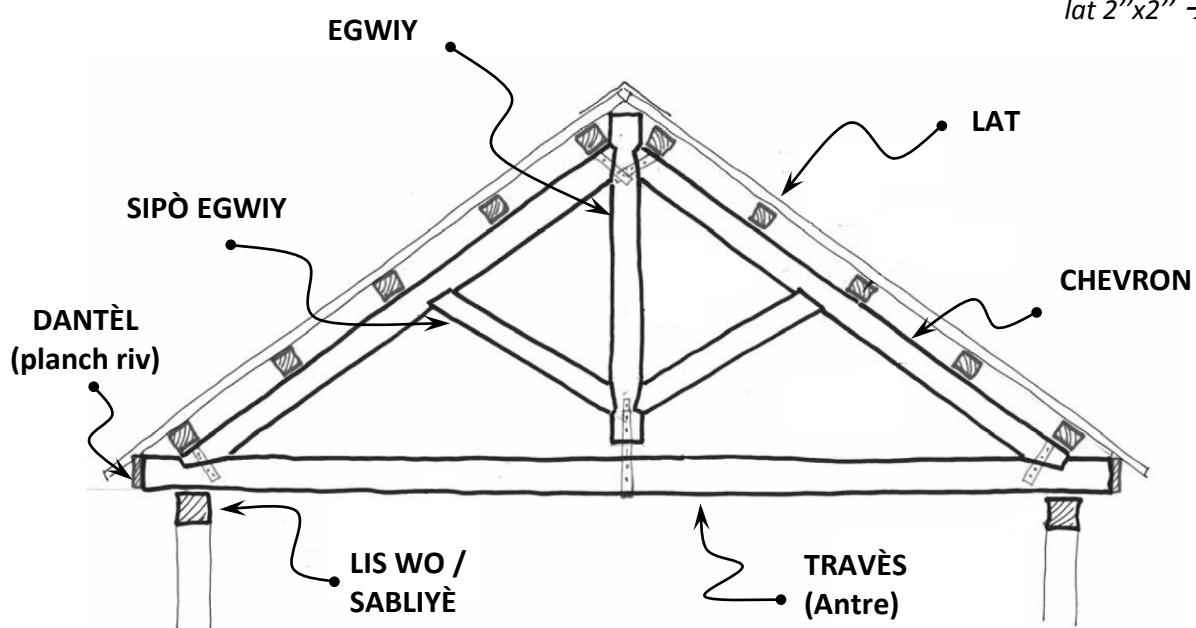

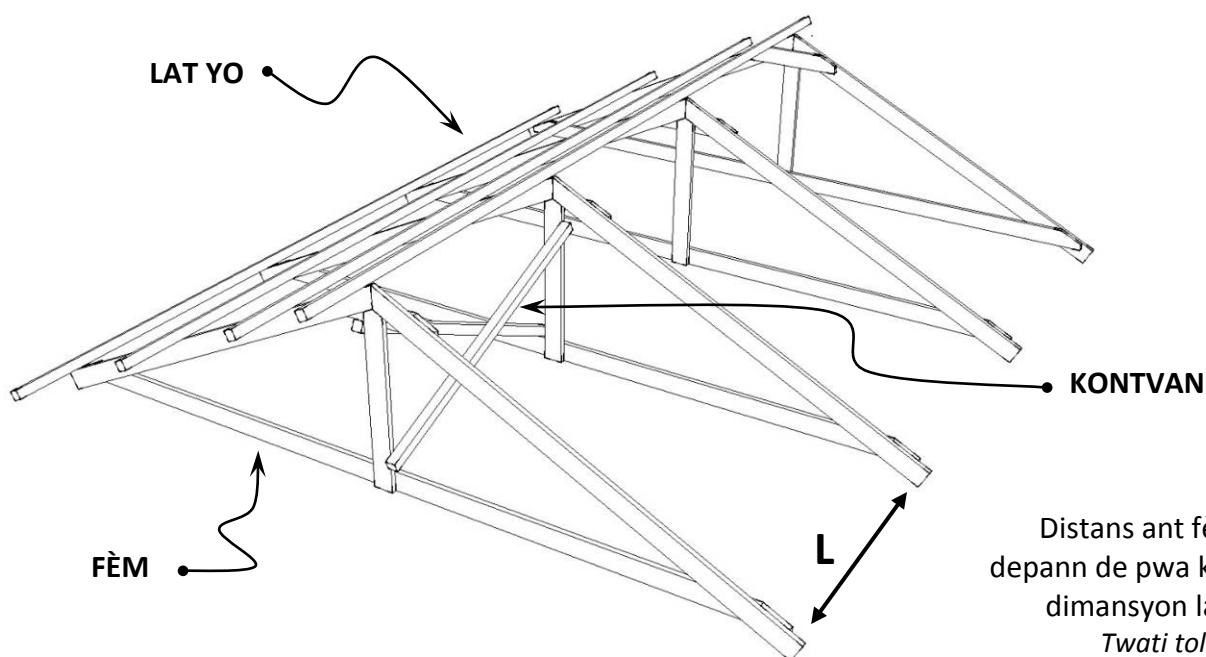

Chàpant twati 4 pant li pa bezwen kontvan ankò depi aretye yo bay kontvan deja.

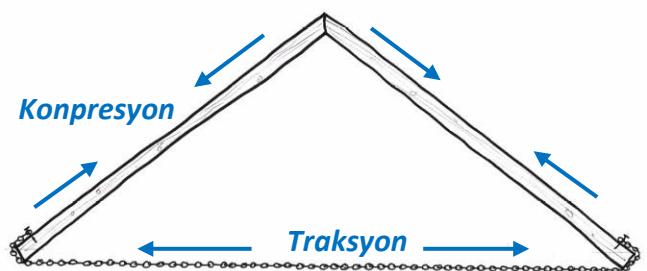

Men nou ka bezwen mete kontvan ant chak fèm ki nan mitan si pa gen fetyè.

Chàpant tèt kay la : Tout pyès ki nan chàpant la

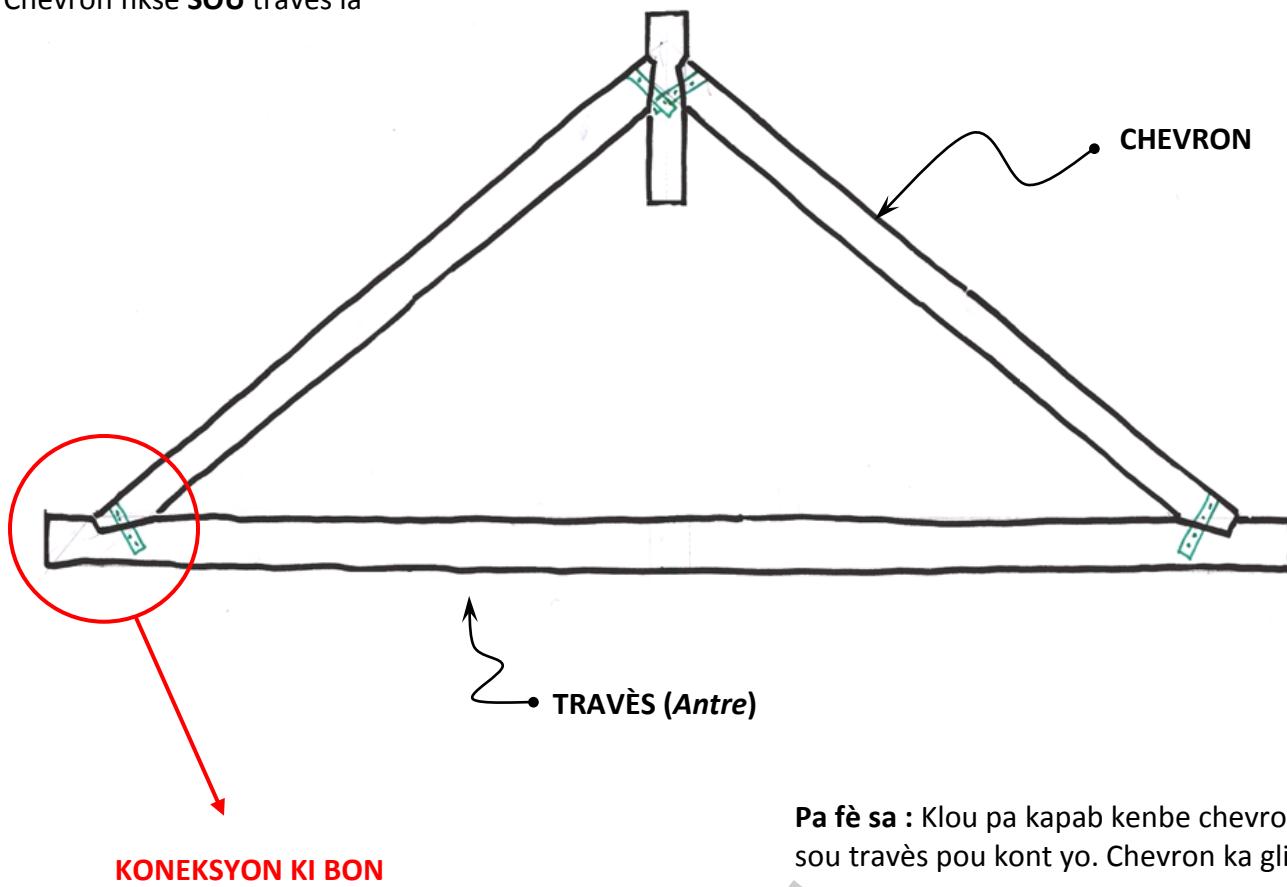

Travès la li se tankou yon chenn nan traksyon ki pèmèt chevron pa ale.

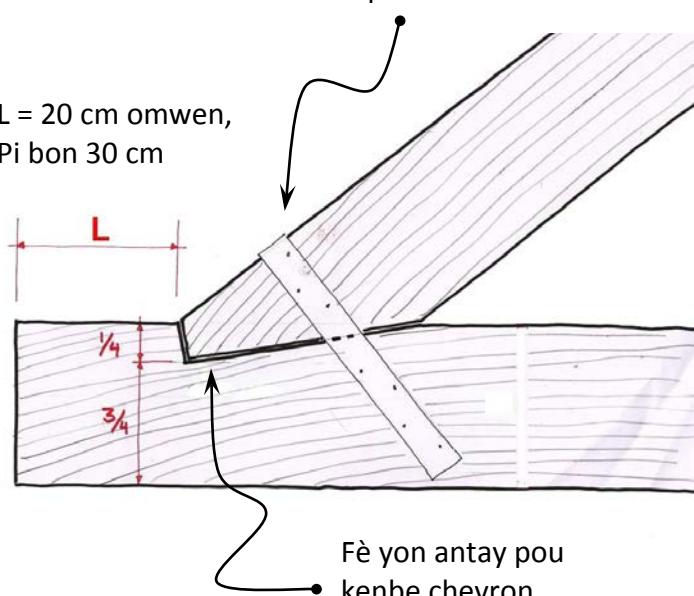

Chàpant tèt kay la : Detay koneksyon yo – Chevron sou travès

- Chevron fikse SOU travès la

Strap oubyen fil alegati pou chevron pa ka rache

$L = 20 \text{ cm}$ omwen,
 $\text{Pi bon } 30 \text{ cm}$

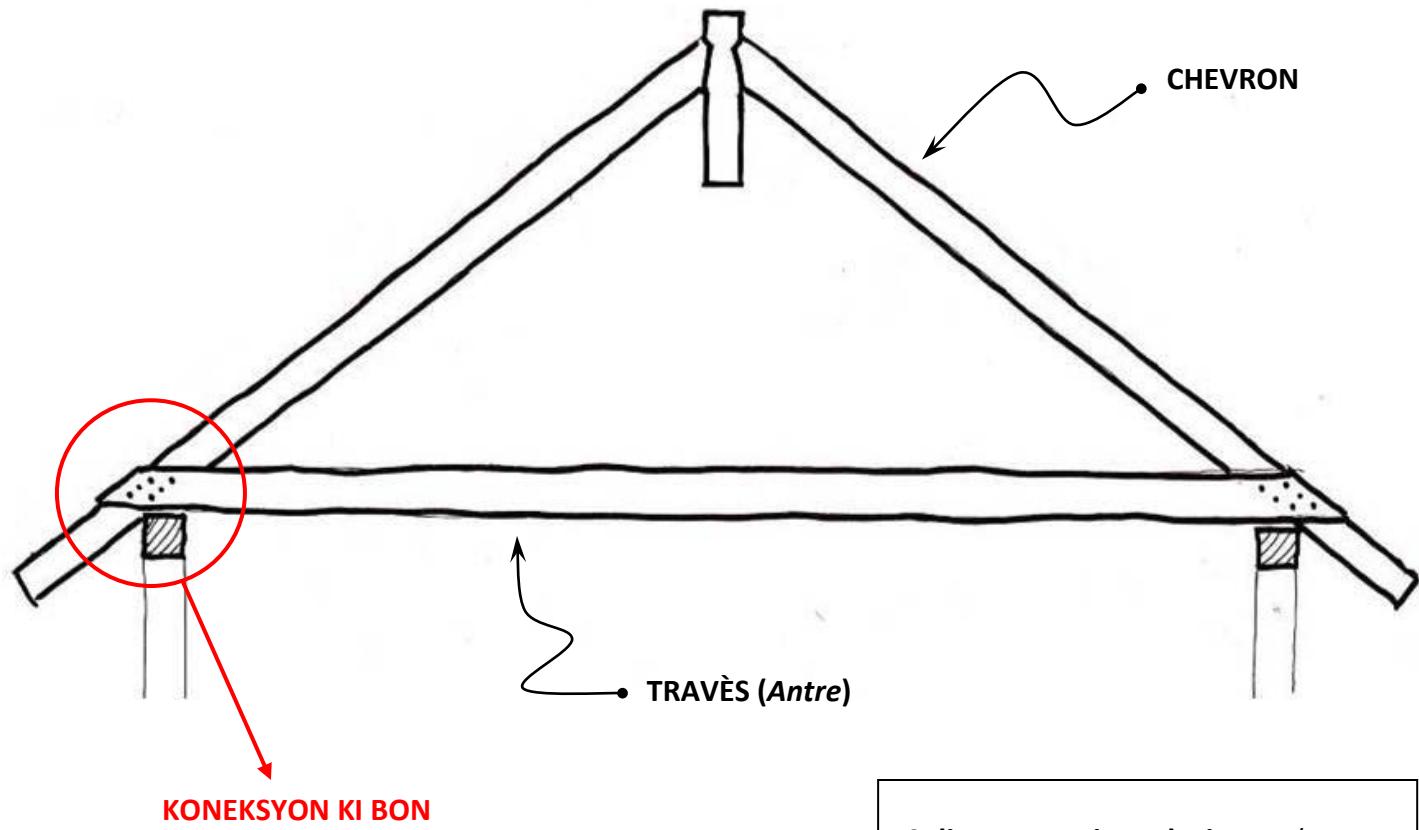

Pa fè sa : Klou pa kapab kenbe chevron sou travès pou kont yo. Chevron ka glise.

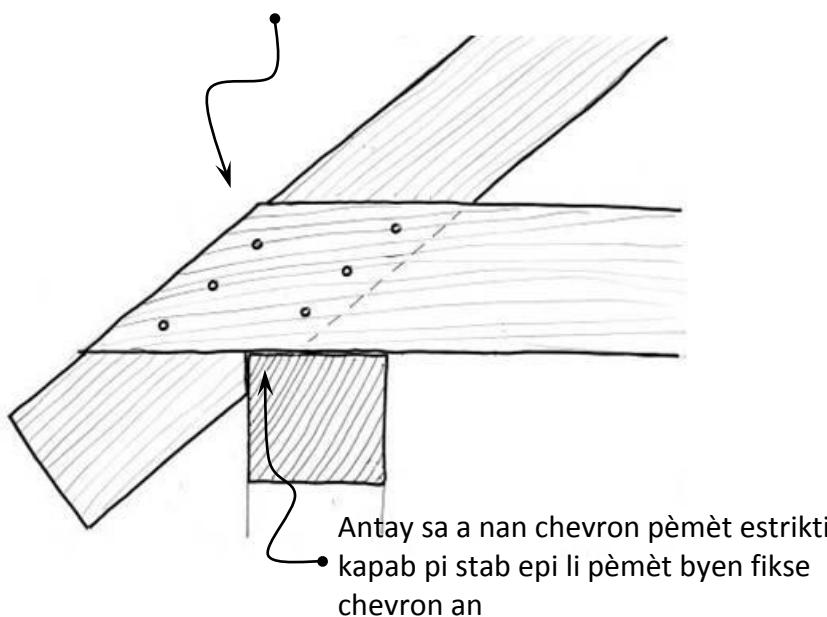

Chàpant tèt kay la : Detay koneksyon yo – Chevron kont travès

- Chevron fikse KONT travès la

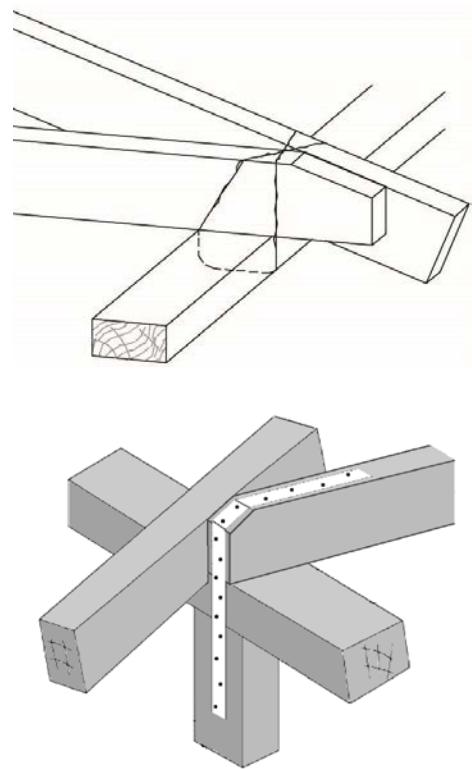

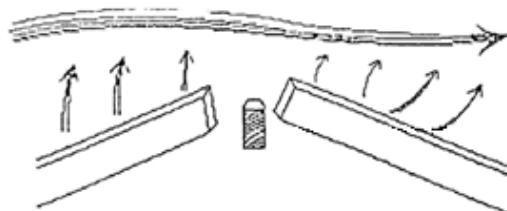

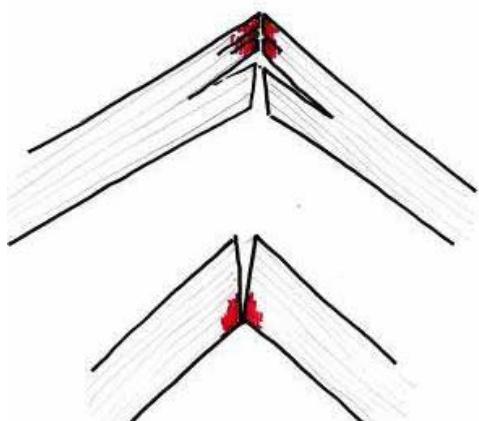

Mete omwen 3 klou chak bò.

Oubyen mete plak plywood pou koneksyon ka reziste byen.

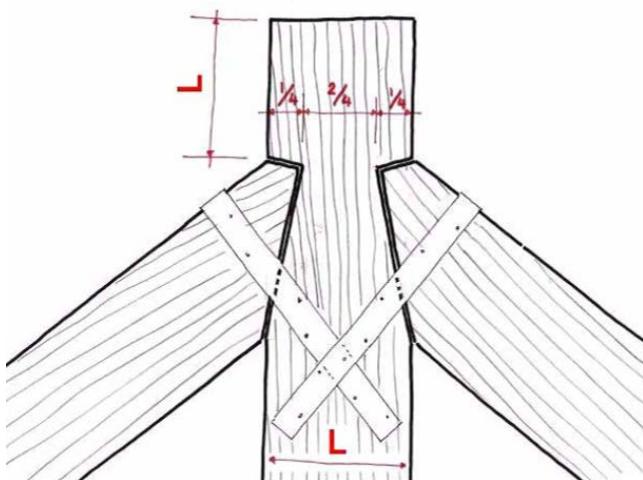

Solisyon maraj nou ka jwenn (strap oubyen mòso tol, fil alegati) :

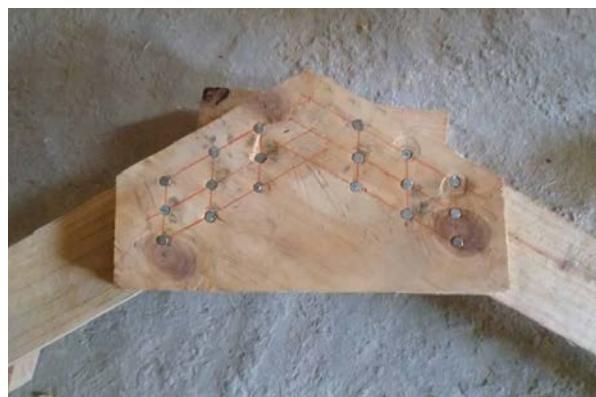

Chàpant tèt kay la : Detay koneksyon yo – Tèt chevron yo

Atansyon : Yon koneksyon nan tèt chevron ki twò senp ka frajil e ka ouvri fasil

- **Kek egzanp koneksyon nou ka fè nan tèt chevron :**

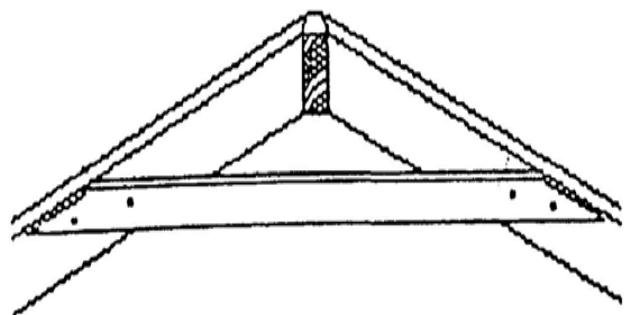

Ranfòsman koneksyon an ak planch (plywood)
→ Sa pèmèt mete anpil klou

Koneksyon chevron avek fetyè oubyen egwyi
> Antay epi sistèm maraj yo (strap, mòso tol, fil
alegati) ki pèmèt li byen reziste

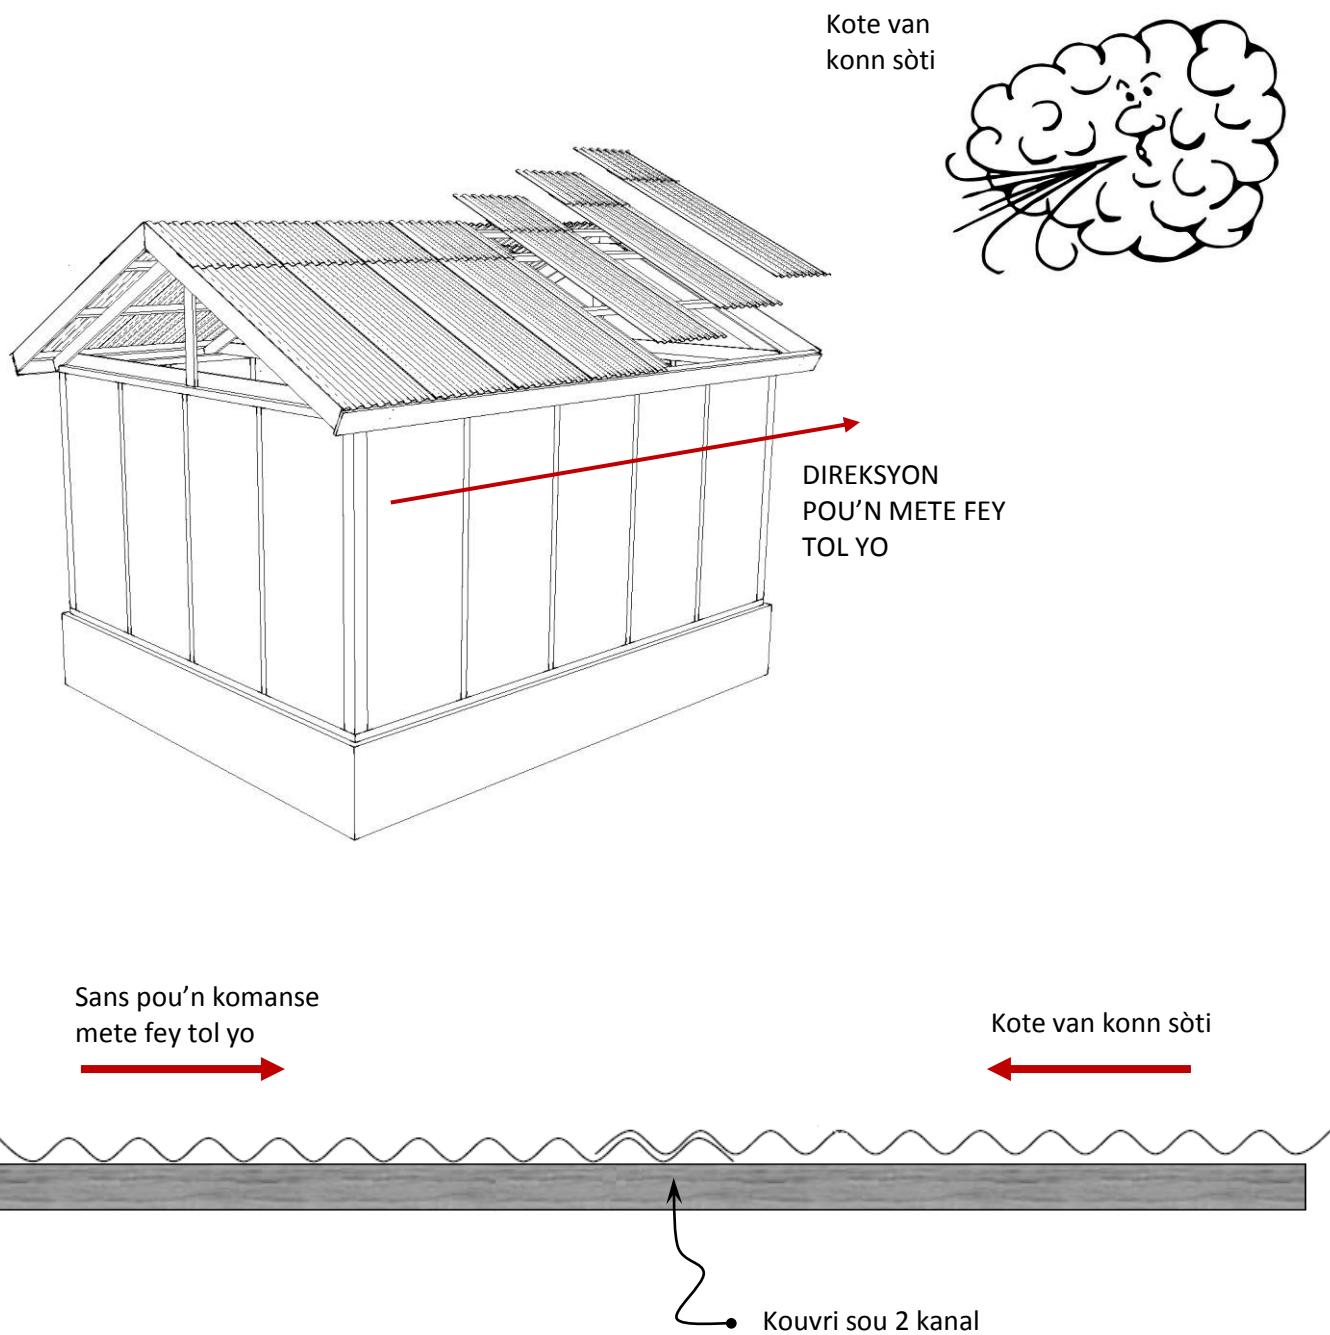

Ranfòsman koneksyon an avek yon ranfò
orizonttal
→ Sa pèmèt koneksyon pa ka ouvri fasil

Kouvèti : Direksyon poz tol ak rekouvreman fey tol yo

Komanse mete fey tol yo youn apre lòt kote opoze avek kote ke van konn sòti.
Sa pèmèt van fò pa rache fey tol yo fasil.

Kouvèti : Recouvreman ak fiksasyon tol yo

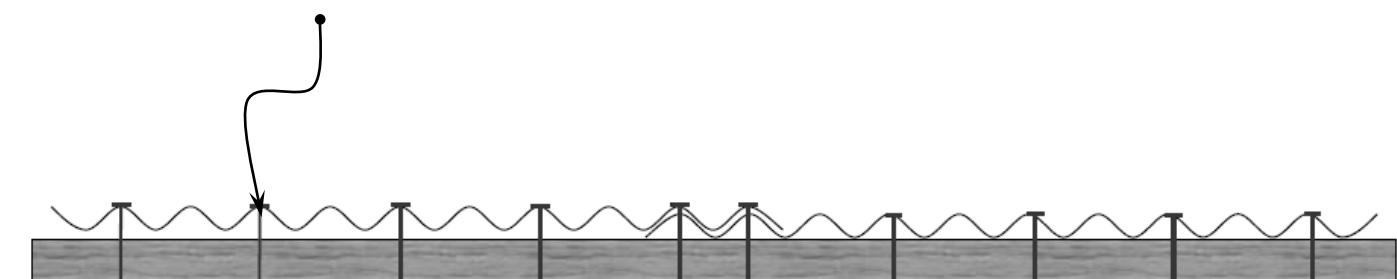

Distans ant chak lat :
80 cm maksimòm

Fey tol kouvari lòt sou omwen
20 cm jiske 40 cm (sa depann
de ki pant)

Klou tol yo : fey
kawoutchou pèmèt dlo
pa antre

Mete yon klou chak 2 kanal.
Toujou mete li sou do kanal la.

Nan yon bwa ki mou, nou ka pliye
pàti klou ki depase.

7.10 – Tretman sifàs

Rejwentwayaj masonry wòch

Pou ki sa li pi stab :

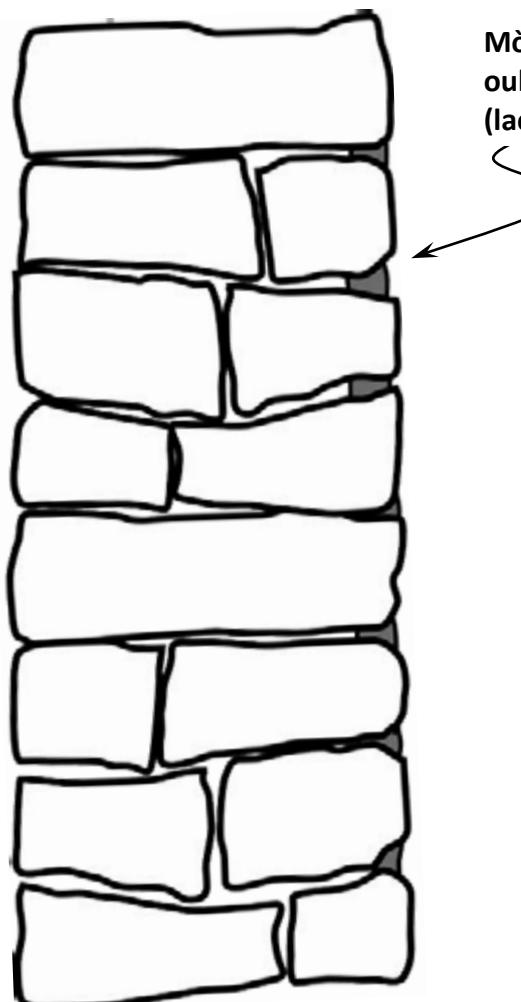

Lè nou fè jwen yo apre masonri, nou ranpli twou yo ant wòch yo. Sa pèmèt kenbe pi byen wòch yo. Mi a vinn pi stab.

Pou ki sa sa pèmèt reziste pi byen avek yon tranbleman tè :

Lè jwen kraze li pèmèt disipe enèji tranbleman tè a.

Pou ki sa sa pèmèt mi a dire plis tan :

Fè jwen avek mòtye lacho ou byen batà pèmèt pwoteje mi a. Nou bezwen mwens reparasyon.

Andwi deyò – Sistèm andwi ak ki jan pou'n mete'l

Sipò :

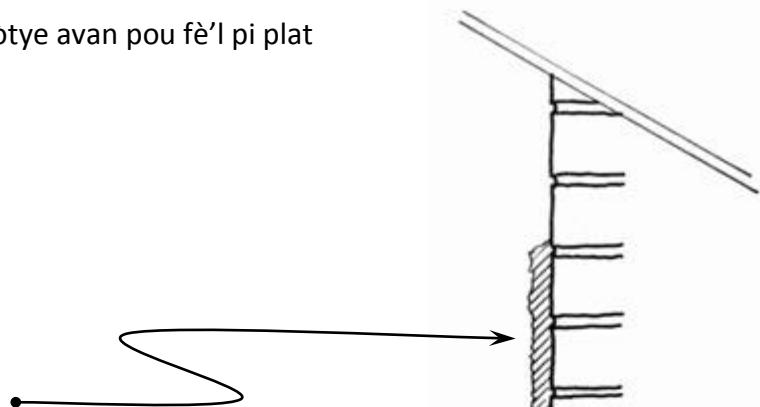

- Mi dwe byen plat e regilye oubyen itlize mòtye avan pou fè'l pi plat
- Mi dwe byen sèk

Preparasyon sipò :

- Frote epi retire pousyè
- Mouye mi a anpil

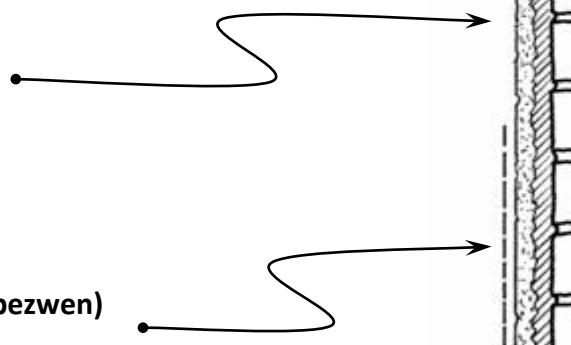

Premyè kouch : « Krep » - 8 jiske 20 mm

- 1 Lacho / 3 Sab
oubyen 3 Lacho / 1 Siman / 12 Sab
oubyen 1 Siman / 8 Sab
- Pase sab nan krib krepisaj (≈ 5 mm)
- Fè sifàs plat
- Grate mi avan li finn cheche (ak yon bròs metal oubyen ak klou)
- Tann pou mi a byen chech

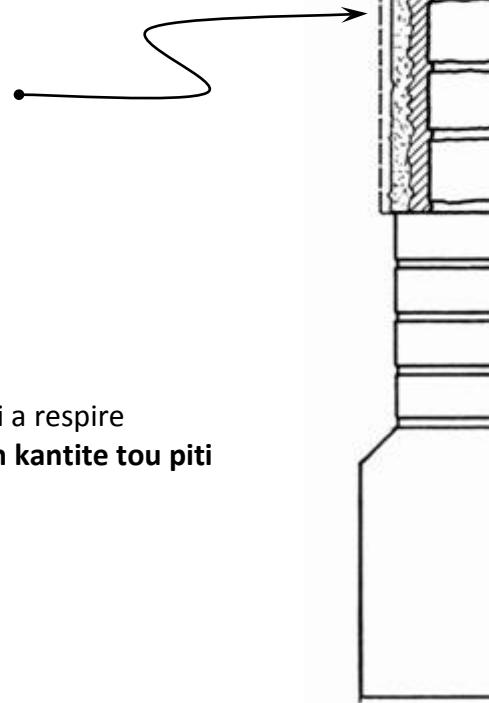

Dezyèm kouch : « Andwi / Bè » - 4 jiske 8 mm

- 1 Lacho / 3 a 4 Sab
oubyen 1 Siman / 7 Sab / 2 Tè finn
- Pase sab nan crib bè (crib fen)

Twazyèm kouch : « cholaj / badijon » (si nou bezwen)

- 1 pàti Lacho / 5 pàti dlo (premyè kouch)
- 1 pàti Lacho / 3 pàti dlo (dezyèm kouch)

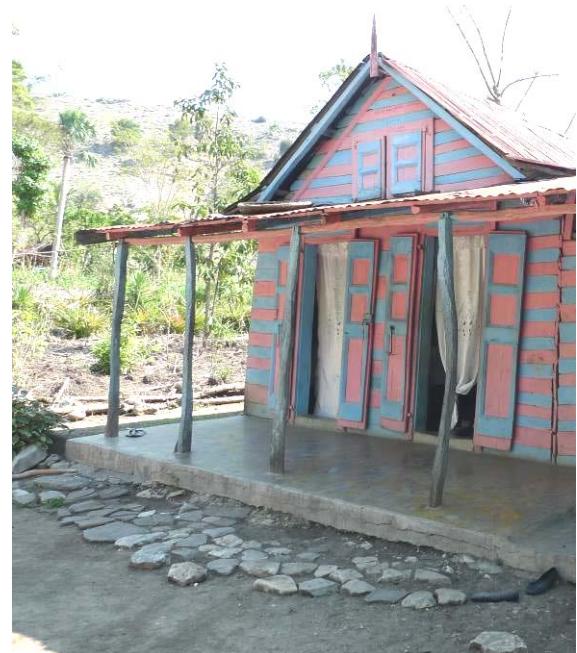

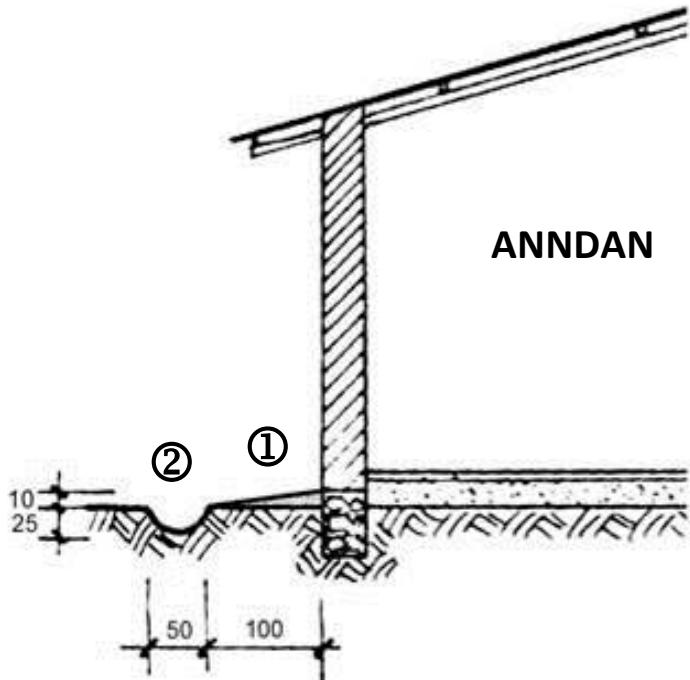

Sa nou dwe byen sonje :

- Mòtye lacho se sa ki pi bon, li pa twò di e li pèmèt mi a respire
- Si pa gen lacho, nou mèt itilize siman men mete yon kantite tou piti sèlman.

7.11 – Tretman alantou kay la

- ① Tali a : Pant fèt ak latè foule. Nou ka mete sou li yon materyo pou pwoteje li (wòch plat, galèt, brik, etc.)
- ② Kanal pou evakye dlo lapli

Tretman nou fè sou pant tali a dwe **pèmèt tè anba respire** pou dlo anndan ka chape fasil.
