

# What's in the pipeline for the future of UK energy?

Natural gas is a reliable and sustainable energy source. It can play a key part in meeting growing energy needs, while reducing CO<sub>2</sub> emissions. The gas reserves are sufficient to meet Europe and The UK's demand for decades to come, and resources are available right now. Be enlightened at [goodideas.statoil.com](http://goodideas.statoil.com). There's never been a better time for good ideas.
