

Maintenance Instructions Malmsten OP Gratings®

Material

Resistant to chlorine, salt water, as well as microorganisms and bacteria. Easy to keep clean.

Malmsten OP-Gratings® are made of UV-resistant PE polyethylene and are 100% recyclable. It is easy to lift each section with Malmsten grating tool (included) and clean underneath.

Maintenance Instructions

Malmsten OP Gratings® have a strong and smooth surface finish with a low roughness factor, which quickly removes water and dirt particles. Malmsten OP Gratings® is therefore easy to clean and requires minimal maintenance. Cleaning takes place using lukewarm water and a mild detergent or soap. The gratings can also be treated with descaling agents for household use.

Recommended interval cleaning

Daily: Rinsing with fresh water (not pool water) and subsequent wiping must be done daily.

Yearly: For increased longevity, professional cleaning is recommended once a year.
Contact Malmsten for further information.

Note: High-pressure washing is not permitted. The gratings must be checked once a month so that no warping, cracks or breaks have occurred. If a grating section is defective, it must be replaced immediately.
