

## 10 reasons why play is important

The game is important for refining your children's communication skills. The 10 key reasons for this are as follows.

Play laid the foundation for reading and writing skills. Through the game, children learn to make new sounds and practice. Try new words with yourself and your friends, tell stories and show your imagination

I am learning to play. The game develops and meets the natural learning needs of the baby. From swinging rattle to voyeurism and concealing, the game has various forms where you can [pay for essays](#). A child can play and can play with other children, groups, adults

Games encourage adults to communicate with their children in their lives. Adults will support the game by giving them the opportunity to play and knowing when to intervene or not to intervene.

The game gives the child the opportunity to be voluntary. You may think that your child should roll the truck to the ground, but that does not mean that the truck is not as useful as stacked toys.

Play for the children to choose. There are enough toys and activities to choose from, and the children can express themselves

The game gives adults the chance to learn how to play again. One of the most challenging parts of the game is to integrate yourself into it.

Games allow adults to learn the language of their child's body. It is important to know when to integrate with your child's game

The game teaches adults patience and understanding. If you choose to participate in a child's game, please take over and try to keep the ultimate learning objective against their game. Structured adult-led activity has time and place, but do not forget to give the child time to control and determine your own game.

It is fun to play. Learn to play a good role for yourself and other people by satisfying and socializing your children

Games are very important for the development of creativity and imagination as well as the social, emotional, cognitive and physical development of children. Games are important for brain development and certain reasoning abilities. In addition, lack of freedom, spontaneous games may be harmful to developing children. But you and I know this. The future Tom Norquist suggests a relationship between this generation of inventions and their ability to freely play during their growth. He also asked why politicians and educators seem to forget that free, non-systematic games have a major impact on children's education, social skills, and overall intelligence It was.

Board games play an important role in the growth and growth of children. It is an important aspect of brain development as it acquires logical and speculative skills, enhances critical thinking, and helps to obtain spatial reasoning. Playing board games also helps learning, socializing and communication skills. It enhances your child's attention and interest, helps you concentrate your child and concentrate longer. Many board games require the basic athletic ability of the body who likes to pick and move objects. They are used as physical therapy for trauma, to acquire function, to

help adjust and improve muscle and nerve function. Regular exercises help to improve motor skills and basic functions. And it is important for children, disabled people and the elderly.
